It is the union of all these parts which forms the perfect orator; and it is easy to perceive how difficult and extraordinary it is for one man to possess so many different qualities. The enumeration, which we shall soon make of the ancient Greek and Latin orators, will show us some, who have confined themselves with success to the two latter kinds, but very few who have been able to attain to the sublime, and still fewer who have succeeded in all three at the same time. What renders success in this respect so difficult and extraordinary, is that the excellent qualities which form the three kinds of style, have each a defect, that borders very close upon them, which adorns itself with their name, which does indeed resemble them in some measure, but at the same time alters and vitiates them, by carrying them too far, by making simplicity degenerate into meanness, ornament into tinsel and glare, and the great and sublime into empty swell and bombast. For it is in style, as in virtue. There are in the one and the other certain bounds and modifications to be observed, beyond which lie the vicious extremes.

Est modus in rebus, sunt certi denique fines,
Quos ultra citraque nequit consistere rectum. *Hor.*

Extremes the more to be feared, as they seem to spring from virtue itself, and confound themselves with it. The Greeks call this excess *κατάφασος*, vicious affectation.⁵ It appears in the three kinds of style, when they exceed the bounds of the just and the true, when the imagination throws off the guidance of the judgment, and the mind is dazzled with a false appearance of the good: this, in respect of eloquence, is the greatest and most dangerous of faults, because, instead of being avoided like others, the phantom is pursued as merit. There is also one virtue common to all the three kinds of style, with which I shall conclude.⁶ Among orators, and the same may be said of historians, poets, and all writers, there are an infinite variety of styles, geniuses, and characters, which occasions so great a difference between them, that scarce one can be found, who perfectly resembles another. There is, however, a kind of secret resemblance and common tie between them, which makes them approach, and unites them with each other. I mean a certain delicacy and refinement of taste, a kind of tincture of the true and the fine, a manner of thinking and expressing themselves, of which nature itself is the source; in fine, a something which it is easier to conceive than express, by which a reader of taste and sense discerns the works both ancient and modern, that bear the stamp of pure and elegant antiquity. And this is what young persons, who desire to make any progress in polite learning, ought to make the principal object of their care and application; I mean, to study in the works of the learned those natural beauties, which are the growth of all ages and all languages, and to make themselves familiar with them by a serious and repeated intercourse with the authors, wherein they are to be found, in order to attain so happy a taste as to discern them at first sight, and, if I may venture the expression, to perceive them like fragrant odours almost by the scent.

ARTICLE I.

OF THE GREEK ORATORS.

SECTION I.—AGE IN WHICH ELOQUENCE FLOURISHED MOST AT ATHENS.

GREECE, so fertile in fine geniuses for all the other arts, was a long time barren in respect to eloquence.

¹ Κατάφασος, id est mala affectatio, per omne dicendi genus peccat.—Ita vocatur, quicquid est ultra virtutem quædam ingenium iudicio caret, et specie boni fallitur: omnium in eloquentia vitiorum pessimum, nam cetera cum vitentur, hoc petitur. *Quintil.* l. viii. c. 3.

⁶ Habet omnis eloquentia aliquid commune. *Quintil.* l. x. c. 2.

¹ Grandiloqui [quidam] ut ita dicam fuerunt, cum ampla et sententiarum gravitate, et majestate verborum; vehementes, varii, copiosi, graves, ad permovendos et convertendos animos instructi et parati. *Cic. in Orat.* n. 20.

At ille qui saxa devolvat, et pontem indigneitur, et ripas sibi faciat, multus et torrens iudicem vel nentem contraheret, cogetque ire qua rapit. *Quintil.* l. xii. c. 10.

² Contrā [sunt quidam] tenuis, acuti, omnia docentes, et dilectiora non ampliora luculentis, subtili quodam et pressa oratione linunt.—Alii in eadem jejunitate concinniores, id est facili, fluentes etiam, et leviter orati. *Orat.* n. 20.

³ Est autem quidam interiectus, melius et quasi temperatus, nec acutior posteriorum, nec fulminis utens superiorum: vicinus amborum, in neutro excellens; utriusque particeps, vel utriusque (si verum querimus) potius experta. *Orat.* n. 21.

⁴ Medius hic modus et translationibus crebrior, et figuris est: iucundior; egressionibus animosus, compositione aptus, sententis dulcis: lenior tamen, ut animis lucidus quidam, et virentibus utranque sylvis inumbratus. *Quintil.* l. xii. c. 10.

⁵ Tertius est amplius, copiosus, gravis, ornatius, in quo profecto vis maxima est. Hic est enim, cuius ornatum dicendi et copiam admirate gentes, eloquentium in civitatibus plurimum valere passus sunt: sed hanc eloquentiam, que cursu magno audente ferretur, quam auspicant omnes, quam admirantur, quam se asequi posse didicerunt. Huius eloquentie est tractare animos, huius omni modo permovere. Hanc modò perfringit, modò irrepit in sensus: inserit novas opiniones, evellit insitias. *Orat.* n. 27.

and, before Pericles, may in some measure be said to have only spoken like an infant, and that till then she had but a small idea, and set little value upon the talent of speaking.¹ It was at Athens that eloquence began first to appear with splendour. And it is not surprising that it was not in honour there, till after many ages. Eloquence does not usually grow up amidst the cares that are necessary in founding a state, and the tumult of wars. She is the friend of peace, and the companion of tranquillity, and requires, if I may venture the expression, for her cradle a commonwealth already well established and flourishing. But what ought to appear surprising, is, that eloquence, almost in her birth, and from her first appearance, (which Cicero dates in the time of Pericles) should on a sudden attain to such a height of perfection.² Before Pericles there was no work or discourse in which any trace of beauty or ornament appeared, or which expressed the orator; and his harangues displayed even then whatever is finest, most vigorous, and most sublime in eloquence.³

Pericles, whose view was to render himself powerful in the republic, and to sway in the assemblies of the people, considered eloquence as the most necessary means for the attainment of these ends, and devoted himself wholly to it. The natural excellency of his genius supplied him with whatever was wanting for his success, and the great application he had before made to philosophy under Anaxagoras, had taught him by what springs the human heart was to be moved and actuated at will.⁴ He employed with wonderful art sometimes the charms of insinuation to persuade, and sometimes the force of vehement passions to oppose and subdue. Athens, who saw a new light shine out in her bosom, charmed with the graces and sublimity of his discourse, admired and feared his eloquence.⁵ It is observed, that, at the very time he opposed the passions of the people with a kind of inflexible obstinacy, he knew how to please them, and had the address to bring them over insensibly to his opinion.⁶ The comic poets accordingly, in their satires upon him (for at that time they did not spare the most powerful) said to his praise on one side, that the goddess of persuasion with all her charms dwelt on his lips; and on the other, that his discourse had the vehemence of thunder, and that it always left behind it a kind of stimulation in the souls of his hearers.⁷ By this extraordinary talent of speaking, Pericles held during forty years, as well in war as peace, an entire authority over the most inconstant and capricious, and at the same time the most jealous people of their liberty in the world, whose discouragement in disgrace it was

sometimes necessary to remove, as it was sometimes to abate their pride, and to check their rashness in success.⁸ Hence we may judge of the power and value of eloquence.

Though Pericles left no piece of eloquence behind him, he however deserves to be ranked at the head of the Greek orators; and the more so, according to Cicero,⁹ because it was he who first taught Athens a taste for sound and perfect eloquence, placed it in honour, showed its true use and destination, and made its salutary effects evident by the success which attended his harangues.

I proceed now to speak of the ten Athenian orators, of whose lives Plutarch has given us an abridgment, and shall treat only of those, who are most known, with some extent.

OF THE TEN GREEK ORATORS.

ANTIPHON.

ANTIPHON improved himself very much in his conversations with Socrates.¹⁰ He taught rhetoric; he also composed pleadings for such as had occasion for them, and is believed to have been the first that introduced that custom. His invention was warm and abundant, his style exact, his proofs strong, and he had a great felicity in answering unforeseen objections. He was no less successful in moving the passions, and in giving the persons he introduced speaking their just and peculiar characters. He was condemned to die for having favoured the establishment of the Four Hundred at Athens.

ANDOCIDES.

ANDOCIDES was also the contemporary of Socrates. He began to flourish twenty years before Lysias.¹¹ He was brought to a trial as an accomplice, in throwing down the statues of Mercury, which were all either thrown down or mutilated in one night in the beginning of the Peloponnesian war. He could extricate himself from this danger only by promising to discover the guilty, in which number he included his own father, whose life however he saved. His style was simple, and almost entirely void of figures and ornaments.

LYSIAS.

LYSIAS was by origin of Syracuse, but born at Athens.¹² At fifteen years of age, he went to Thurium in Italy with two of his brothers in the new colony sent thither to settle. He continued there till the defeat of the Athenians before Syracuse, and then returned to Athens in the forty-eighth year of his age. He distinguished himself there by his peculiar merit and was always considered as one of the most excellent of the Greek orators, but in the simple and tranquil species of eloquence. Perspicuity, purity, sweetness, and delicacy of style, were his particular attributes. He was, says Cicero, a writer of great subtlety and elegance, in whom Athens might almost boast already of a perfect orator.¹³ Quintilian give us the same idea of him. Lysias, says he, is subtle and elegant, and if it sufficed for an orator to instruct, none were more perfect than he.¹⁴ For he has nothing superfluous, nothing affected in his discourse. His style however resembles more a small and clear stream than a great river.

If Lysias generally confined himself to that simplicity, and as Cicero calls it, leaniness of style,¹⁵ it was

¹ Græcia—omnes artes vetustiores habet, et multo antè non inventas solum, sed etiam perfectas, quam est à Græcia elaborato via dicendi atque copia. In quam cùm intueor, maxime mihi occurrunt, Attica, et quasi lucens Athenæ, tuæ, quæ in urbe primùm se orator extulit.—Non in constitutibus Remp. nec in bella gerentibus—nasci cupiditas dicendi solet. Pacis est comes, otiiq; sociæ, et jam bene constitutæ civitatibus quasi alumna quedam eloquentia. Cic. in Brut. n. 26, et 45.

² Hæc utas prima Athenis oratorem prope perfectum tulit. Cic. in Brut. n. 45.

³ Ante Periclem—litera nulla est, quæ quidem ornatum aliquem habeat, et oratoris esse videatur. Ibid. n. 27.

⁴ In Phædro Platonis [page 270], hinc Periclem præstitisse ceteris dicti oratoribus Socrates, quòd in Anaxagore Physici fuerit auditor; à quo enast enim, cùm alia præclara quædam et magnifica didicisset, uberem et fecundum fuisse, quænamque (quod est eloquentiæ maximum) quibus orationis mater quæque animorum partes pellerentur. Cic. in Brut. n. 15.

⁵ Hujus suavitate maximè ex hilaratæ sunt Athenæ, hujus ubertatem et copiam admiratæ; ejusdem vim dicendi terrorumque timerunt. In Brut. n. 44.

⁶ Quid Pericles? de cujus dicendi copia sic accipimus, ut, cùm contra voluntatem Atheniensium loqueretur pro salute patriæ, severius tamen id ipsis, quod ille contra popularis hominis diceret, populare omnibus et jucundum videretur. Cujus in labris veteres comici, etiam cùm illi male dicerent (quod tum Athenis fieri licebat) leporem habitasse dixerunt; tantæque in eo vim fuisse, ut in eorum mentibus qui audierant quasi aculeos quosdam relinqueret. De Orat. l. iii. n. 138.

⁷ Ab Aristophane poëta fulgurare, tonare, permiscere Græcism dictus est. Orat. n. 28.

⁸ Ἡρώδης, ἱστορικὸς, ὑπερβολὰ τὴν Ἑλλάδα.

⁹ Itaque hic doctrina, consilii, eloquentia excellens, quadraginta annos præfuit Athenis, et ut ait eodem tempore et bellicis rebus. Ibid.

¹⁰ Pericles primus adhibuit doctrinam, &c. In Brut. n. 44.

¹¹ Plut. de vit. decem Rhet.

¹² Dionys. Halic. in Lys.

¹³ Fuit Lysias—egregiè subtilis atque elegans, quem jam prope audeas oratorem perfectum dicere. Cic. in Brut. n. 35.

¹⁴ Lysias subtilis atque elegans, et quo nihil, si oratori satis sit docere, querat perfectius. Nihil enim est inane, nihil accersitum: puro tamen fonti, quam magno flumini, propior. Quintil. l. x. c. 1.

¹⁵ In Lysia sunt æque etiam lacerti, sic ut nihil fieri possit valentius: verùm est certè genero toto strigosior. Brut. n. 64.

not because he was absolutely incapable of force and greatness: for according to the same Cicero, there were very strong and nervous passages in his harangues. He wrote in that manner through choice and judgment.¹ He did not plead at the bar himself, but composed pleadings for others; and to suit their character, was often obliged to use a simple style with little or no elevation; without which those native graces which were admirable in him had been lost, and he had betrayed the secret himself. It was therefore necessary that his discourses, which he did not pronounce himself, should have a natural and negligent air, that requires great art, and is one of the most refined secrets of composition. In this manner the law for accused persons to plead their own causes without the help of advocates was eluded.

When Socrates was summoned before the judges to answer for his opinions concerning religion, Lysias, brought him a speech, which he had composed with great care, and in which he had undoubtedly introduced whatever was capable of moving the judges.² Socrates, after having read it, told him, that he thought it very fine and oratorical, but not consistent with the resolution and fortitude that became a philosopher.³

Dionysius of Halicarnassus describes at large, and with much taste and judgment, the character of Lysias's style, of which he enumerates the constituent parts, that are all of the simple and natural kind of eloquence I have spoken of. He even repeats some passages in one of his harangues, the better to make known his style.

ISOCRATES.

ISOCRATES was the son of Theodorus the Athenian, who having enriched himself by making musical instruments, was in a condition to give his children a good education: for he had two more sons and one daughter. Isocrates came into the world about the 36th Olympiad, A. M. 3568, Ant. J.C. 436, twenty-two years after Lysias, and seven before Plato. He had an excellent education under Prodicus, Gorgias, Tisias, and, according to some, Theramenes, that is to say, all the most famous rhetoricians of these times. His inclination would have led him to follow the usual course of the young Athenians, and to have shared in the public affairs: but the weakness of his voice, and his almost insurmountable timidity, not permitting him to venture appearing in public, he directed his views a different way. He did not however entirely renounce either the glory of eloquence, or the desire of rendering himself useful to the public, which were his ruling passions; and what the natural impediment of his voice denied him, he conceived thoughts of attaining by the help of his industry and pen. Accordingly he applied himself diligently to composition, and did not, like the generality of the sophists, make chimerical and useless questions, or subjects of mere curiosity, the objects of his application, but solid and important topics of government, which might be of use to states, and even princes as well as private persons, and at the same time do honour to himself by the graces he should endeavour to diffuse throughout his writings. Isocrates himself informs us in the exordium of his discourse, that these were his views.⁴ He exercised himself also in composing pleadings for such as had occasion for them, according to the custom general enough in these times, though contrary to the laws, which, as I have observed before, ordained that persons should defend themselves without using the help of others. But as these pleadings drew trouble upon himself in consequence of the violation of the law, and obliged him to appear often before the judges, he renounced them entirely, and opened a school for the instruction of youth in eloquence.

¹ Illud in Lysia dicendi textum tenue atque rarum litterarum numeris corruptum non erat. Perdidisset enim orationem, que in eo maxima est, simplicitas atque inaffectatus coloris: perdidisset fidem quoque. Nam scribitur alijs, non ipso dicebat: ut oportuerit esse illa rudibus et Incompositis similia, quod ipsum compositio est. *Quintil.* l. ix. c. 4.

² Lib. i. de Orat. n. 231.

³ Illam orationem Isocrates sibi et oratoriam videri, for tem et virilem non videri.

⁴ In Panathen.

By this new application, the house of Isocrates became in respect to Greece in general, a fruitful nursery of great men, and, like the Trojan horse, none came out of it but illustrious persons.⁵ Though he did not appear in public at the bar, and confined himself within the walls of his school or study, he acquired a reputation to which none after him could attain, and was equally esteemed for the excellence of his compositions, and his art of teaching, as his writings and pupils sufficiently proved. He had a wonderful capacity in discerning the force, genius and character of his scholars, and in knowing how to exercise and direct their talents: a rare, but absolutely necessary quality⁶ for succeeding in the important employment of instruction. Isocrates, in speaking of two of his most illustrious disciples, used to say, that in regard to Ephorus he used the spur, and to Theopompus the bridle, in order to quicken the slowness of the one, and check the too great vivacity of the other. The latter, in composing, gave loose to his fire and imagination, and exhausted himself in bold and glowing expressions: him he curbed. The other, on the contrary, who was timid and reserved, regarded nothing but a rigid correctness, and never dared to venture the least excursion: to him he recommended soaring, and the flights of imagination. His design was not to make them like each other: but by retrenching from the one, and adding to the other, to conduct each to the highest point of perfection of which his genius was susceptible.

Isocrates's school was of great use to the public, and at the same time of great gain to himself.⁷ He acquired more money in it than any sophist had ever done before him. He had generally more than an hundred scholars at five hundred drachmas (about twenty-five pounds) each, in all probability for the whole time of their studying under him. For the honour of so great a master, I should be sorry if what is said of him in respect to Demosthenes were true, that he would not instruct him because he was not able to pay the usual price. I choose rather to hold what Plutarch tells us in the same place, that Isocrates took nothing of the citizens of Athens, and only of strangers. So generous and disinterested a conduct suits much better with his character, and the excellent principles of morality diffused throughout all his works.

Besides his income from his school, he received great presents from considerable persons. Nicocles king of Cyprus, and son of Evagoras, gave him twenty talents (about five thousand pounds) for the discourse inscribed with his name.

A very sensible saying of Isocrates is related.⁸ He was at table with Nicocreon king of Cyprus, and was pressed to talk, and supply matter for conversation. He persisted in excusing himself, and gave this reason for his refusal: "What I do know, does not suit this place; and what would suit it, I do not know." This thought is very like that of Seneca: "I never desired to please the people: for they do not approve what I know, and I do not know what they approve."⁹

Isocrates upon the news of the defeat of the Athenians by Philip at the battle of Charonea, could not survive the misfortune of his country, and died of grief,

⁵ Exiit igitur Isocrates:—(cujus domus cuncte Græciæ quasi ludus quidam passus atque officina dicendi) magnus orator et perfectus magister, quinquam forensi luce caruit, intraque parietes alius cum gloriâ, quam nemo quidem meo iudicio, est postea consecutus. *Cic. in Brut.* n. 32.

⁶ Ex Isocratis ludo, tanquam ex equo Trojano, innumeri principes exierunt. *Lib. ii. de Orat.* n. 34.

⁷ Clarissimus ille præceptor Isocrates, quem non magis libri bene dixisse, quam discipuli bene docuisse testantur *Quintil.* l. i. c. 9.

⁸ Diligentissime hoc est eis, qui instituunt aliquos atque erudiant, videndum, quò sua quæque natura maxime ferre videatur.—Dicebat Isocrates, doctor singularis, se calculibus in Ephoro, contra autem in Theopompo firmitas uti solebat. Alterum enim exultantem verborum audacia, reprimbat, alterum cantantem et quasi verecundantem incitabat. Neque eus similes effecit inter se, sed tantum alteri affluxit, de altero limavit, ut id conformaret in utroque, quod utriusque natura pertineret. *Lib. iii. de Orat.* n. 36.

⁹ Plut. de decem Orat. Gr. in Isocr.

⁹ Plut. *ibid.*

⁹ Nunquam volui populo placere: nam, qui ego scio, non probat; quæ probat populus ego nescio. *Senec. Ep.* 29.

after having continued four days without eating.¹ He was then fourscore and eighteen, or an hundred years old.

It is hard to describe the style of Isocrates better than Cicero and Quintilian have done it: I shall cite their own words. Cicero, after having related the favourable idea which Socrates had conceived of Isocrates while very young, and Plato's magnificent praise of him when very old, though he seems the declared enemy of the rhetoricians, goes on thus describing his style.² "Dulce igitur orationis genus, et solum, et effluens, sententiis argutum, verbis sonans, est in illo epidictico genere, quod diximus proprium Sophistarum, pompæ quam pugne aptius, gymnasiis et palæstræ dicatum, spretum et pulsum foro." "This kind of eloquence is smooth, agreeable, flowing, and abounds with fine thoughts and harmonious expressions: but it has been excluded the bar, and transferred to the academies, as more proper for preparatory exercises, than real affairs." The following is Quintilian's picture of it, and seems to have been copied from the former.³ "Isocrates in diverso genere dicendi [he had just before spoke of Lysias] nitidus et comptus, et palæstræ quam pugne magis accommodatus, omnes dicendi videres secutus est. Nec immerito, auditoris enim se, non iudicis comparat: in inventione facilis, honesti studiosus, in compositione adeo diligens, ut cura ejus reprehendatur."

Lysias and Isocrates resembled each other very much in many points, as Dionysius Halicarnassensis shows at large: but the style of the latter is more smooth, flowing, elegant, florid, and adorned; his thoughts are more lively and delicate, with a disposition of words extremely laboured, and perhaps to excess. In a word, all the beauties and graces of eloquence, used by the sophists in the demonstrative kind, are displayed in his discourses, not designed for action and the bar, but pomp and ostentation.

Cicero in many parts of his books *de Republica*, strongly insists that Isocrates was, properly speaking, the first that introduced into the Greek tongue, number, sweetness, and harmony, which before him were little known, and almost generally neglected.

It remains for me to explain one more quality of Isocrates, his love of virtue and good in general, which Quintilian expresses, *honesti studiosus*, and which, according to Dionysius Halicarnassensis, infinitely exalts him above all the other orators. He runs over his principal discourses to show, that they have no other tendency but to inspire states, princes, and even private persons, with sentiments of probity, honour, fidelity, moderation, justice, love of the public good, zeal for the preservation of liberty, respect for the sanctity of oaths, the faith of treaties, and for all that relates in any manner to religion. He advises all those, who have the government of states, and the administration of public affairs, confided to their care, to read and study these admirable books with singular attention, which contain all the principles of true and salutary policy.

ISÆUS.

ISÆUS was of Chalcis in Eubœa. He went to Athens,⁴ and was the pupil of Lysias, whose style he imitated so well, that in reading their discourses it was hard to distinguish the one from the other. He began to appear with splendour after the Peloponnesian war, and lived to the time of Philip. He was Demosthenes's master, who gave him the preference to Isocrates, because the eloquence of Isæus was stronger, and more vehement than the other's, and for that reason suited better the warm and vigorous genius of Demosthenes.⁵

LYCURGUS.

LYCURGUS was highly esteemed at Athens for his eloquence, and still more for his probity. Several important employments were conferred upon him, in which he always acquitted himself with success. The civil government of Athens was confided to his care,

during which he made so severe a war upon malefactors, that he obliged them all to quit the city. He passed for a severe and inexorable judge, to which Cicero alludes in his letter to his friend Atticus. *Nosmetipsi, qui Lycurgei à principio fuissimus, quotidie demilgamur.*⁶

Lycurgus was appointed questor, or receiver general of the revenues of the commonwealth, at three different times, and exercised that function during fifteen years. In that time fourteen thousand talents (about two millions sterling) passed through his hands, of which he gave an exact account. Before him the revenues of the city amounted only to sixty talents, and he augmented them to twelve hundred, (about three hundred thousand pounds.)⁷ It was this questor, who seeing one of the farmers of the revenue carrying the philosopher Xenocrates to prison, because he had not paid a certain tribute as a stranger at the time, took him from the officers, and made them carry the farmer thither in his stead, for having had the insolence and cruelty to treat a man of learning in that manner. That action was universally applauded. Lycurgus was one of the orators demanded by Alexander of the Athenians, to which they could not consent.

ÆSCHINES. DEMOSTHENES.

I HAVE related at large elsewhere⁸ the history of these two celebrated orators, who were always each other's rival, and whose disputes did not cease till the banishment of Æschines. I have also treated of their style and eloquence in the same place; and as I have nothing to add to what I have said in respect to them, I shall content myself here with setting before the reader their pictures as drawn by Quintilian.⁹ "Sequitur oratorum ingens manus, cum decem simul Athenis ætas una tulerit; quorum longè princeps Demosthenes, ac penè lex orandi fuit: tanta vis in eo, tam densa omnia, ita quibusdam nervis intenta sunt,¹⁰ tam nihil otiosum, est dicendi modus ut nec quid desit in eo, nec quid redundet, invenias. Plenior Æschines, et magis fusus, et grandiori similis, quo minus strictus est; carnis tamen plus habet, laceratorum minus." "An infinite number of orators follow, for Athens had ten at one and the same time; at the head of these was Demosthenes, who far surpassed them all, and who deserves to be considered almost as the rule and standard of eloquence. His style is so strong, his sense so close and so impressive, and every thing so just, so proper, and exact, that nothing can be added or retrenched from him. Æschines is more abundant and diffuse. He seems greater, because more loose, and less collected in himself; he has, however, only more flesh with less nerves."

HYPERIDES.

HYPERIDES had been at first the hearer and disciple of Plato. He afterwards applied himself to the bar, where his eloquence was admired.¹¹ His style had much sweetness and delicacy, but was fit only for small causes.¹² He was joined with Lycurgus in the administration of the public affairs, when Alexander attacked the Greeks, and always declared openly against that prince. After the loss of the battle of Cranon, the Athenians being upon the point of delivering him up to Antipater, he fled to Ægina, and thence took refuge in a temple of Neptune, where he was taken by force, and carried to Antipater at Corinth, who put him to the most cruel tortures, in order to draw from him some secrets and discoveries

¹ Ad. Attic. Ep. xiii. l. 1.

² This would be a very small revenue for such a city as Athens, and the augmentation surprisingly considerable; wherefore I do not know whether ἱξξξξξξξ, six hundred may not be read instead of ἱξξξξξξξ, sixty.

³ See vol. i. p. 511, &c.

¹⁰ Lib. x. c. 1.

¹¹ The metaphor here is not taken from the nerves of the body, but the strings of a bow, which, being drawn to the utmost, discharge the arrows with extraordinary force and impetuosity.

he wanted to know. But, lest the violence of the pain should force him to betray his friends and country, he bit off his tongue with his teeth, and expired in the torments.

DINARCHUS.

DINARCHUS, according to some, was a native of Corinth, and came to settle at Athens when Alexander was pursuing his conquests in Asia.¹ He was the disciple of Theophrastus, who had succeeded Aristotle in his school, and contracted a particular intimacy with Demetrius Phalereus. He did not plead himself, but composed pleadings for those who had occasion for them. He made Hyperides his model, or rather, according to others, Demosthenes, whose animated and vehement style suited his genius better.

CHANGE OF ELOQUENCE AMONG THE GREEKS.

THE space of time between Pericles and Demetrius Phalereus, of whom we are going to speak, was the golden age of eloquence among the Greeks; and included about an hundred and thirty years. Before Pericles, Greece had produced abundance of great men for government, policy, and war; besides numbers of excellent philosophers: but eloquence was very little known there. It was he, as I have already observed, who first placed it in honour, who demonstrated its force and power, and introduced the taste for it. This taste was not common to all Greece. Is there any mention in those times of any Argive, Corinthian, or Theban orator? It confined itself to Athens, that in the interval of which I am speaking, produced the great number of illustrious orators, whose merit has done it so much honour, and has rendered its reputation immortal. All that time may be called the reign of solid and true eloquence, which neither knows nor admits of any other ornament, but natural beauty without paint. "*Hæc ætas effudit hanc copiam; et, ut opinio uera fert, succus ille et sanguis incorruptus usque ad hanc ætatem oratorum fuit, in quo naturalis inesset non fucatus nitor.*"²

As long as Greece proposed to herself these great orators for models, and imitated them with fidelity, the taste for sound eloquence, that is, the manly and the solid, subsisted in all its purity. But, after their deaths, when she began insensibly to lose sight of them, and to follow different tracks, an eloquence of a new kind, more set off and embellished, succeeded the ancient, and soon made it disappear. Demetrius Phalereus occasioned this change; of whom it remains for me to speak.

DEMETRIUS PHALEREUS.

DEMETRIUS was surnamed *Phalereus* from Phalera, one of the ports of Athens, where he was born. The celebrated Theophrastus was his master.

I shall not repeat his history in this place, which is related with sufficient extent elsewhere.³ The reader may see there, that Cassander, having made himself master of Athens some time after the death of Alexander the Great, confided the government of it to Demetrius, who retained it ten years, and acted with so much wisdom, that the people erected three hundred and sixty statues in honour of him; in what manner they were afterwards thrown down, and he himself obliged to retire into Egypt, where Ptolemy Soter received him with great kindness: and lastly, his imprisonment in the reign of Ptolemy Philadelphus, where he died by the bite of an asp.

I consider Demetrius Phalereus here only as an orator, and am to show in what manner he contributed to the decline and destruction of eloquence at Athens.

I have already said that he had been the disciple of Theophrastus, so called from his excellent and divine manner of speaking. He had acquired under him a florid and elegant style, abounding with ornaments, and had exercised himself in that kind of eloquence, which is called the *temperate* or *mediate*, which keeps the mean betwixt the sublime and simple; admits all the ornaments of art; employs the shin-

ing graces of elocution, and the glitter of thoughts; in a word, which abounds with the sweet and agreeable, but is void of force and energy, and with all its glow and embellishment rises no higher than mediocrity. Demetrius excelled in this manner of writing, which is highly capable of pleasing and exciting admiration of itself, if not compared with the sublime kind, the solid and majestic beauty of which makes the faint lustre of its slight and superficial charms appear like nothing. It was easy to perceive from his flowing, sweet, agreeable style, that he had been the scholar of Theophrastus.⁴ His shining expressions, and happy metaphors, says Cicero, were a kind of stars, that glittered in his discourse, and made it luminous.

The mind is generally apt enough to be dazzled by this kind of eloquence, which deceives the judgment by pleasing the imagination. And this happened now at Athens, where Demetrius⁵ was the first who struck at the ancient solid taste, and began the corruption of eloquence. His sole view in speaking to the people was to please them. He was for showing the mildness and benevolence of his disposition, which indeed was his character: but the smooth terms and accent in which he conveyed it, tickled the ears of his auditors without going farther, and only left behind it a pleasing remembrance of a sweet and harmonious disposition of studied words and thoughts. It was not like the victorious eloquence of Pericles, which, whilst it abounded with charms, was armed with thunders and lightning, and left in the mind of the hearer, not only a sense of pleasure and delight, but a lively impression, a kind of resistless impulse, that reached and engrossed the heart.

This showy eloquence may sometimes be applicable on occasions of pomp and splendour, in which no other ends are proposed, but to please the auditors, and to display wit, as in the case of panegyrics, provided, however, that wise restrictions be observed, and the liberty allowed to this kind of discourse be kept within just bounds. Perhaps also this species of eloquence would have been less dangerous, if it had been confined to the private assemblies of the rhetoricians and sophists, who admitted only an inconsiderable number of hearers. But that of Demetrius had a far more ample theatre. It appeared before the whole people; so that his manner of speaking, if applauded, as it always was, became the rule of the public taste. No other language was heard at the bar; and the schools of rhetoric were obliged to conform to it. All declamations, which were their principal exercise, and of which the invention is ascribed to our Demetrius, were formed upon the same plan. In proposing his style to themselves, they did not keep within the bounds he had observed: for he was excellent in parts, and merited praise in many things. But as for them, elocution, thoughts, figures, every thing, as is usual, was strained, and carried to excess. This bad taste made its way with rapidity into the provinces, where it still grew much more corrupt. As soon as eloquence had quitted the Piræus in this condition, and dispersed itself into the islands, and over Asia, it lost that Attic health and vigour it had preserved so long at home, assumed the manners of strangers and almost unlearned to speak;⁶ so great and precipitate was its decline. We have this description of it from Cicero.

The ruin of liberty at Athens partly conducted to

¹ Orator parum vehemens, dulcis tamen, ut Theophrasti discipulum agnosceres. *Offic.* l. i. n. 3.

² Cujus oratio cum sedatè placideque loquatur, tum illustrant eam quasi stellæ quedam traelata verba atque immutata. *Orat.* n. 92.

³ Hic primus inflexit orationem, et eam mollem teneramque reddidit: et suavis, sicut fuit, videri maluit, quam gravis; sed suavitatem ea, qua perfunderet animos, non qua perfringeret; et tantum ut memoriam concinnitatis sue, non (quemadmodum de Pericle scripsit Eupolis) eum delectationis aculeos etiam relinqueret in animis eorum, à quibus esset auditus. *Brut.* n. 28.

⁴ Ut semel à Piræo eloquentia evecta esset, omnes peragravit insulas, atque peragrata tota Asia est, at se exteriora oblineret moribus, omneque illam salubritatem Attici dictionis quasi sanitatem perderet, ac loqui pene dedideret. *Brut.* n. 51.

hasten that of eloquence. The great men, who had done it so much honour by the talent of speaking, appeared there no more. Only some rhetoricians and sophists, dispersed in the several parts of Greece and Asia, supported in some small degree its ancient reputation. I have spoken of them elsewhere.

But, what is most surprising, some ages after, eloquence resumed new force, and appeared again with almost as much splendour as of old at Athens. It is plain that I mean those happy times in which the Greek fathers made so laudable and holy a use of this talent. For I am not afraid to compare St. Basil, St. Gregory Nazianzen, St. Chrysostom, and some others, with the most celebrated orators of Athens. I have inserted several extracts from them in the second volume of the treatise upon study, especially from St. Chrysostom, which in my opinion are not inferior to the orations of Demosthenes, either in beauty of style, solidity of argument, greatness of matter, or force and vehemence of passions. The reader may consult these passages, which renders unnecessary my giving new proofs of what I advance here; and I believe he will agree with me, that there is nothing finer or more eloquent to be found in all the writings of ancient Greece.

We shall soon see that the Latin eloquence had not the same good fortune. As soon as it began to decline, after having shone out with extraordinary lustre for some years, it continually languished, and sunk by degrees sufficiently rapid, till it fell at last into a state of corruption, from which it has never since raised itself. And this is what I am to show in the following article.

ARTICLE II.

OF THE LATIN ORATORS.

ROME, intent at first upon strengthening herself in her new establishment, then upon extending her dominions continually around her, and afterwards on pushing her conquests into remote regions, devoted her whole care and application for many ages to military exercises, and continued during all that time without taste for the arts and sciences, in general, and in particular for eloquence, of which she had hitherto scarce any idea. It was not till after she had subjected the most powerful nations, and established herself in peace and tranquillity, that her commerce with the Greeks began to reform her grossness and kind of barbarity in respect to the exercises of the mind.¹ The Roman youth, who seemed then to awake out of a profound sleep, became sensible of a new species of glory unknown to their ancestors, and began to open their eyes, and conceive a taste for eloquence.

In order to give some idea of the beginning, progress, perfection, and decline of eloquence, I shall divide the Roman orators into four ages; but shall expatiate only upon such of them as are most known either by their works or reputation.

SECTION I.

FIRST AGE OF THE ROMAN ORATORS.

THE Romans, in the arms of peace, the friend of science, and mother of leisure, made at first some efforts for the attainment of eloquence. But as they were entirely ignorant of the means necessary to use for acquiring it, and had no other guide but their own reason and reflections, they made but little progress.² It was necessary to call in conquered Greece to the aid of her victors. As soon as the Grecian rhetoricians had been heard at Rome, had taught there, and

their books began to be read, the Roman youth conceived an incredible ardour for eloquence. We have seen elsewhere³ what difficulties it met with on its first entrance into Rome, and what obstacles it had to surmount in establishing itself there. But it is of the nature of eloquence to conquer opposition, and to force the barriers laid in its way. It succeeded at Rome, notwithstanding the endeavours of Cato, who, though a great orator himself, was against the people's devoting themselves too much to the arts of Greece; and in a short time became the reigning study there. The greatest men afterwards, as Scipio and Lælius, had always learned Greeks about them, from whom they made it their glory to receive lessons.⁴

To proceed to the orators of the first age, the most known are Cato the Censor, the Gracchi, Scipio Æmilianus, and Lælius. They had excellent natural parts, a wonderful fund of wit, great order in their discourse, force in their proofs, solidity in their thoughts, and energy: but neither art, delicacy, grace, care in the arrangement of words, nor knowledge of the numbers and harmony of speech.

Cato had composed an infinite number of orations.⁵ More than an hundred and fifty of them were extant in Cicero's time: but they were not read. He affirms, however, that his eloquence wants only those lively figures, and glowing colours, which were not known in his time.⁶

The Gracchi distinguished themselves also by an eloquence manly and vigorous, but void of ornaments. Cicero has preserved⁷ some lines of a discourse spoke by young Gracchus after his brother's death, which are very lively and pathetic, and which he has imitated himself in the peroration of his defence of Murena. "Quid me miser conferam? quid verum? In capitulinæ? at fratrî sanguine redundat. An domum? matremne ut miseram lamentantemque videam, et abjectam?" "Where shall I go, whither shall I turn myself, miserable as I am? Shall it be to the capitol? but that still reeks with my brother's blood. Shall I go home? what, to behold my mother's sorrow, to hear her mourn, and see her lying inconsolable on the ground?" If the rest of his discourse resembled these few lines, it did not give place in any thing to those of Cicero. In pronouncing them, every thing spoke in him, his eyes, voice, gesture; so that his enemies themselves could not refrain from tears.⁸ Aulus Gellius⁹ has preserved two fragments of the discourse of C. Gracchus, which are not of the same taste with that cited by Cicero. They are elegant, but cold, though the subject is weighty and affecting. It was the same Gracchus who had always a slave behind him with a flute, to give him notice when to raise or lower his voice.

Quintilian frequently opposes the style of the age we speak of to that of his own times, and gives us an excellent precept on that head. "Youth," says he, "have two great faults to shun. The first would be, if, upon the recommendation of any excessive admirer of the ancients, they should study and imitate the orations of Cato, the Gracchi, and the like authors; for that would render their style stiff, dry, and rugged. The opposite fault is, their being charmed with the glittering prettiness, the finery of the soft effeminate style now in fashion, and spoiling their taste by a fondness for a gaudy luscious kind of eloquence, the more dangerous for them, as the more grateful to their age and character. But when their judgment is formed, and they are safe on that side, I would advise them," continues he "to read the ancients, whose strong and manly eloquence, when separated from the rudeness and inelegance of the gross age in which they lived, will sustain, and even exalt, the beauties and ornaments of ours. I would also exhort them to

¹ Postea quàm imperio omnium gentium constituto, diuturnitas pacis otium confirmavit, nemo ferè laudis cupidus adolescens non sibi ad dicendum studio, omni entendum putavit. *Lib. i. de Orat. n. 14.*

² Ac primò quidem totius rationis ignari, qui neque exercitationis ullam viam, neque aliquod præceptum artis esse arbitrantur, tantum, quantum ingenio et cogitatione poterant, consequebantur. ⁹ *Lib. x. c. 3.*

study the moderns attentively, who are excellent in parts, and may be of great use to them." 1

I thought this passage of Quintilian proper in this place for explaining the style of the times in question: besides which, it includes very judicious advice, that the youth of the present age may also apply to their advantage.

I shall not enter into the character of the eloquence of Scipio and Lælius; and assure myself, that, though it savoured of the age they lived in, it was far from the roughness of Cato's and the Gracchi. I shall only relate here a fact highly for the honour of Lælius, and which shows how far he carried his candour and integrity. He had taken upon him the care of a very important cause, and pled it with abundance of eloquence.² The judges however did not think his arguments sufficed to determine their sentence, and referred it to another hearing. Lælius laboured it anew, and pled it a second time, but with the same success as before. Upon which, without farther delay, he obliged his clients to put their cause into the hands of Galba, a famous orator of those times, who was more vehement and pathetic than him. It was not without great difficulty, that he was prevailed upon to undertake it; however he carried it unanimously by his first pleading. "It was then, as in all other things, the better and more humane custom," says Cicero, "to be easy in doing justice to the merit of others, though at one's own expense." "Erat omnino tum mos, ut in reliquis rebus melior, sic in hoc ipso humanior; ut faciles essent in suum cuique tribuendo."

SECTION II.—SECOND AGE OF THE ROMAN ORATORS.

I SHALL place four orators in this second age: Antony and Crassus, more advanced in years; and Cotta and Sulpitius, younger men. They are hardly known by any thing but what Cicero tells us of them in his books of rhetoric. He observes, it was under the two first that the Roman eloquence, having attained a kind of maturity, began to be capable of entering the lists with that of the Greeks.³

Antony,⁴ in his voyage to Cilicia, whither he went as proconsul, stopped for some time at Athens and in the island of Rhodes upon different pretexts, but in reality for the opportunity of conversing with the most able rhetoricians, and in order to improve himself in eloquence by their instructions. He however always affected from that time to appear ignorant of what the Greeks taught respecting the art of speaking, with the view of rendering his eloquence thereby the less suspected.⁵ And he accordingly was generally supposed by his hearers to come to the bar, and to plead his causes, almost without preparations.⁶ But, in reality, he was so well prepared, that the judges were often not enough so in their distrust of him. Nothing for the success of his cause escaped him. He knew how to dispose every proof in the place where it made most impression. He was less attentive to the delicacy and elegance of his terms, than

to their force and energy. He seemed to regard only things in themselves, and right reason: in a word, he had all the great qualities of an orator, and supported them wonderfully by the force and dignity of his utterance.

In the second book of the Orator⁷ he traces the plan himself of an oration which he pronounced in defence of Norbanus, who was justly prosecuted as the author of a sedition: a cause, as it is easy to conceive, of a very tender and difficult nature. He treated it with such art, force, and eloquence, as wrated the criminal from the severity of the judges: and he confesses himself, that he carried his cause less by the strength of reason, than the vehemence of the passions he knew how to introduce with judgment. *Ita magis affectis animis Judicum, quam doctis, tua, Sulpiti, est à nobis tum accusatio victa.* Sulpitius, the advocate on the other side, had notwithstanding left the judges perfectly convinced of the justice of his cause, and highly incensed against Norbanus: *Cum tibi ego, non judicium, sed incendium tradidissem.* Nothing is more capable of forming young pleaders than the plan of this harangue: but they ought not to imitate the use Antony made at that time of his talents for saving a criminal from the punishment he deserved.

Crassus was the only orator that could be ranked with Antony, and some give him the preference to the other.⁸ He was but three years younger than him. His peculiar character was an air of gravity and dignity, which he knew how to temper with an insinuating politeness, and even refined pleasantry and railery, that never forgot the decency of the orator.⁹ His language was pure and correct with elegance, but easy and void of affectation. He explained himself with wonderful clearness, and exalted the beauty of his discourse by the strength of his proofs, and agreeable allusions and similitudes.

When Crassus had to do with persons of merit and reputation, he took care to proceed with tenderness and reserve, and employed no railery in respect to them that could shock or offend; in *quo genere nulli aculei contumeliarum inerant*:—a moderation very extraordinary in those who value themselves upon pleasantry, and who find it very hard to keep in a smart saying when it comes uppermost, and which they think it for their honour to vent.¹⁰ But he behaved differently to such as gave room for it by their bad conduct. One Brutus, of whom I am going to speak, was of this number. He had taken up the business of an accuser for the sake of the rewards granted by the laws to such as convicted criminals: a calling which was looked upon at Rome as highly unworthy of a man of condition and probity, though a young man was approved there for making himself known by accusing some person of importance. This Brutus was universally scandalous as a prodigal who had squandered his estate in excesses and debauchery. Pleading one day against Crassus, he caused two speeches of that orator to be read, in which he had manifestly contradicted himself. Crassus was highly nettled, and knew well how to be even with him. For that purpose he caused three dialogues of Brutus's father to be read also, in each of which, according to a custom common enough, mention was made in the beginning of the country-house, where the conversation was supposed to be held. After having by this method introduced the names and reality, of three estates which his father had left him, he asked him with bitter reproaches what was become of them. An accidental circumstance gave Crassus occasion to treat him in the same cause with a quite different force and vivacity, and to unite the most severe invectives with railery.¹¹ While they were pleading

¹ Duo genera maximè cavenda pueris puto. Unum, ne quis eos antiquitate nimis admirator in Græcorum Catione, et aliorum similium lectione durescere velit: sicut enim horridi et jejuni. — Alterum quod huic diversum est, ne recentis hujus lascivie fosculis capiti, volupate quadam prava delinquant, ut prædilecti illud genus, et puerilibus ingenio hoc gratius, quo propius est, adment. Firmis autem iudiciis, jamque extra periculum positis, assuerim et antiquos legere, ex quibus si assumatur solida ac virilis ingenii vis, deterreo rudis seculi assuolore, tum noster hic cultus claris emittetur: et novos, quibus et ipsi multa virtus adest. *Quintil. l. ii. c. 6.*

¹⁰ Quod est hominibus facetis et dicebilibus difficillimum, habere hominum rationem et temporum, et ea, quæ occurrant, cum falsissime dici possunt, tenere. *2 de Orat. n. 221.*

¹¹ Quis est qui non fateatur, hoc lepore atque iis facetiis non minùs refutatum esse Brutum, quam illis tragædiis.

in the forum, where every body knows all great causes were tried, the funeral procession of a Roman lady passed by, at the head of which, according to the ceremonies practised on such occasions at Rome, the images of her ancestors were carried: she was of the family of the *Junii*, of which that of Brutus was a branch. Upon this unexpected sight, Crassus, as if transported with a sudden enthusiasm, fixing his eyes on Brutus, with the most animated voice and gesture: "Why do you sit, Brutus?" said he, "What news would you have this good old lady carry to your father, and to those great men, whose images you see borne before her? What shall she say of you to your ancestors, and particularly to Lucius Brutus, who delivered this people from the tyranny of kings? What shall she tell them you do? What business, what glory, what virtue shall she say you study? Is it to increase your patrimony? That would not suit your birth; besides, your debauches have entirely eaten up that. Is it the civil law? Your father's example might induce you to it; but of that you do not so much as know the most common principles. Is war your study? No, you never saw a camp. Or eloquence? Of that too you know nothing: and as for the volubility of your tongue and the strength of your lungs, you devote them wholly in this place to the vile and execrable traffic of gain by calumnies. And do you dare to see the sun? To look the judges in the face, to appear at the bar, in the forum, the city, and in the sight of the people? Are you not struck with shame and horror at this procession, that deceased lady and those venerable images, whose glory you dishonour so much by your infamous practices?" A passage like this suffices to show us what we are to judge of the character and merit of Crassus's eloquence.

To this rare talent he added great knowledge of the civil law; in which however Scaevola far exceeded him. He was the most learned civilian, and one of the most celebrated orators of his time. They were both nearly of the same age,¹ had passed through the same dignities, and applied themselves to the same functions and studies. This resemblance, and kind of equality far from exciting the least thought of jealousy, as it often happens, and from making the least change whatsoever in their friendship, only served to improve and augment it.

I shall say only a few words of the two young orators, Cotta and Sulpitius, who at this time made a shining figure at the bar. The character of their eloquence was quite different.

Cotta's invention was penetrating and acute: his elocution pure and flowing.² As the weakness of his lungs obliged him to avoid all violent exertions of

voice, he took care to adapt his style and manner of composing to the infirmity of his organs. Every thing in it was just, neat, and strong. But what was more admirable in him, as he could make no very great use of the vehement and impetuous style, and consequently could not influence the judges by the vigour of his discourse; he had however the address in treating his matter, to produce the same effect upon them by his calm and composed manner, as Sulpitius by his ardent and animated eloquence.

The style of Sulpitius, on the contrary, was lofty vehement,³ and to use the expression, tragical. His voice was strong, sweet, and clear; the gesture and motion of his body extremely graceful and agreeable: but that grace of action suited the bar, not the stage. His discourse was rapid and abundant, but without any vicious redundancy or superfluity. Sulpitius made Crassus his model; Cotta was better pleased with Antony. But the latter had neither Antony's force, nor the former Crassus's pleasantry.

There was a remarkable difference between Cotta and Sulpitius. The latter was cut off in his youth, whereas Cotta lived to an advanced age, was consul, and pled with Hortensius, who was, however, much younger than he.

The example of Cotta and Sulpitius shows, that two orators may both be excellent without resembling each other; and that the important point is to discern aright, to what nature or genius inclines us, and to take her for our guide. These had the good fortune to find two great masters and most friendly guides in Antony and Crassus, who spared no pains, and made it their pleasure, to form them for eloquence.

SECTION III.—THIRD AGE OF THE ROMAN ORATORS.

THIS is the golden age of Roman eloquence, which was of short duration, but shone out with great lustre, and almost equalled Rome with Athens. It produced a great number of excellent orators: Hortensius, Cæsar, who would have been an orator of the first class, if he had been kept to the bar, Brutus, Messala, and many others, who all acquired great reputation among the Romans, though their orations are not come down to us. But Cicero obscures the glory of all the rest, and may be considered as the most perfect model of Roman eloquence that ever appeared in the world. I must desire the reader's permission for referring him to the treatise upon study, where I have expatiated largely upon Cicero, and the character of his eloquence, of which, for that reason, there remains little for me to say.

He was indebted to nature for a happy genius which his father took care to cultivate in a particular manner, under the direction of Crassus, who laid down the plan of his studies.⁴ He had the most able masters of those times at Rome, and went afterwards to Greece and Asia Minor, to learn the precepts of oratory at their source.

His brother Quintus believed that nature alone, with the aid of frequent exercise, sufficed to form the orator.⁵ Cicero was of a very different opinion, and was convinced, that the talent of speaking could only be acquired by a vast extent of erudition. Accordingly, persuaded that without the most tenacious application, and an ardour that rose almost to passion, nothing great could be attained, he devoted himself wholly to laborious study. The fruits of it soon appeared, and from his first showing himself at the bar, he was distinguished by universal applause.

quas egit gaudem, cum causa in eadem causa cum funere effertur ante oculos Junia? Prohi dii immortales! Quæ fuit illa, quanta vis, quam inexpectata, quam repentina! cum, confectis oculis, gestu omni imminente, summa gravitate, et celeritate verborum: Brute, quid sedes? Quid illam animum patri nunciare vis tuos? Quid illis omnibus, quorum imaginibus duci vides? Quid Lucio Bruto, qui hunc populum dominatu regis liberavit? Quid te facere? Cui rei, cui glorie, cui virtuti studere? Patrimonium augendo? At id non est nobilitatis. Sed fac esse. Nihil superest: libidines totum dissipaverunt. An juri civili? Est paternum. Sed, &c.—An rei militari, qui nunquam castris vocis? An eloquentiam, quæ nulla est in te, et quicquid est vocis ac lingue, omne in istum turpissimum calumniam quæstum contulisti? Tu lucem sapientie audes? Tu hos inter? Tu in foro, tu in urbe, tu in civium esse conspectu? Tu illam mortuam, tu imagines ipsas non perhorreo: quibus non modo imitandis, sed ne colloquendis quidem tibi nullum locum reliquisti? Lib. ii. de Orat. n. 223—226.

¹ Illud gaudem, quod et æqualitas vestra, et pares honorum gradus, et artium studiorumque quasi finitima vicinitas, tantum abest ab obstrictatione invidiæ, quæ solet: lacerare plebæ, ut ea non modo non exulcerare vestram gratiam, sed etiam conciliare videatur. Brut. n. 156.

² Inveniebatur igitur acutus Cotta dicebat purè ac solutè: et ut ad infirmitatem laterum perscrutentur contentione omnem remiserat, sic ad virum imbecillitatem dicendi accommodabat genus. Nihil erat in ejus oratione nisi sincerum, nihil nisi sincerum atque sanum: eloquentiam maximum, quod, cum contentione orationis flectere animos Judicium vis posset, nec omnino eo genere diceret, tractando tamen impellebat ut idem flecterent à se commoti, quod à Sulpitio concitati. Brut. n. 162.

³ Fuit enim Sulpitius vel maxime omnium, quos quidem ego audiverim, grandis, et, ut ita dicam, tragicus orator. Vox cum magna, tum suavis et splendida: gestus et motus corporis ita venustus, ut tamen ad forum non ad scenam in stitutus videretur. Inritata et volubilis, nec ac redundans tamen, nec circumfluens oratio. Crassum hic volebat imitari, Cotta malebat Antonium. Sed ab hoc vis aberat Antonii, Crassi ab illo lepos. Ibid. n. 203.

⁴ Lib. ii. de Orat. n. 2.

⁵ Siles nonnunquam hac de re à me in disputationibus multis dissentire, quod ego eruditissimorum hominum artibus eloquentiam contineri statuiam; tu autem illam ab elegantia doctrinæ segregandam putes, et in quodam ingenti atque ex ercitationis genere ponendam. Lib. i. de Orat. n. 5.

He had a fertile, warm, and shining wit; a rich and lively imagination; a polished, florid, abundant, and luxuriant style; which last quality is no fault in a young orator. Every body knows that Cicero, when master of the art, in laying down rules is for having youth display fertility and abundance in their compositions. *Volo se offerat in adolescente fecunditas.* Quintilian² often and strongly recommends to masters, not to expect or require finished and perfect discourses from their disciples. He prefers a bold freedom in their exercises, which grows wanton while it makes efforts, and exceeds the bounds of the exact and the just. It is easy to correct abundance, but there is no curing sterility. Cicero himself cites³ an example of this luxuriant and too florid style from his own defence of Roscius Amerinus, who was accused of parricide. In a great commonplace upon parricide, after having described the punishment established by the Roman laws for such as were convicted of it, which was to sow them up in a leathern bag, with a dog, a cock, a serpent, and an ape, and to throw them into the sea, he adds the following reflection, to show the enormity of the crime by the singularity of the punishment, the choice of which seems to have had in view the excluding of an ungrateful wretch from the use of all nature, who had been so unnatural as to deprive his father of life. "Quid est tam commune quam spiritus vivis, terra mortuis, mare fluctuantibus, litus ejectis? Ita vivunt, dum possunt, ut decedere animam de cælo non queant: ita moriuntur, ut eorum ossa terra non tangat: ita jactantur fluctibus, ut nunquam abluantur: ita postremo ejiciuntur, ut ne ad saxa quidem mortui conquiscant," &c.⁴ "What is there so common as the air we breathe to the living, the earth to the dead, the water to those who go by sea, and the shore to those who are driven by the waves. By the invention of this punishment, these unhappy wretches, during the short time they retain life in it, live without power to respire the air, and die in such a manner, that their bones cannot touch the earth: they are tossed to and fro in the waves, without being washed by them; and are driven against the rocks and shores, so as never to rest or lie still even in death." The whole passage upon the punishment of parricides, and especially that part of it just quoted, was received with extraordinary applause.⁵ But Cicero, some time after, began to perceive, that his commonplace savoured too much of the young man (he was then twenty-seven years old), and that if he had been applauded, it was less from any real beauty in the passage, than the hopes and promise he then gave of his future merit. And indeed this passage has nothing in it but a glitter without solidity, which dazzles for a moment, but will not bear the least serious examination. The thoughts are far-fetched and unnatural, with a studied affectation of antithesis and contrast.

Cicero very much reformed his taste, and after going to Athens, and into Asia Minor, where, notwithstanding his celebrity for pleading, he became the disciple of the learned rhetoricians who taught there, he returned to Rome almost entirely changed from what he was when he left it.⁶ Molo the Rhodian in particular was of great use to him, in teaching him to retrench the superfluity and redundancy, that proceeded from the warmth and vivacity of his years, and in accustoming him to a less diffused style, to keep within just bounds, and to give his discourse more weight and maturity.⁷

The emulation excited in him by the great success of his friend, but rival, Hortensius was of infinite service to him. I have spoken of it elsewhere⁸ with sufficient extent. He seems from that period to have formed the design of carrying from Greece, or at least of disputing with her, the glory of eloquence. He exerted himself in every branch of it courageously, without neglecting one. The simple, the florid, and the sublime styles became equally familiar to him; and he has given us the most finished models in these three species of eloquence. He mentions several places in his treatise *De Oratoribus*, where he had employed these different kinds of style; and ingeniously confesses, that, if he has not attained perfection in them, he has at least attempted and shadowed it.⁹ Nobody knew the heart of man better than he, or succeeded better in moving the springs of it, whether he insinuates into his hearer's favour by the soft and tender passions, or uses those which require bold figures, vehemence, and the strongest and most affecting eloquence.¹⁰ To be convinced of this, the reader has only to consult his perorations. When pleadings were divided, this last part was always left to him, in which he never failed to succeed in a peculiar manner; not, says he, that he had more wit than others, but because he was more moved and affected himself, without which his discourse would not have been capable of moving and affecting the judges.¹¹

It was this admirable union and application of all the different qualities of the orator, that occasioned the rapid success of Cicero's pleadings.¹² He owns himself, that Rome had never seen nor heard any thing of the like nature before; and that this new species of eloquence charmed the hearers, and carried off all suffrages. That of the ancients, as I have observed before, had abundance of solidity, but was entirely void of grace and ornament. Rome, which to their time had neither literature nor delicacy of ear, suffered, and even went so far as to admire them.¹³ Hortensius had begun to throw graces into discourse. But besides his negligence in that respect, at length, from his being contented with, and secure, as he thought, of his reputation the ornaments he used consisted rather in words and turns of phrase than thoughts, and had more elegance than real beauty.

Cicero industriously gave eloquence all the graces of which it was susceptible, but without lessening the solidity and gravity of discourse. He departed a little in this from the method of Demosthenes, who, solely attentive to things in themselves, and not in the least to his own reputation, goes on directly to the end in view, and neglects every thing merely ornamental. Our orator thought¹⁴ himself obliged to comply in some measure with the taste of his times, and the delicacy of the Romans, which required a more pleasing and florid style. He never lost sight of the public utility, but was studious at the same time of pleasing

the judges; and in this he said, he served his country more effectually: for his discourse in being agreeable, was necessarily the more persuasive. This beauty, this charm of style, diffused throughout the orations of Cicero, made him seem to obtain that by gentle means, which he actually seized by force; while the judges, who conceived they did no more than follow him of their own accord, were borne away by *bright illusion* and imperious vehemence.¹ He also enriched Roman eloquence with another advantage, which highly exalted its value: I mean the disposition of words, which conduces infinitely to the beauty of discourse. For the most agreeable and most solid thoughts, if the terms in which they are expressed want arrangement and number, offend the ear, of which the sense is exceedingly delicate.² The Greeks had been almost four hundred years in possession of this kind of beauty in the admirable works of their writers, who had carried the sweetness and harmony of disposition to its highest perfection.³ In another part of this volume I have described the manner in which Cicero gained the Roman language this improvement. As much must be said of all the other parts of eloquence, of which he either gave the Romans the first knowledge, or at least carried them to their highest perfection; and in this Cæsar had reason to say, that Cicero had rendered his country great service.⁴ For by his means Rome, which gave place to Greece only in this kind of glory, deprived her of it, or perhaps, rose to the point of dividing it with her. Cicero in consequence, may truly be said to be in respect to Rome, what Demosthenes had before been to Athens; each on his side having carried eloquence to the highest perfection it ever attained.

SECTION IV.—FOURTH AGE OF THE ROMAN ORATORS.

It is the usual lot of human things, when they have attained their highest perfection, to decline soon, and to degenerate ever after. Eloquence, as well as history and poetry, experienced this sad fatality at Rome. Some few years after the death of Augustus, that region, so fertile of fine works and noble productions, bore no more of those excellent fruits, which had done it so much honour;⁵ and as if it had been universally blasted, that bloom of Roman urbanity, that is to say, the extreme delicacy of taste, which prevailed in all works of genius and learning, withered and disappeared almost on a sudden.

A man highly estimable in other respects for his fine genius, rare talents, and learned works, occasioned this change in eloquence: it is easy to perceive that I mean Seneca. A too great esteem for himself, a kind of jealousy for the great men who had appeared before him, a violent desire of distinguishing himself, and to use the expression, of forming a sect, and being the leader for others to follow, made him quit the usual track, and throw himself into paths that were new and unknown to the ancients.

The best things are abused, and even virtues themselves become vices when carried too far. The graces with which Cicero had embellished and enriched Roman eloquence, were dispensed soberly and with great judgment: but Seneca lavished them without discretion or measure. In the writings of the first, the ornaments were grave, manly, majestic, and proper for exalting the dignity of a queen: in those of the second, one might almost term them the finery of a

courtezan, which, far from adding new lustre to the natural beauty of eloquence, by the profusion of pearls and gems, disguised, and made it disappear. For the soil of Seneca is admirable. No ancient author has either so many, so fine, or so solid thoughts as he. But he spoils them by the turn he gives them, by the antitheses and quibbles with which they are usually larded, by an excessive affectation of ending almost every period with an epigrammatic point, or a kind of glittering thought, a conceit very like it. This made Quintilian say,⁶ it were to be wished that Seneca in composing had used his own genius, but another's judgment. *Felles eum sua ingenio dixisse alieno judicio.* What I have observed of him elsewhere⁷ with great extent, renders unnecessary my saying more of him in this place.

PLINY THE YOUNGER.

THE author, of whom I am going to speak, is one of those persons of antiquity that best deserve to be known. I shall first trace a plan of his life from his own letters, in which we shall find all the qualities of the man of honour and probity, with the most amiable goodness of heart and generosity it is possible to imagine. I shall then proceed to give some idea of his style by extracts from his panegyric upon Trajan, which is the only piece of his eloquence come down to us.

Abridgment of the Life of Pliny the Younger.

PLINY the younger was born at Coma, a city of Italy, A. D. 61. His mother was Pliny the naturalist's sister, who adopted him for his son. Having lost his father very early,⁸ Virginus Rufus, one of the greatest persons of his age, was his guardian, who always considered him as his own son, and took particular care of him. Virginus, whose virtues had rendered him suspected, and even odious to the emperors, had, however, the good fortune to escape their jealousy and hatred. He lived to the age of fourscore and three, always happy and admired. The emperor Trajan caused his obsequies to be solemnized with great magnificence; and Tacitus the historian, who was then consul, pronounced his funeral oration. Pliny was no less happy in masters, than he had been in a guardian. We have seen elsewhere, that he studied rhetoric under Quintilian, and that, of all his disciples, he was the person who did him most honour, and also expressed most gratitude for him. The whole sequel of his life will show the taste he had acquired for polite learning of every kind in the school of that celebrated rhetorician. At the age of fourteen he composed a Greek tragedy.⁹ He exercised himself afterwards in every species of poetry, which he made his amusement. He believed it necessary to hear also Nicetas of Smyrna,¹⁰ a celebrated Greek rhetorician, who was then at Rome. I include Rusticus Arulenus in the number of his masters, who had been tribune of the people in 69, and who professed Stoic philosophy.¹¹ His merit and virtue were crimes under an emperor,¹² who was the declared enemy of both, and occasioned the loss of his life. He had taken particular care to form Pliny for virtue, who always retained the highest gratitude for his memory.

Pliny was sent into Syria, where he served for some years at the head of a legion.¹³ All the leisure his duty afforded him there, he devoted to the lectures and conversations of Euphrates, a famous philosopher who believed then that he saw in Pliny all that he afterwards proved. He gives us a fine picture of that philosopher. His air, says he, is serious, without sourness or ill-nature.¹⁴ His presence inspires respect, but neither fear nor awe. His extreme politeness is equalled only by the purity of his manners. He makes war upon vices, not persons; and reforms such as err, but without insulting them.

On his return to Rome, he attached himself more closely than ever to Pliny the naturalist, who had adopted him, and in whom he had the good fortune to find a father, master, model, and excellent guide. He collected his slightest discourses, and studied all his actions. His uncle, then fifty-six years old, was obliged to repair to the coast of Naples, in order to take upon him the command of the Roman fleet at Misenum. Pliny the younger attended him thither, where he lost him by the unhappy accident I have related elsewhere.

Destitute of that support, he sought no other than his own merit, and applied himself wholly to public affairs. He pled his first cause at nineteen years of age.¹ Young as he was, he spoke before the centumviri in an affair, wherein he was under the necessity of contending with all the persons of the highest credit in Rome, without excepting those whom the prince honoured with his favour.² It was this action that first made him known, and opened the way for the reputation he afterwards acquired.³ He retained from that period an approbation as universal as extraordinary in a city, where neither competitors nor envy were idle. He had more than once the satisfaction of seeing the entrance of the bar entirely shut up by the multitude of hearers, who waited when he was to plead.⁴ He was obliged to go to his place through the tribunal where the judges sat; and sometimes spoke seven hours, on which occasions he himself was the only person tired in the assembly. He never pled but for the public interests, his friends, or those whose ill fortune had left them none.⁵ Most of the other advocates sold their assistance, and to glory, of old the sole reward of so noble an employment, had substituted a sordid traffic of gain. Trajan, to reform that disorder, published a decree,⁶ which, at the same time it gave Pliny great pleasure, did him no less honour. "How pleased I am," said he, "not only never to have entered into any agreement about the causes in which I have been concerned, but to have always refused all kind of presents, and even new-year's gifts, upon account of them! It is true, indeed, that every thing repugnant to honour is to be avoided, not as prohibited, but as infamous.⁷ There is, however, great satisfaction in seeing that prohibited, which one never allowed one's self to do." He made it a pleasure, and even a duty, to assist with his advice, and to bring forward young persons of family and promise to the bar.⁸ He would not undertake some causes, but upon condition of having a young advocate joined with him in them. It was the highest joy to him, to see them begin to distinguish themselves in pleading, by treading in his steps, and following his counsels.⁹ From how good a heart, from what a fund of love for the public, do such sentiments flow!

It was by these steps that Pliny soon rose to the highest dignities of the state. He always retained the virtues in them by which they were acquired. In the time of Domitian he was prætor. That savage prince, who looked upon innocence of manners as a censure of his own conduct, banished all the philosophers from Rome and Italy. Artemidoros, one of Pliny's friends, was of this number, and had withdrawn to a house that he had without the gates of the city.¹⁰ "I went thither to see him," says Pliny, "at a time when my visit was most remarkable and most dangerous. I was prætor.

He could not discharge the debts he had contracted for many noble uses without a great sum of money. Some of the richest and most powerful of his friends would not see the difficulty he was under. As to me, I borrowed the sum, and made him a present of it. I had however great reason to tremble for myself. Seven of my friends had just before either been banished or put to death. Of the latter were Senecio, Rusticus, and Helvidius: the exiles were Mauricus, Grattilla, Arria, and Fannia. The thunder which fell so often, and still smoked around me, seemed evidently to presage the like fate for myself.¹¹ But I am far from believing that I deserve on this account all the glory Artemidoros gives me: I only avoided infamy." Where shall we find now such friends and such sentiments? I admire Pliny's good fortune, worthy man as he was, in escaping the cruelty of Domitian. I could wish that he owed this obligation to his master and friend Quintilian, who had undoubtedly great credit with the emperor, especially after he had charged him with the education of his sister's grandsons. History says nothing upon this head: it only informs us, that an accusation fully prepared against Pliny was found among Domitian's papers.

The bloody death of that emperor, who was succeeded by Nerva, A. D. 96, restored tranquillity to persons of worth, and made the bad tremble in their turn.¹² A famous informer, named Regulus, not satisfied with having fomented the prosecution of Rusticus Arulenus, had besides triumphed over his death, by insulting his memory with writings full of injurious reproaches and insolent ridicule. Never was man so abject, cowardly, and creeping, as this wretch appeared after Domitian's death; which is always the case with such venal prostitutes to iniquity, who have no sense of honour. He was afraid of Pliny's resentment, the declared friend of Rusticus in all times. Besides he had attacked him personally in Domitian's life; and in a public pleading at the bar, had laid a murderous snare for him by an insidious question in respect to a person of worth, whom the emperor had banished, which exposed Pliny to certain danger, had he openly declared the truth, or would have dishonoured him for ever, had he betrayed it. This base wretch left nothing undone to avert Pliny's just revenge, employed the recommendation of his best friends, and came to him at last in person to implore him with the most abject and abandoned submissions to forget the past. Pliny did not think fit to explain himself, being willing, before he determined in the affair, to wait the arrival of Mauricus, the brother of Rusticus, who was not yet returned from banishment. It is not known how the business ended.

Another of the same kind did him much honour.¹³ As soon as Domitian was killed, Pliny, upon mature deliberation, judged the present a very happy occasion for prosecuting the vile, avenging oppressed innocence, and acquiring great glory. He had contracted a particular friendship with Helvidius Priscus, the most virtuous and most revered person of his time, as also with Arria and Fannia, of whom the first was the wife of Pætus Thrasea, and Fannia's mother, and the latter the wife of Priscus. The senator Publicus Cæstus, a man of great power and credit, designed for consul the ensuing year, had urged the death of Helvidius, who was also a senator of consular dignity even in the senate. Pliny undertook to avenge his illustrious friend. Arria and Fannia, who were returned from banishment, joined him in so generous a design. He had never done any thing without the advice of Corellius, whom he considered as the wisest and most able person of the age.¹⁴ But upon this occasion, knowing him to be a man of too timorous and circumspect a prudence, and at the same time, that in resolutions wisely taken,¹⁵ it is not proper to consult persons, whose counsels are a kind of order to the consulter, he did not impart his design to him,

and contented himself with communicating it upon the very day it was to be put in execution, but without asking his opinion. The senate being assembled, Pliny repaired thither, and demanded permission to speak. He began with great applause, but as soon as he had opened the plan of the accusation, and had sufficiently designated the criminal, without naming him however hitherto, the senate rose up against him on all sides. He heard all their outcries without trouble or emotion, while one of his friends of consular dignity intimated to him softly, but in very lively terms, that he had exposed himself with too much courage and to little prudence, and pressed him earnestly to desist from his accusation; adding, at the same time, that he would render himself formidable to succeeding emperors. "So much the better," replied Pliny, "if they are bad ones." They at length proceeded to give their opinions, and the first who spoke, which were the most considerable of the senate, apologized for Certus, as if Pliny had actually named him, though he had not yet done so. Almost all the rest declared in his favour. When it came to Pliny's turn to speak, he treated the subject in all its extent, and replied to every thing that had been advanced. It is not conceivable with what attention and applause, even those who a little before had opposed him, received all he said, so sudden was the change produced either by the importance of the cause, the force of the reasons, or the courage of the accuser. The emperor did not judge it proper that the proceedings should go on. Pliny however carried what he proposed. Certus's colleague obtained the consulship, as had been before intended: but as for himself, another was nominated in his stead. What an honour was this for Pliny! A single man, by the idea conceived of his zeal for the public good, brings over all the suffrages to his own side, supports the dignity of his order, and restores courage to so angust an assembly as the Roman senate, at a time when the terror of the preceding reign still rendered it timorous and almost speechless.

I shall repeat two other occasions also, in which, not as a senator, but an advocate, he displayed both the force of his eloquence, and his just indignation against the oppressors of the people in the provinces. They are both of the same time, but the year is not precisely known.

In the first, "We see an event famous from the rank of the person, salutary by the severity of the example, and memorable for ever from its importance."¹ I shall use Pliny's own words, but shall abridge his account considerably.

"Marius Priscus, proconsul of Africa, accused by the Africans, without proposing any defence, confines himself to demanding the ordinary judges. Tacitus and myself (says Pliny) being charged by order of the senate with the cause of that people, believed it our duty to remonstrate, that the crimes in question were too enormous to admit of a civil trial. For Priscus was accused of no less than selling condemnation, and even the lives of innocent persons.—Vitellius Honoratus and Flavius Martianus were cited as his accomplices, and appeared. The first was accused of having purchased the banishment of a Roman knight, and the deaths of seven of his friends, for three hundred thousand sesterces.² The second had given seven hundred thousand³ to have various torments inflicted upon another Roman knight. This latter had been first condemned to be whipped, then sent to the mines, and at last hanged in prison. But a fortunate death saved Honoratus from the justice of the senate. Martianus therefore was committed without Priscus. Upon some debates which arose upon this affair, it was referred to the first assembly of the senate. This assembly was most august. The prince⁴ presided in it, being then consul. It was about the beginning of January, when the senate is generally most numerous. Besides the importance of the cause, the noise it had made, and the natural curiosity of all men to be eye-witnesses of great and extraordinary events,

had drawn together from all parts a great multitude of auditors. You may imagine the trouble and apprehension we were under, who were to speak in such an assembly, and in the presence of the emperor. I have spoke more than once in the senate, and may venture to say, that I never was so favourably heard anywhere: notwithstanding which every thing daunted me, as if entirely new to me. The difficulty of the cause embarrassed me almost as much as the rest. I considered in the person of Priscus, a man, who, a little before, was of consular dignity, was honoured with an important priesthood, of both which titles he was then divested. I was sincerely concerned at being obliged to accuse an unfortunate person already condemned. If the enormity of his crime urged strongly against him, pity, which usually succeeds a first condemnation, pled no less in his favour. At length I took courage, began my discourse and received as many applauses as I had fears before. I spoke almost five hours: for I was granted an hour and a half more than was at first allowed me.⁵ All that seemed difficult and adverse when I had it to say, became easy and favourable when I said it. The emperor's goodness and care, I dare not call it anxiety, for me, went so far, that he ordered me several times to be admonished by a freedman, who stood behind me, to spare myself, and not to forget the weakness of my constitution. Claudius Marcellinus defended Martianus. The senate adjourned to the next day; for there was not sufficient time for going through a new pleading before night. On the morrow Salvius Liberalis spoke for Priscus. He is a subtle orator, disposes his subject with method, has abundance of vehemence, and is truly eloquent.⁶ All these talents he displayed this day. Tacitus replied with much eloquence, in which the great and the sublime of his character distinguishes itself not a little.⁷ Catus Fronto rejoined very finely for Priscus; and as he spoke last, and there was but little time remaining, he endeavoured more to move the judges, than to justify the accused. Night came on, and the affair was referred to the next day. The question then was to examine the proofs, and proceed to vote. It was certainly something very noble, and highly worthy of ancient Rome, to see the senate assembled, and employed for three days successively, without separating till night. Cornutus Tertullus, consul elect a person of extraordinary merit, and most zealous for justice, was the first that gave his opinion. It was to condemn Priscus to pay the seven hundred thousand sesterces he had received into the public treasury, and to banish him from Rome and Italy. He went farther against Martianus, and was for having him banished even from Africa; and concluded with proposing to the senate, to declare that Tacitus and I had faithfully and worthily answered their expectation in acquitting ourselves of our commission.⁸ The consuls, and all the persons of consular dignity, who spoke afterwards, were of the same opinion. Some division ensued: but at last every body came over to Cornutus.⁹ Pliny makes an end of his letter with a stroke of gayety. "You are now," says he to his friend, "fully informed of what passes here. Let me know in your turn what you do in your country. Send me an exact account of your trees, your vines, your corn, and your cattle; and assure yourself, that if I have not a very long letter from you, you shall have but very short ones from me for the future. Adieu."¹⁰

It appears that Pliny was in a manner the refuge and asylum of the oppressed provinces.¹¹ The deputies from Bœtica¹² implored the senate to appoint Pliny to be their advocate in the suit they had commenced against Cæcilius Classicus, late governor of that pro-

vince. Whatever other employments he might have, he could not refuse that people his assistance, for whom he had before pled upon a like occasion. For, says Pliny, you cancel your first good offices, if you do not repeat them.¹ Oblige an hundred times, and refuse once, men (for such is their nature) forget every thing but the refusal. Accordingly he undertook their cause. Either a voluntary or a natural death saved Classicus from the consequences of this prosecution. Bœtica however did not omit to demand that it should go on; for so the laws required; and accused at the same time the ministers and accomplices of his crimes, demanding justice against them. The first thing that Pliny believed it necessary to establish, was that Classicus was guilty, which was not difficult to prove. He had left among his papers an exact memorandum in his own handwriting of the gains he had made by his several extortions. Probus and Hispanus, two of his accomplices, gave more trouble. Before he entered upon the proof of their crimes, Pliny judged it necessary to show, that the execution of a governor's orders in what was manifestly unjust, was criminal; without which it had been losing time to prove them Classicus's instruments. For they did not deny the facts laid to their charge, but excused themselves by pleading that they were reduced to them by obedience to their superior, which according to them sufficed for their vindication. They pretended, that such obedience could not be made criminal in them, as they were natives of the province, and consequently accustomed to tremble at the least command of the governor. Their advocate, who was a person of great ability, confessed afterwards, that he never was so much perplexed and disconcerted, as when he saw the only arms in which he had placed his whole confidence, wrested out of his hands. The event was as follows. The senate decreed, that the estate of Classicus, before he took possession of his government, should be separated from what he had afterwards acquired. The first was adjudged to his daughter, and the rest to the people of Bœtica. Hispanus and Probus were banished for five years; so black did that which at first seemed scarce criminal, appear after Pliny had spoke. The other accomplices were prosecuted with the same effect. What constancy and courage had Pliny, and how much must he have abhorred injustice and oppression? What a happiness was it for the remote provinces, as Andalusia was, where the governors, like so many petty tyrants, making their will their law, plundered and oppressed the people with impunity, to have a zealous and intrepid defender, whom neither credit nor menaces were capable of swaying in the least! For these public robbers find protection, and are seldom made examples, which can alone put a stop to such pernicious abuses.

Pliny's zeal was soon rewarded in a conspicuous manner.² He was actually made præfect of the treasury, that is to say high-treasurer, with Cornutus Tertullus, A. D. 99, which office he held two years, when they were both nominated consuls to be substituted to the usual ones for the following year. Trajan spoke in the senate to have this honour conferred upon them, presided in the assembly of the people at their nomination, and proclaimed them consuls himself. He gave them great praises, and represented them as men, who equalled the ancient consuls of Rome in their love of justice, and the public good. "It was then I perfectly knew," says Pliny, speaking of his colleague, "what kind of man, and of what value, he was. I heard him as a master, and respected him as a father, less on account of his advanced age, than his profound wisdom."³

Pliny, when consul, A. D. 100, pronounced in his

own and his colleague's name, an oration to thank Trajan for having conferred that dignity upon them, and to make his panegyric according to the order he had received from the senate, and in the name of the whole empire. I shall have occasion in the sequel to speak of this panegyric.

About the end of the year 103, Pliny was sent to govern Pontus and Bithynia in quality of proconsul. His sole employment there was to establish good order in his government, to execute justice, to redress grievances, and soften subjection. He had no thoughts of attracting respect by the pomp of equipage, difficulty of access, haughtiness in hearing, and insolence in giving answers. A noble simplicity, an always frank and easy reception, an affability that sweetened necessary refusals, with a moderation that never departed from itself, conciliated the affections of every body.

Trajan, otherwise the most humane and just of princes, had set on foot a violent persecution against the Christians. Pliny, from the necessity of his office, and in consequence of his blindness, had his share in it. But the natural sweetness of his disposition made him averse, at least in some measure, to inflict punishments upon persons guilty of no crime. In consequence, finding himself perplexed in the execution of the emperor's orders, he wrote him a letter upon that head, and received an answer, which, of all the monuments of paganism, are perhaps those that do most honour to the Christian religion. I shall insert both at length in this place.

*Pliny's Letter to the Emperor Trajan.*⁴

"It is a part of my religion, Cæsar, to explain all my scruples to you. For who can either determine or instruct me better? I never was present at the proceedings against any Christians: so that I neither know upon what the information against them turns, nor how far their punishment should extend. I am much at a loss about the difference of age. Must young and old without distinction suffer the same inflections? Are not those who repent to be pardoned; or is it to no purpose to renounce Christianity, after having once embraced it? Is it the name only that I am to punish in them, or are there any crimes annexed to that name? However it may be, I have made this my rule in respect to the Christians brought before me. Those who have owned themselves such I have interrogated a second and third time, and threatened them with punishment. When they persisted, I ordered it accordingly. For of whatever nature their confession was, I believed it indispensably necessary to punish in them their disobedience and invincible obstinacy. There were others possessed with the same frenzy, whom I have reserved in order to send them to Rome, because they are Roman citizens. Accusations of this kind becoming afterwards more frequent even from being set on foot, as is usual, various kinds of them offer. A memorial has been put into my hands, wherein several persons are accused of being Christians, who deny that they either are or ever were so. They have in my presence, and in the terms I prescribed, invoked the gods, and offered incense and wine to your image, which I caused expressly to be brought out with the statues of our divinities. They have even uttered violent imprecations against Christ. And this, I am told, is what none, who are truly Christians, can ever be forced to do. I believed it therefore necessary to acquit them. Others, who have been brought before me by an informer, have at first confessed themselves Christians, and immediately after denied it; declaring that they had indeed been so, but that they had ceased to be so, some above three, and others a greater number of years, and some for more than twenty. All these people have adored your image, and the statues of the gods; and all of them loaded Christ with curses. They have affirmed to me, that their whole error and fault consisted in these points: That on a day fixed, they assembled before sunrise, and sung alternately hymns to Christ as to a god; that they engaged themselves by oath, not to any crime, but not

¹ Est ita natura comparatum, ut antiquiora beneficia subvertas, nisi illa posterioribus cumules. Nam, quamlibet sæpe obligasti, si quid unum neges, hoc solum meminerunt, quod negatum est.

² In Panegyric. Trajan.

⁴ Ep. revii. l. 10.

to rob or commit adultery; to be faithful to their promise, and not to secrete or deny deposits: That after this it was their custom to separate, and then to reassemble, in order to eat promiscuously some simple and innocent food:¹ That they had ceased to do so since my edict, by which, according to your orders, I had prohibited all assemblies whatsoever. These depositions convinced me more than ever, that it was necessary to extort the truth by force of torments out of two virgin slaves, whom they said were priestesses of their worship: but I discovered only a bad kind of superstition, carried to excess; and for that reason have suspended every thing till I have your farther orders. The affair seems worthy of your reflection, from the multitude of those involved in the danger. For great numbers of all ages, sexes, and conditions, are liable to this accusation. This contagious evil has not only infected the cities, but has reached the villages and country. I believe however that it may be remedied, and that a stop may be put to it: and it is certain that the temples, which were almost entirely abandoned, are now frequented; and that the long neglected sacrifices are renewed. Victims are sold every where, which before had few purchasers. From this it may be judged what numbers may be reclaimed, if pardon be granted to repentance."

*The Emperor Trajan's Answer to Pliny.*²

"You have, most dear Pliny, taken the method you ought in proceeding against the Christians brought before you: for it is impossible to establish a certain and general form in affairs of such a nature. It is not necessary to make strict inquiry after those people: but if they are accused and convicted, they must be punished. However, if the accused denies that he is a Christian, and proves he is not by his behaviour, I mean by invoking the gods, it is proper to pardon him on his repentance, whatever causes of suspicion may before have been laid to his charge. *For the rest, anonymous information ought not to be received in any kind of crime: for that were of pernicious example, and does not suit the times in which we live.*"³

I leave it to the reader to make the reflections, these two letters naturally suggest, upon the magnificent praise they include of the purity of manners of the primitive Christians, the amazing progress Christianity had already made in so few years, even to occasion the temples to be abandoned; the incredible number of the faithful of all ages, sexes, and condition; the authentic testimony rendered by a Pagan of the belief of the divinity of Jesus Christ generally established amongst those faithful; the remarkable contradiction of Trajan's opinion, for if the Christians were criminal, it was just to make strict inquiry after them, and if not, it was unjust to punish them though accused; and lastly, upon the maxim taken from the law of nature, with which the emperor concludes his letter, in declaring, that he should deem it a dishonour to his age, if, in any crime whatsoever, (the expression is general) regard were had to informations without the names of their authors.

On Pliny's return to Rome, he resumed business and his employments. His first wife being dead without children, he married a second named Calphurnia. As she was very young, and had good natural talents, he found no difficulty in inspiring her with a taste for polite learning. It became her sole passion; but she reconciled it so well with her affection for her husband, that it could not be said whether she loved Pliny for polite learning, or polite learning for Pliny.⁴

When he was to plead some important cause she always had several persons waiting to bring her the first news of his success, and the emotion that expectation occasioned ceased only with their return. If he read any oration or other piece to an assembly of his friends, she never failed to contrive herself some place, whence before a curtain she might overhear the applauses given him. Her husband's works were continually in her hand, and with no other art but love for her master, she composed airs upon the lyre to his verses. His letters to her show how far he carried his tenderness for a wife so worthy of his affection and esteem.⁵ "You tell me that my absence gives you pain, and that your sole consolation is reading my works, and often laying them by you in my place. I am transported with joy that you desire me so ardently, and at your manner of consoling yourself. As for me, I read your letters over and am perpetually opening them again as if they were new ones. But they only serve to aggravate the regret I feel in wanting you. For what felicity must one not find in the conversation of her, whose letters have such charms! Fail not, however, to write often to me, though it gives me a kind of pleasure that torments me." In another letter⁶ he says: "I conjure you most earnestly, to prevent my anxiety by one and even two letters every day. I shall at least feel hope while I read them, though I fall into my first alarms afterwards." In a third,⁷ "To tell you to what a degree your absence affects me would seem incredible. I pass the greater part of my nights in thinking of you. In the day and at the hours I used to see you, my feet in a manner carry me of themselves to your apartment; and not finding you there, I return with as much sadness and confusion, as if I had been refused entrance."

After having received some hurt at her first time of being with child, she recovered, and lived a considerable time, but left him no issue.⁸

Neither the time nor circumstances of Pliny's death are known.

I have not pretended hitherto to give an exact and continued account of Pliny's actions, but only an idea of his character by some events more remarkable than others, and consequently the most proper for making it known. I shall with the same view add some other facts, without confining myself to the order of time, and shall reduce them to four or five heads.

I. Pliny's application to study.

It had been strange if Pliny, brought up in the sight and under the care of his uncle Pliny the naturalist, had wanted a taste for the sciences, and indeed had not devoted himself entirely to them. We may believe that in his first studies he followed the plan he laid down for a young man who had consulted him upon that subject. As this letter may be useful to youth, I shall insert part of it here.⁹

"You ask me in what manner I would advise you to study. One of the best methods, according to the opinion of many, is to translate Greek into Latin, or Latin into Greek. By that you will acquire justness and beauty of diction, happiness and grace of figures, and facility in expressing your sense; besides, in that imitation of the most excellent authors, you will insensibly contract a habit of thinking and expressing yourself like them. A thousand things which escape a man that reads, do not escape a translator. Translation enlarges the mind, and forms the taste. You may also, after having read something only for the sake of making it your subject, treat it yourself, with the resolution not to be excelled by your original. You may then compare your work with your author's, and carefully examine what he has done better than you, and you better than him. What a joy will it be to you, to perceive yours sometimes the best; and how much will it redouble your emulation, should you find yourself always the inferior! I know your present study is the eloquence of the bar: but for the attainment of that, I would not advise you to

¹ Affirmabant autem hanc fuisse summam vel culpæ suæ, vel erroris, quod essent soliti stato die ante lucem convenire: carnemque Christo, quasi deo, dicere secum invicem; seque sacramento non in scelus aliquod obstringere, sed ne furta, ne Intrusum, ne adulterium committerent, ne fidem fallerent, ne depositum appellari abnegarent: quibus peractis, morem sibi discedendi fuisse, transque cœundi ad capiendum cibum, promiscuum tamen et innoxium.

² Ep. xviii.

⁶ Ep. x. l. 8.

⁷ Ep. iv. l. 6.

⁸ Ep. ix. l. 7.

⁹ Ep. vii. l. 7.

confine yourself entirely to that contentious style, that breathes nothing but war and debate. As fields delight in change of seeds, our minds also require to be exercised in different studies. I would therefore have you sometimes make a fine piece of history your employment, sometimes the composition of a letter, and sometimes verses——It is in this manner the greatest orators, and even the greatest men, have exercised or unbended themselves; or rather have exercised and unbended both together. It is amazing how much these little works awaken and exhilarate the genius. I have not said what it is necessary to read, though the having mentioned what it is proper to write, sufficiently speaks that. Remember only to make a good choice of the best authors in very kind; for it has been well said, that it is necessary to read much, but not many things."¹

We have seen that Pliny at the age of fourteen wrote a Greek tragedy, and afterwards exercised himself in the several species of poetry. He was much delighted with reading Livy. He admired the ancients, without being of the number of those, who despise the moderns.² I cannot believe, says he, that nature is become so barren and exhausted, as to produce nothing valuable in our days.

He tells a friend³ in what manner he employs himself during the public diversions. "I have passed all these last days in composing and writing with the greatest tranquillity imaginable. You may ask how that is possible in the midst of Rome? It was the time of the shows in the Circus which gave me no manner of pleasure. I see nothing new or varied in them, and consequently nothing worth seeing more than once. This redoubles my astonishment, that so many thousand—and even grave persons—should have a puerile passion for seeing horses run, and men driving chariots, so often. When I consider this insatiable desire to see these trifling common sights over and over again, I feel a secret satisfaction in taking no pleasure in such things, and am glad to employ a leisure in polite studies, which others throw away upon such frivolous amusement."⁴

We see study was his whole joy and consolation.⁵ "Literature," says he, "is my diversion and comfort; and I know nothing so agreeable as it is to me, and nothing so mortifying as not to be softened by it. In my grief for my wife's indisposition, the sickness of my family, and even the deaths of some of them, I find no remedy but study."⁶ It indeed makes me more sensible of adversity, but renders me also more capable of bearing it."

II. Pliny's esteem and attachment for persons of virtue and learning.

All the great men of his age, all who were most distinguished by eminent virtues, were Pliny's friends: Virginian Rufus, who refused the empire; Corellius, who was considered as a perfect model of wisdom and probity; Helvidius, the admiration of his times; Rusticus Arulenus and Senecio, whom Domitian put to death; and Cornutus Tertullus, who was several times his colleague. He thought it also highly for his honour to have contracted a particular amity with the persons, who made the greatest figure then in polite learning, Tacitus, Suetonius, Martial, and Silius Italicus. "I have read your books," says he to Tacitus,⁷ "and have observed with all the exactness in my power, what I believe it necessary to alter and retrench: for I love no less to speak truth, than you

to hear it; besides, no people are more docile to reproof, than those who deserve most praise."⁸ I expect that you will send back my book in your turn with your corrections. Agreeable, charming exchange! How much am I delighted to think, that if posterity sets any value upon us, it will publish to the end of time with what freedom, simplicity, and friendship we lived together.⁹ It will be something rare and remarkable, that two men almost of the same age, of the same rank, and of some reputation in the republic of letters, (for I am reduced to speak modestly of you when I join you with myself) should have assisted each other's studies so faithfully. As for me, from my most early youth, the reputation and glory you had acquired, made me desirous of imitating you, and of treading, and of appearing to tread, in your steps, not near you, but nearer than another. It was not because Rome had not at that time abundance of geniuses of the first rank: but among them all the similitude of our inclinations pointed out you, as the most proper, as the most worthy of being imitated. This is what highly augments my joy, as often as I hear it said, that, when conversation turns upon polite learning, we are named together."

We may conceive how studious Pliny was to oblige the historian Suetonius, from what he writes of him to a friend. This letter,¹⁰ though short, is one of the most elegant of his come down to us. "Suetonius, who lodges with me, is for buying a little spot of land, which one of your friends is disposed to sell. Favour me so far, I beg you, as not to let him give more for it than it is worth; which will make him like his purchase. A bad bargain is always disagreeable; but most so, in seeming to reproach us with imprudence. This bit of land, if not too dear, has many temptations for my friend: its small distance from Rome, the goodness of the ways, the mediocrity of its buildings, with its appurtenances more fit to amuse than employ. For these men of learning, devoted like him to study, want only as much land as is necessary for unbending their minds and delighting their eyes in good air. A single alley to walk in, a back way into the fields, and as many vines and plants as they can be acquainted with without burdening their memories, abundantly suffice them. I tell you all this, that you may know the better how much he will be obliged to me, and I to you, if he can buy this little place, with these recommendations, without any reason to repent it."¹¹

Martial, so well known from his epigrams, was also one of Pliny's friends, and the death of that poet gave him great concern.¹² "I am informed," said he, "that Martial is dead, and am very sorry for it. He was an ingenious, subtle, sharp man, and had abundance both of salt and gall, with no less candour, in

¹ Aiunt multum legendum esse, non multa.

² Sum ex illis qui mirer antiquos; non tamen, ut quidam, temporum nostrorum ingenia despicio. Neque enim quasi lassæ et effictæ natura, ut nihil jam laudabile pariat. Ep. xxi. l. 6.

³ Ep. vi. l. 9.

⁴ Quos ego (quosdam graves homines) cum recorder in lectani, frigida, assidua, tam instabiliter desidero, capio aliquam voluptatem, quod hæc voluptate non capiar. Ac per hoc diu libenter in oratione meum in literis colloco, quos alii otiosissime occupationibus perdunt.

⁵ Ep. xiv. l. 2.

⁶ Ad unicuique doloris levamentum studia consugio, quæ præstat: ut adversa magis intelligam, sed patientius feram.

⁷ Ep. xx. l. 7.

⁸ Nam et ego verum dicere assuevi, et tu libenter audire. Neque enim ulli patientius reprehenditur, quam qui maxime laudari merentur.

⁹ O jucundas, ô pulcras vices! Quam me delectat, quod, si qua posteris cura nostri, usquequoque narrabitur, quæ concordia, fide, simplicitate vixerimus! Erit rarum et insigne, duos homines ætate, dignitate propemodum æquales, nonnullius in literis nominis, (eorum enim de te quoque parcius dicere, quia de me simul dico) alterum alterius studia fovisse.

¹⁰ Ep. xiv. l. 1.

¹¹ Tranquillus, contubernalis meus, vult emere agerem, quem venditare amicus tuus dicitur. Rogo cures, quanti æquum est, emat: ita enim delectabit emisse. Nam mala emptio semper ingrata est, eo maxime quod exprobare stultitiam domino videtur. In hoc autem agello (si modo arriuerit pretium) Tranquilli mei stomachum multa sollicitant: vicinitas urbis, oportunitas vine, mediocritas villæ, modus ruri, qui avocet magis quam distringat. Scholasticis parre studiosis, ut hic est, sufficit abunde tantum soli, ut relevare caput, rescire oculos, reptare per limitem, unamque similitam terere, omnesque viticulas suas nosse, et numerare arbusculas præsit. Hæc tibi exposui, quo magis scires, quantum ille esset mihi, quantum ego tibi deberitus, si prædium istud, quod commendatur his dotibus, tam salubriter emerit, ut patientius locum non relinquat. Vale. Mr Rolin adds, "that the French tongue cannot render the delicacy and elegance of the diminutives and frequentatives scattered in abundance throughout this little letter." Agellum Venditare Reptare per limitem. Viticulas. Arbusculas. Prædium.

¹² Ep. xxi. l. 3.

his writings.¹ When he left Rome, I gave him something to help him on his journey; which little assistance I owed him, as well on account of our friendship, as the verses he had made for me. It was the ancient custom to confer rewards either of honour or profit, upon such as had written in praise of cities or certain individuals. But that custom, with many others no less noble and decent, is one of the last in modern practice. Ever since we have ceased to do what deserved praise, we have despised it as a thing of no value."² Pliny repeats the passage of those verses, in which the poet, addressing himself to his muse, bids her go to Pliny at his house upon the Esquiline hill, and approach him with respect.

Sed ne tempore non tuo disertam
Pulces ebrja janam, videto.
Totus dat tetrici dies Minervæ,
Dum centum studet auribus virorum
Hoc quod secula posterique possint
Arpinis quoque comparare chartis.
Seras tutor ibis ad lucernas:
Hæc hora est tua, cum furit Lyæus,
Quum regnat rōsa, quum madent capilli.
Tunc me vel rigidi legant Catones.

Mr Sacy has translated these verses into French, thus:

Prends garde, petite ivrognesse,
De n'aller pas, à contre-temps,
Troubler les emplois importants
Dû du soir au matin l'occupe sa sagesse.
Respecte les moments qu'il donne à des discours
Qui font le charme de nos jours,
Et que tout l'avenir, admirant notre Pliny
Osera comparer aux Oracles d'Arpine.
Prends l'heure que les doux propos,
Enfants des vers et des pots,
Ouvrent tout l'esprit à la joie;
Qu'il se détend, qu'il se déploie
Qu'on traite les sages de sots;
Et qu'alors, en humeur de rire,
Les plus Catons te puissent lire.

[The same verses in English.]

Wanton muse, awhile forbear,
Of improper times beware;
Knock not at his learned gate;
All day long affairs of weight—
A thousand hearers all day long
To his charming accents throng;
Strains so sweetly wise, so rare,
Future ages shall compare
To those of Arpinas's son.
Though from Greece the palm he won,
Sist not there till evening hours,
Till Bacchus reigns, and softer powers;
When crowned with roses, sweet with oils,
Mirth laughs at care, and learned toils:
Then take thy time devoid of fear,
When Cato's self thy lays would hear.

"Do you not think," says Pliny in concluding his letter, "that the man who wrote of me in these terms, well deserved some tokens of my affection at his departure, and of my grief at his death?"

He also very much lamented that of Silius Italicus, on whose poetry he passes a judgment entirely just.⁴ "He wrote verses," says he, "with more art than genius."⁵ An incurable abscess having given him a disgust for life, he ended his days by a voluntary abstinence from food.

III. Pliny's Liberality.

Pliny, in comparison with some of the rich persons of Rome, had but a very moderate fortune, but a soul truly great, and the most noble sentiments. Of this his almost innumerable liberalities are an undoubted proof. I shall relate only a part of them. He had laid down principles to himself upon this head which

well deserve attention: "In my opinion," says he, "a man truly liberal should give to his country, his relations by blood or marriage, and his friends, but his friends in necessity."⁶ This is the order in giving that equity prescribes, and which he followed exactly.

We have already seen that he made a very generous present to Quintilian his master, towards the portion of his daughter on her marriage, and assisted Marial when he retired from Rome. Of these two friends, the latter was in necessity, and the other was not rich.⁷

He had given his nurse a small estate in land, which at the time he gave it her, was worth an hundred thousand sesterces, or about six hundred pounds. What great lords of modern date act in this manner? Pliny, however, calls this a little present: *Munusculum*. And 'after bestowing this piece of land, we find him make his nurse's income from it his care. He writes to the person who had the care of it, to recommend the improvement of it to him. "For," adds he, "she who received this little farm, has not more interest in its produce, than I who gave it her."

Seeing Calvina, whom he had partly portioned out of his own fortune, upon the point of renouncing the inheritance of her father Calvinius's estate, through fear that it was not sufficient to discharge his debts to Pliny, he wrote to her not to affront her father's memory in that manner, and to determine her, sent her a general acquittance.⁸

Upon another occasion he gave Romanus three hundred thousand sesterces (almost nineteen hundred pounds) to purchase him the estate necessary to qualify him for being admitted into the order of Roman knights.⁹

Corellia, the sister of Corellius Rufus, for whom Pliny had always a great respect during his life, bought lands of him at the price of seven hundred thousand sesterces. Upon better information she found those lands worth nine hundred thousand, and pressed him earnestly to take the overplus, but could not prevail upon him to do so.¹⁰ Fine contest this between justice and generosity, in which the buyer's delicacy and the seller's noble disinterestedness are equally admirable! Where shall we find such behaviour now?

Some merchants had purchased his vintage at a very reasonable price, from the hopes of gaining considerably by it. They were disappointed; and he returned money to them all. The reason he gives for it is still more admirable than the thing itself. "I think it no less noble to do justice in one's own house, than from the tribunal; in small than great affairs; and in one's own, as well as in those of other people."¹¹

What he did for his country still exceeds every thing I have said hitherto.¹² The inhabitants of Coma, not having any master among them for the education of their children, were obliged to send them to other cities. Pliny, who had the heart both of a son and a father for his country, made the inhabitants sensible of the advantages that would attend the education of their youth at Coma itself. "Where," says he to their parents, "can they have a more agreeable residence than their country? where form their manners with more safety, than in the sight of their fathers and mothers? and where will their expenses be less than at home? Is it not best for your children to receive their education in the same place where they had their birth, and to accustom themselves from their infancy to love to reside in their native country?"¹³ He offered to contribute one-third towards a foundation for the subsistence of masters, and thought it neces-

¹ Volo cum, qui sit verè liberalis, tribuere patriæ, propitiis, affinis, amicis, sed amicis pauperibus. Ep. xxx. l. 9

⁵ Ep. xiii. l. 4.
⁶ Ubi aut jucundius morantur, quam in patria; aut pudicius continentur, quam sub oculis parentum; aut minor sumptu, quam domi?—Edoceantur hic, qui hic nascuntur: statimque ab infantia natale solum amare, frequentare consuescant.

¹ Erat homo ingeniosus, acutus, acer, et qui plurimum in scribendo et salis haberet et fellis, nec candoris minus.

² Fuit moris antiqui, eos qui vel singulorum laudes vel universarum scriperant, aut honoribus aut pecunia ornare: nostris vero temporibus, ut alio speciosa et egregia, ita hoc impudens exolevit. Nam postquam destimus facere laudanda, laudari quoque inceptum putamus.

³ Cicero.

⁴ Ep. vii. l. 3.

⁵ Scribebat carmina majore cura quam ingenio.

nary to leave the rest of the expense upon the parents, in order to render them the more attentive in choosing good teachers from the necessity of the contribution, and the interest they would have in seeing their expense well bestowed. He did not confine himself to this donation.¹ For as he says elsewhere, liberality once on foot knows not how or where to stop, and has still the more charms the more we use it.² He founded a library there, with annual pensions for a certain number of young persons of family, whose fortunes did not afford them the necessary supplies for study. He had accompanied the institution of this library with a discourse, which he pronounced in the presence only of the principal citizens. He afterwards deliberated whether he should publish it. "It is hard," says he, "to speak of one's own actions without giving reason to judge that we do not speak of them merely because we did them, but did them for the sake of speaking of them. As for me, I do not forget that a great soul is far more affected with the secret reports of conscience, than the most advantageous ones of common fame. Our actions ought not to follow glory, but glory them; and if through the caprice of fortune they do not find it, we ought not to believe, that what has deserved it, loses any thing of its value."³

It is not easy to comprehend how a private person was capable of so many liberalities. This he explains himself in a letter to a lady, to whom he had made a considerable remittance. "Do not fear," says he, "that such a present will distress me: pray make yourself easy upon that head. My fortune indeed is not large. My rank requires expense, and my income, from the nature of my estate, is no less casual than moderate. But what I want on that side, I find in frugality; the most assured source of my liberality." *Quod cessat ex redivit, frugalitatis suppletur: ex qua, velut e fonte, liberalitas nostra decurrit.* What a lesson, and at the same time what a reproach is this to those young noblemen, who with immense estates, do no good to any body, and often die much in debt.⁴ They are lavish to prodigality upon luxury and pleasures, but close and cruel to insensibility to their friends and domestics. "Ever remember," says Pliny, speaking to a young man of distinction, "that nothing is more to be avoided, than that monstrous mixture of avarice and prodigality, which prevails so much in our times; and that, if one of these vices suffice to blast a person's reputation, both of them must disgrace him much more."⁵

IV. Pliny's Innocent Pleasures.

Pliny's disposition was not rigid and austere. On the contrary he was extremely facetious, and took pleasure in conversing gaily with his friends. *Aliquando iudeo, joco, ludo: utque omnia innoxia remissionis genera complectar, homo sum.*⁶

He was very glad to see his friends at his table, and often gave and accepted entertainments, but such of which temperance, conversation, and reading, made the principal part. "I shall come to supper with you," says he to a friend, "upon condition, however, that we have nothing but what is plain and frugal, except only conversation in abundance, after the manner of Socrates: and not much either even of that."⁷

He reproaches another with⁸ not having kept his promise with him. "On my word you shall hear of it,

You put me to the expense of providing a supper for you, and do not come to it. Justice is to be had at Rome. You shall pay me to the last farthing, which is more perhaps than you imagine. I had got each of us a lettuce, three snails, two eggs, a cake, with muscadell wine and ice. Besides which we had Spanish olives, gourds, shalots, and a thousand other meats to the full as delicious. But you were better pleased at I know not who's, with oysters, sow's belly stuffed, and scarce fish. I shall certainly punish you for it."

He describes one of his parties of hunting⁹ with all the wit and pleasantry imaginable. "I know you will laugh, and consent that you do laugh as much as you please. That very Pliny, whom you know, has caught three wild boars; and very large ones too. What, himself? say you. Himself. Do not believe, however, that they cost my indolence much. I sat down near the nets: I had neither spear nor dart by me, but I had my book and a pen: I meditated, wrote, and in case of my going home with my hands empty, had provided myself with the consolation of having my leaves full."¹⁰

Hence we see study was his darling passion. That taste followed him universally, at table, in hunting, and wherever he went. He employed in it all the intervals of time, which were not passed in the service of the public: for he had laid it down to himself as a law, always to give business the preference to pleasure, and the solid to the agreeable.¹¹ This made him desire leisure and retirement so ardently. "Shall I never then," cried he, when oppressed by a multiplicity of affairs, "be able to break the shackles with which I am hampered, since I cannot unbind them? No, I dare not flatter myself with that. Every day some new care augments my old ones. One business is no sooner at an end than another rises up. The chains of my occupation are perpetually multiplying and growing more heavy."¹²

In writing to a friend,¹³ who employed his leisure like a wise man in a delightful retirement, he could not avoid envying him. "It is thus," says he, "that a person no less distinguished in the functions of the magistrate, than the command of armies, and who has devoted himself to the service of the commonwealth as long as honour required it, ought to pass his age. We owe our first and second stage of life to our country, but the last to ourselves. This the laws seem to advise us, in granting us our quietus at sixty. When shall I be at liberty to enjoy rest? At what age shall I be permitted to imitate so glorious a retirement: and when will it be possible for mine not to be called sloth, but honourable leisure?"¹⁴

He never thought he lived or breathed, but when he could steal from the town to one of his country houses, for he had several. His agreeable description of them sufficiently shows the pleasure he took in them. He speaks of his orchards, his kitchen, and pleasure gardens, his buildings, and especially of the places that were in a manner the work of his own hands, with that joy and satisfaction which every man feels who builds or plants in the country. He calls these places his delights, his loves, and his real loves: *amores mei, vera amores: ipse possui.*¹⁵ And in another place: *præterea indulsit amori meo; amo enim que maxime ex parte ipse inchoavi, aut inchoata percolui.*¹⁶ "Am I in the wrong," says he to one of his friends, "for being so fond of this retreat; for making it my joy, and for staying so long at it?" And in another letter: "Here are neither the offensive, nor the impertinent. All here is calm, all peace: and as the goodness of

the climate makes the sky more serene, and the air more pure, my body is in better health, and my mind more free and vigorous. The one I exercise in hunting, and the other in study."

Pliny's Ardour for Reputation and Glory.

It is not to be doubted that that glory was the soul of Pliny's virtues. His application, leisure, diversions, studies, all tended that way. It was a maxim with him, that the only ambition which suited an honest man, was either to do things worthy of being written, or to write things worthy of being read.¹ He did not deny, that the love of glory was his darling passion. "Every body judges differently of human happiness.² For my part, I think no man so happy as he who enjoys a great and solid reputation; and who, assured of the voices of posterity, tastes beforehand all the glory it intends him. Nothing affects me so much," says he, "as the desire of surviving long in the remembrance of mankind; a disposition truly worthy of a man, and especially of one, who having nothing to reproach himself with, does not fear the judgment of posterity."³ The celebrated Thrasea used to say, that an orator ought to charge himself with three kinds of causes: those of his friends, those who want protection, and those of which the consequences may be of an exemplary nature—"I shall add to these three kinds," says Pliny again, "perhaps as a man not without ambition, great and famous causes. For it is just to plead sometimes for reputation and glory, that is to say, to plead one's own cause."⁴

He passionately desired that Tacitus would write his history:⁵ but, less vain than Cicero, he did not ask him to embellish it with lies: *mendaciumque aspergere*. "My actions," says he to that historian, "will in your hands become more great, remarkable, and shining. I do not, however, desire you to exaggerate them: for I know, that history ought never to depart from truth, and that truth does sufficient honour to good actions."⁶ I do not know whether I had reason for saying, that Pliny was less vain than Cicero, and whether Cicero ought not to be deemed the more modest, because the more sincere. He knew what he wanted, and asked an officious supplement of that. But Pliny does not believe he has occasion either for favour or aid. He is more satisfied with his own merit. It is sufficiently great, solid, and noble, to support itself alone for the view of posterity. It has no occasion for any thing, besides an elevation of style, to convey the simple truth down to future ages without any foreign addition.

Pliny often assembled a number of his select friends, in order to read his compositions either in verse or prose to them. He declares in several letters, that he did this with the view of making use of their advice; which might be: but the desire of being praised and admired had a great share in it, for he was very sensible in that point. "I represent to myself already the crowd of hearers,"⁷ (he speaks to a friend whom he advises to read his works in the same manner), "the transports of admiration, the applauses, and even that silence, which, while I speak in public, or read my compositions, is scarce less charming than the loudest applauses, when it proceeds solely from at-

tention, and an impatient desire of hearing what remains."⁸

He was highly offended at the mute and supercilious behaviour of some hearers, when it concerned his friends.⁹ "An excellent work was read in an assembly to which I was invited. Two or three persons, who considered themselves better judges than all the rest of us, heard it as if they had been deaf and dumb. They never opened their lips, made the least motion, or so much as rose up, unless it was when they were weary of sitting. What contradiction, or rather what folly was this, to pass a whole day in mortifying a man, to whose house they came only to express friendship and esteem for him!"¹⁰

He did noble actions; but was well pleased that they should be known, and himself praised for them. "I do not deny," says he, "that I am not so wise, as to be indifferent to that kind of reward, which virtue finds in the testimony and approbation of many."¹¹

Pliny is censured for speaking often of himself, but he cannot be reproached with speaking only of himself. No man ever took more pleasure in extolling the merit of others; which he carried, so far as to occasion his being accused of praising to excess, a fault against which he was very far either from defending himself, or being willing to correct.¹² "You tell me, that I am reproached by some people with praising my friends to excess upon all occasions. I confess my crime, and glory in it. For can there be any thing more generous, than to err through such an indulgence of one's self? And pray who are those people, who believe they know my friends better than I do? Granted they do, wherefore do they envy me so grateful an error? For suppose my friends are not what I say, I am always happy in believing they are. Let me therefore advise these censurers to apply their malignant delicacy to those who believe there is wit and judgment in criticising their friends: as for me, they shall never persuade me, that I love mine too well."

Have I not expatiated too far upon Pliny's private character, and will not the extracts I have made from his letters, appear to the reader too long and abundant? I am afraid they will, and confess my weakness. These characters of integrity, probity, generosity, love of public good, which, to the misfortune of our age, are become so rare, transport me out of myself, ravish my admiration, and make me incapable of abridging my descriptions of them. And indeed, I repeat it again, is there a more gentle, desirable, social, and amiable character, in every respect, than that of which I have been endeavouring so long to give some idea? How agreeable is the intercourse of life with such friends; and how happy is it for the public, when such beneficent persons as Pliny, void of capricious humour, passion, and prejudice, fill the first offices of a state, and make it their study to soften and remove the distresses of those with whom they have to do?

I was wrong in saying that Pliny was void of passion. Exempt as he was from such, as in the judgment of the world dishonour men, he had one, less gross and more delicate indeed, but not less warm and vicious in the sight of the Supreme Judge, whatever endeavours the general corruption of the human heart may make to enoble it, by giving it almost the name of virtue:—I mean, that excessive love of glory, which was the soul of all his actions and undertakings. Pliny and all the rest of the illustrious writers of the Pagan world, were solely engrossed by the desire and care of living in the remembrance of posterity, and of transmitting their names to future ages by writing, which they were in hopes would endure as long as the world, and obtain them a kind of immortality, with which they were blind enough to content themselves.

¹ Equidem beatos puto, quibus deorum munere datum est aut facere scribenda, aut scribere legenda. Ep. xvi. l. 6.

² Alius alium, ego beatissimum existimo, qui bonæ mansuetudine famæ præsumptione perfuitur, certusque posteritatem futura gloria vivit.

³ Mi nihil equè ac diuturnitatis amor et cupidus sollicitas: res humine dignissimæ, præsertim qui nullus sibi conscius culpe, posteritatis memoriam non reformidet.

⁴ Ad hæc ego genera causarum, ambitiosè fortasse, addam tamen claras et illustres. Annum enim est agere nonnullarum gloriæ et famæ, id est suam causam.

⁵ Ep. xlii. l. 7.

⁶ Hæc, utique se habent, notiora, clariora, majora tu facies: quoniam non exigo ut excedas actus rei modum. Nam nec historia debet egredi veritatem, et honestè factis veritas sufficit.

⁷ Imaginor qui concursus, quæ admiratio te, qui clamor, quod etiam silentium moveat: quo ego, cum dico vel recito, non minus quam clamore deleor, si modò silentium acre, et intentum, et cupidum ulterius audiendi.

⁸ Ep. x. l. 2.

⁹ Ep. xvii. l. 4.

¹⁰ Quæ sinisteritas, ac potius amentia, in hoc totum diem impenderet, ut offensas, ut inimicum reliquas, ad quem tantum amicitissimum veneris.

¹¹ Neque enim sum tam sapiens, ut nihil mea interesset, ac ita quæ honestè fecisse me crevisse testificatio quidam et quale præmium accedat. Ep. i. l. 5.

¹² Ep. xxviii. l. 7.

Could any thing be more uncertain, precarious, and frivolous, than this hope? Could not time, which has abolished the greatest part of the works of these vain men, have also abolished the little that remains of them? To what are they indebted for the fragments of them that have escaped the general shipwreck? The little of theirs come down to us, does it prevent all that belongs to them, even their very names, from having perished totally throughout all Africa, Asia, and great part of Europe? Had it not been for the studies kept up by the Christian church, would not barbarism have annihilated their works and names throughout the universe? How vain, how trifling then is the felicity, upon which they relied, and to which they wholly devoted themselves! Have not those, who were the admiration of their own times, fallen into the abyss of death and oblivion, as well as the most ignorant and stupid? We, whom religion has better instructed, should be very blind and void of reason, if, destined by the grace of our Saviour to a blessed immortality, we suffered ourselves to be dazzled by imaginary greatness, and the phantom of an eternity in idea.

The extracts I have made from his letters, are more than sufficient to make the reader acquainted with his genius and manners: it remains for me to give an idea of his style by some extracts from his panegyric upon Trajan, which is an extremely elaborate piece of eloquence, and has always been considered as his masterpiece.

Panegyric upon Trajan.

I have already observed, that Pliny, after his being appointed consul by Trajan, in conjunction with Cornutus Tertellus his intimate friend, received the senate's orders to make that prince's panegyric in the name of the whole empire. He addresses his discourse always to the emperor, as if present. If he were really so, for it is doubted, it must have cost his modesty a great deal: but whatever repugnance he might have to hearing himself praised to his face, which is always very disagreeable, he did not think it proper to oppose the decree of so venerable an assembly. It is easy to judge that Pliny, on that occasion, exerted all his faculties; to which no doubt the warmth of his gratitude added new force. Some extracts, which I am going to make from that piece, will at the same time show the eloquence of its author, and the admirable qualities of the prince it praises.

General praise of Trajan.

"Sæpe ego mecum, patres conscripti, tacitus agitati, qualem quantumque esse oporteret ejus ditione nutuque maria, terræ, pax, bella, regerentur: cum interea ingenti formantique mihi principem, quem æquata diis immortalibus potestas deceret, nunquam voto saltem concipere succurrit similem huic quem videmus. Enituit aliquis in bello, sed obsolevit in pace. Alium toga, sed non et arma honestarunt. Reverentiam ille terrore, alius amorem humanitate captavit. Ille quesitam domi gloriam, in publico; hic in publico partam, domi perdidit. Postremum, adhuc nemo extitit, ejus virtutes nullo vitiorum confinio laderentur. At principi nostro quanta concordia quantusque concentus omnium laudum omnisque gloriæ contigit; ut nihil severitati ejus hilaritate, nihil gravitati simplicitate, nihil majestati humanitate detrahatur! Jam firmitas, jam proceritas corporis, jam honor capitis, et dignitas oris ad hoc ætatis inflexa maturitas, nec sine quo jam munere deum festinatis senectutis insignibus ad augendam majestatem ornata cæsaries, nonne longè fatique principem ostentant?"

"I have often endeavoured, fathers, to form to myself an idea of the great qualities which a person worthy of ruling the universe absolutely by sea and land, in peace and war, ought to have; and I confess, that when I have imagined, according to my best discretion, a prince capable of sustaining with honour a power comparable to that of the gods, my utmost wishes have never rose so high, as even to conceive one like him we now see. Some have acquired glory in war, but lost it in peace. The gown has given

others fame, but the sword disgrace. Some have made themselves respected by terror, and others beloved by humanity. Some have known how to conciliate esteem in their own houses, but not to preserve it in public; and some to merit reputation in public, which they have ill sustained at home. In a word, we have seen none hitherto, whose virtues have not suffered some alloy from the neighbouring vices. But in our prince, what an assemblage of all excellent qualities what an union of every kind of glory do we not behold; his severity losing nothing by his cheerfulness, his gravity by the simplicity of his manners, nor the majesty of his power and person by the humanity of his temper and actions! The strength and gracefulness of his body, the elegance of his features, the dignity of his aspect, the healthy vigour of his maturer years, his hoary hair, which the gods seem to have made white before the time only to render him the more venerable; do they not all combine to point out, to speak, the sovereign of the world?"

Trajan's conduct in the Army.

"Quid cum solatio fessis militibus, ægris opem ferres? Non tibi moris tua inire tentoria, nisi cum militum ante lustrasses; nec requiem corpori, nisi post omnes, dare. Hac mihi admiratione dignus imperator non videretur, si inter Fabricios, et Scipiones, et Camillos talis esset. Tunc enim illum lumnitionis ardor, semperque melior atque accenderet. Postquam vero studium armorum à manibus ad oculos, ad volupstatem à labore translatus est, quum magnam est unum ex omnibus patrio more, patria virtutè lætari, et sine æmulo ac sine explosemulo certare, secum contendere: ac, sicut imperat solus, solum ita esse qui debeat imperare!"

"In your care of the tired and wounded soldiers, in which none ever were more attentive, was it your custom to retire to your own tent, till after having visited all the rest, or to take repose, till you had first provided for that of the whole army? To find such a general amongst the Fabricii, the Scipios, the Camilli, would seem no great matter of admiration. In those days there was always some great example, some superior, to quicken such ardour, and to kindle in the soul a noble emulation. But now, when we love arms only in the shows of the circus, and have transferred them from the hand to the eye, from fatigue and toil to pastime and amusement, how glorious is it to be the only one in retaining the ancient manners and virtues of his country, and to have no other model to propose, no other rival to contend with, but himself; and as he reigns alone, to be the only person worthy of reigning!"

"Veniet tempus quo postero visere, visendum tradere minoribus suis gestient, quis sudores tuos hauserit campus, quæ refectiones tuas arbores, quæ somnum saxa pretulerint, quod denique tectum magnus hospes impleveris, at tunc ipsi tibi ingentium ducum sacra vestigia iisdem in locis monstrabuntur."

"The time will come, when posterity will eagerly visit themselves, and show to their children, the plains where you sustained such glorious labours, the trees under which you refreshed yourself with food, the rocks where you slept, and the houses that were honoured with so great a guest: in a word, they will trace your sacred footsteps everywhere, as you have done those in the same places of the great captains you delight so much to contemplate."

"Itaque perinde summis atque infimis carus, sic imperatorem commilitonemque miscueras, ut studium omnium laboremque et tanquam particeps sociusque eleveras. Felices illos, quorum fides et industria, non per nuncios et interpretes, sed ab ipso te, nec auribus tuis sed oculis probantur. Consecuti sunt, ut absens quoque de absentibus nemini gravis, quam tibi, crederes."

"Dear as you were alike to great and small, you mingled the soldier and general in such a manner, that at the same time your office exacted their whole

1 At Rome the princes exercised the functions both of magistrates and generals.

obedience and labours as their leader, you softened their toils by sharing in them as their companion. How happy are they to serve you, who are not informed of their zeal and capacity from the reports of others, but are yourself the witness of them in your own person. Hence to their good fortune, even when absent, you rely on none more than yourself in what relates to them."

Trajan's return and entrance into Rome, after his being declared Emperor.

"Ac primum qui dies ille, quo expectatas desideratusque urbem tuam ingressus es!—Non ætas quemquam, non valetudo, non sexus retardavit quominus oculos insolito spectaculo exleret. Te parvuli noscere, ostentare juvenes, mirari senes, ægri quoque neglecto medentium imperio ad conspectum tui, tantam ad salutem sanitatemque, prorepere. Inde alii se satis vixisse te viso, te recepto: alii nunc magis vivendum prædicabant. Fæminas etiam tunc fecunditatis suæ maxima voluptas subit, cum cernerent cui principi cives, cui imperatori milites peperissent. Videres referta tecta ac laborantia, ac ne cum quidem vacantem locum, qui non nisi suspensum et instabile vestigium caperet. Oppletas undique vias, angustumque tramitem relictum tibi: alacrem hinc atque inde populum: ubique par gaudium, paremque clamorem."

"What shall I say of that day, when your city, after having so long desired and expected you, beheld you enter it?—Neither age, sex, nor health could keep any body from so unusual a sight. The children were eager to know you, the youth to point you out, the old to admire you, and even the sick, without regard to the orders of their physicians, crept out, as if for the recovery of their health, to feed their eyes on you. Some said, that they had lived long enough, since they had seen you; and others, that they only now began to live. The women rejoiced that they had children, when they saw for what prince they had brought forth citizens, for what general, soldiers. The roofs were all crowded and ready to break down under the numbers upon them; the very places where there was scarce room to stand and not upright, were full. The throng was so vast in the streets, that it scarce left you way to pass through it: while the joy and acclamations of the people filled all places, and resounded universally to the heavens."

The Example of the Prince how Powerful.

"Non censuram adhuc, non præfecturam morum receperisti; quia tibi beneficiis potius quam remediis ingenia nostra experiri placet. Et alioqui nescio an plus moribus conferat princeps, qui bonos esse patitur, quam qui cogit. Flexibiles quamcumque in partem ducimur à principe, atque ut ita dicam, sequaces sumus—Vita principis censura est, eaque perpetua: ad hanc dirigimur, ad hanc convertimur: nec tam imperio nobis opus est, quam exemplo. Quippe infidelis recti magister est metus. Melius homines exemplis docentur, quæ imprimis hoc in se boni habent, quod approbant quæ præcipiunt, fieri posse."

"You have not yet thought fit to take the censorship upon you, nor to charge yourself with inspecting the manners of the people; because you choose rather to try our disposition by kindness and indulgence, than bitter remedies. And indeed, I do not know whether the prince, who honours the virtues of his people, does not contribute more to them, than he who exacts them with rigour.—The life of a prince is a continual censorship: it is to that we adapt ourselves, to that we turn as to our model; and want less his commands than his example. For fear is but a dubious, a treacherous teacher of duty. Examples are of much greater efficacy with men: for they not only direct to virtue, but prove that it is not impossible to practise what they admonish."

Virtue, not Statues, do Honour to Princes.

"Ibit in secula fuisse principem, cui florenti et incolunt nunquam nisi modici, honores, sæpius nulli decernerentur.—Ac mihi intuenti in sapientiam tuam,

minus mirum videtur, quod mortales istos caducosque titulos aut deprecis, aut temperes. Scis enim ubi vera principis, ubi sempiterna sit gloria; ubi sint honores, in quos nihil flammis, nihil senectuti, nihil successoribus liceat. Arcus enim, et statuas, aras etiam templaque demolitur et obscurat oblivio, negligit carpitque posteritas: contra, contemptor ambitionis et infinitæ potestatis domitor ac fractor animus ipsa vetustate florescit, nec ab ullis magis laudatur, quam quibus minimè necesse est. Præterea, ut quisquis factus est princeps, extemplo fama ejus, incertum bona an mala, cæterum æterna est. Non ergo perpetua principis fama, quæ invitum manet, sed bona concupiscenda est. Ea porro non imaginibus et statuis, sed virtute ac meritis propagatur."

"It will be told in all ages, that there was a prince to whom in the height of glory and good fortune only moderate honours and more frequently none were decreed.—When I consider your profound wisdom, my wonder ceases, on seeing you either decline or moderate these fleeting vulgar titles. You know wherein the true, the immortal glory of a prince consists; you know wherein these honours have their being, which fear neither flames, time, nor the envy of successors. For neither triumphal arches, statues, altars, nor even temples escape oblivion, and the neglect or injuries of posterity. But *he*, whose exalted soul disdains ambition, and sets due bounds to universal power, shall flourish to the latest period of the world, revered and praised by none so much, as those who are most at liberty to dispense with that homage. The fame of a prince, from the moment he becomes so, whether good or bad, is necessarily eternal. He ought not therefore to desire an immortal name, which he must have whether he will or not, but a good one; and that, not statues and images, but merit and virtue perpetuate."

The Prince's Happiness inseparable from that of the People.

"Fuit tempus, ac nimium diu fuit, quo alia adversa alia secunda principi et vobis. Nunc communia tibi nobiscum tam læta, quam tristia; nec magis sine te nos esse felices, quam tu sine nobis potes. An, si posses, in fines votorum, adjecisses, ut ita precibus tuis dii annuerent, si judicium nostrum mereri per-severasses?"

"There was a time, and but of too long duration, when our misfortunes and prosperity and the prince's were the reverse of each other. But now our good and evil are one and the same with yours; and we can no more be happy without you, than you without us. Had it been otherwise, would you have added at the end of your public vows, 'That you desired the gods would hear your prayers no longer, than you continued to deserve our love?'"

It is remarkable that a condition was inserted by the order of Trajan himself in the vows made for him by the public: *Si bene rempublicam et ex utilitate omnium rexeris*: that is, "if you govern the commonwealth with justice, and make the good of all mankind the rule of your power." "O vows," cries Pliny, "worthy of being made, worthy of being eternally heard! The commonwealth has, by your guidance entered into a contract with the gods, that they should be watchful for your preservation, as long as you are so for that of your country: and if you act any thing to the contrary, that they should withdraw their regard and protection from you." "Digna vota, quæ semper suscipiantur, semperque solvantur. Egit cum diis, ipso te auctore, Respublica, ut te sors: tæm incolumemque præstarent, si tu cæteros præstitisses: si contra, illi quoque à custodia tui corporis oculos dimoverent."

Admirable Union between the Wife and Sister of Trajan.

"Nihil est tam primum ad similitudinem quam æmulatio, in fœminis præsertim. Ea porro maxime nascitur ex conjunctione, aliter æqualitate, exardescit invidia, cujus finis est odium. Quo quidem admirabilium existimandum est, quid mulieribus duabus in una domo parique fortuna nullum certamen, nulla conten-

tu est. Suspiciunt invicem invicem cedunt: cūque te utraque effusissimè diligit, nihil sua putant interesse utram tu magis aures. Idem utrique propositum, idem tenor vite, nihilque ex quo sentias duas esse."

"Nothing is more apt to produce enmity than emulation, especially among women. It generally is most frequent where it should least be found, I mean in families: equality nourishes it, envy inflames it, the end of which is implacable hatred. And this makes our wonder the greater, when we behold two ladies, equal in fortune, in the same palace, between whom there never happens the least difference. They seem to contend in paying respect and giving place to each other; and though they both love you with the utmost tenderness, they do not think which of them you love best of any consequence. Their views, the tenor of their lives, are so much the same, that there is nothing in either from which one can distinguish them to be two persons."

Trajan was sensible to the Joys of Friendship.

"Jam etiam et in privatorum animis exoleverat priscum mortalium bonum amicitia, cujus in locum raignerant assentationes, Blanditiæ, et pejor odio amoris simulatio. Etenim in principum domo nomen tantum amicitia, inane scilicet irrisumque, manebat. Nam quæ poterat esse inter eos amicitia, quorum sibi alii domini, alii servi videbantur? Tu hanc pulsam et errantem reduxisti. Habes amicos, quia amicus ipse es. Neque enim, ut alia subjectis, alia amor imperatur: neque est ullus affectus tam erectus, et liber, et dominationis impatiens, nec qui magis vices exigit."

"Friendship, that inestimable good, in which of old the happiness of mortals consisted, was banished even from the commerce of private life; and flattery, compliment, and outward profession, the phantom of friendship, more dangerous even than enmity, had assumed its place. If the name of friendship was still known in the court of princes, it was only as the object of contempt and ridicule. For what friendship could subsist between those, who considered each other in the light of masters and slaves? But you have recalled the exile from wandering abroad: you have friends, because you are yourself a friend. For the power of a prince, though he commands without bounds in other things, does not extend to love. Of all the affections of the soul, that is the most free, unbiassed, and averse to constraint; none of them exacting returns with greater rigour."

Absolute Power of the Freedmen under the bad Emperors.

"Plerique principes, cum essent civium domini, libertorum erant servi. Horum consilis, horum nutu regebantur: per hos audiebant, per hos loquebantur: per hos præture etiam, et sacerdotia, et consulatus, imò et ab his, petebantur. Tu libertis tuis summum quidem honorem, sed tanquam libertis, habes; abundeque his sufficere credis, si probi et frugi existimantur. Seis enim, præcipuum esse indicium non magni principis, magnos libertos."

"Most of our emperors, while lords of the citizens, were slaves to their freedmen. They governed solely by their counsel and dictates; and had neither will, ears, nor tongues but theirs. By them, or rather from them, all offices, prætor, pontifex, consul, were to be asked. As for you, you have indeed a very high regard for your freedmen, but you regard them as freedmen, and believe them sufficiently honoured in the circumstances of worthy men of moderate fortune. For you know that there is not a more infallible proof of the prince's meanness, than the greatness of his freedmen."

Nothing Exalts the Prince like descending to the Man.

"Cui nihil ad augendum fastigium superest, hic uno modo crecere potest, si se ipso submittat, securus magnitudinis sue. Neque enim ab ullo periculo fortuna principum longius abest, quam ab humilitate."

"To him who has attained the highest fortune, there remains but one manner of exalting himself, and

that is, secure in his greatness, to neglect and ascend from it properly. Of all the dangers princes can incur, the least they have to fear, is making themselves cheap by humility."

In what the Greatness of princes Consists.

"Ut felicitatis est quantum velis posse, sic magnitudinis velis quantum possis."

"As it is the highest felicity to be capable of doing all the good you will, so it is the most exalted greatness to desire to do all the good you can."

Of Pliny's Style.

Pliny's panegyric has always passed for his master piece, and even in his own time, when many of his pieces of eloquence that had acquired him great reputation at the bar, were extant. In praising as consul and by order of the senate, so accomplished a prince as Trajan, to whose favour he was besides highly indebted, it is not to be wondered that he made an extraordinary effort of genius, as well to express his private gratitude, as the universal joy of the empire. His genius shines out everywhere in this discourse; but his heart is still more evident in it; and all knew that true eloquence flows from the heart.¹

When he spoke this panegyric, it was not so long as it is at present.² It was not till after the first essay, that like an able painter, he added new strokes of art to the portrait of his hero; but all taken from the life, and which far from altering the likeness and truth, only rendered them stronger and more sensible. He gives us himself the reason that induced him to act in this manner.³ "My first view," says he, "was to make the emperor (if possible) more in love with his own virtues, by the charms of just and natural praises; and next, to point out to his successors, not as a master, but under the cover of example, the most certain paths to solid glory. For though it be laudable to form princes by precepts, it is difficult, not to say proud and assuming. But to transmit the praises of a most excellent prince to posterity, is setting up a light to guide succeeding emperors, and to the full as useful, with no arrogance." It was not easy for him to have proposed a more perfect model. Trajan may be said to have united all the qualities of a great prince in one only, which was in being perfectly convinced, that he was not emperor for himself, but for his people. But that is not the present question.

The style of his discourse is elegant, florid, and luminous, as that of a panegyric ought to be, in which it is allowable to display with pomp whatever is most shining in eloquence. The thoughts in it are fine, solid, very numerous, and often seem entirely new. The diction, though generally simple enough, has nothing low, or that does not suit the subject, and support its dignity. The descriptions are lively, natural, circumstantial, and full of happy images, which set the object before the eyes, and render it sensible. The whole piece abounds with maxims and sentiments truly worthy of the prince it praises. As fine and eloquent as this discourse is, it cannot however in my opinion be judged of the sublime kind. We do not see in it, as in Cicero's orations, even of the demonstrative kind, those warm and emphatic expressions, noble and sublime thoughts, bold and affecting turns and sallies, and figures full of vivacity and fire, which surprise, astonish, and transport the soul out of itself. His eloquence does not resemble those great rivers, that roll their waves with noise and majesty, but rather a clear and agreeable stream, which flows gently

¹ Pectus est quod disertos facit. *Quintil.*

² Ep. xviii. l. 3.

³ Officium consulatus injunxit mihi ut Reip. nomine Principi gratias agerem. Quod ego in Senatu cum ad rationem et loci et temporis ex more fecissem, bono civi convenientissimum credidi, eadem illa spatiosius et uberius volumine amplecti. Primum, ut Imperatori nostro virtutes cum veris laudibus commendarentur: deinde ut futuri Principes, non quasi à magistro, sed tamen sub exemplo præmonerentur, quæ potissimum via possent ad eandem gloriam niti. Nam præcipere qualis esse debeat Princeps, pulcrum quidem, sed onerosum ac prope superbum est. Laudare verò optimum Principem, ac per hoc posteris, velut è specula, lumen quod sequantur ostendere, idem utilitatis habet, arrogantia nihil.

under the shade of the trees that adorn its banks. Pliny leaves his reader perfectly calm, and in his natural situation of mind. He pleases, but by parts and passages. A kind of monotony prevails throughout his whole panegyric, which makes it not easy to bear the reading of it to the end; whereas Cicero's longest oration seems the finest, and gives the most pleasure. To this I must add, that Pliny's style savours a little of the taste for antitheses, broken thoughts, and studied turns of phrase, which prevailed in his time. He did not abandon himself to them, but was obliged in some measure to conform to the reigning taste. The same taste is obvious in his letters, but with less offence, because they are all detached pieces, in which such a style does not displease: I believe them however far from being comparable to those of Cicero. But all things rightly considered, Pliny's letters and panegyric deserve the esteem and approbation all ages have given them; to which I shall add, that his translator (into French) ought to share them with him.

Ancient Panegyrics.

There is a collection of Latin orations extant, entitled *Panegyrici veteres*, which contains panegyrics upon several of the Roman emperors. That of Pliny is at the head of them, with eleven of the same kind after it. This collection, besides including many facts not to be found elsewhere, may be of great use to such as have occasion to compose panegyrics. The ancients of a better age supply us with no models of this kind of discourses, except Cicero's oration for the Manilian law, and some parts of his other harangues, which are finished masterpieces of the demonstrative kind. The same beauty and delicacy are not to be expected in the panegyrics of which I am speaking. Remoteness from the Augustan age had occasioned a great decline of eloquence, which no longer retained that ancient purity of language, beauty of expression, sobriety of ornaments, and simple and natural air, that rose when necessary, into an admirable loftiness and sublimity of style. But there is considerable talent in these discourses, with very fine thoughts, happy turns, lively descriptions, and very just commendations.

To give the reader some idea of them, I shall content myself with transcribing two passages here in Latin only. They are extracted from the panegyrics spoken by Nazarius in honour of Constantine the Great, upon the birth-day of the two Caesars his sons, A. D. 321. St. Jerome mentions this Nazarius as a celebrated orator, and says that he had a daughter no less esteemed than himself for eloquence.

First Passage.

Nazarius speaks here of the two Caesars. "Nobilissimorum Caesarum laudes exequi velle, studium quidem dulce, sed non et cura mediocris est; quorum in annis pubescentibus non eruptione virtutis tumens germen, non flos præcursor indolis bonæ lætior quam uberior apparet; sed jam facta grandifera, et contra rationem ætatis maximatorumque fructuum matura perceptio. Quorum alter jam obtenderis hostibus gravis terrorem paternum, quo semper barbaria omnis intrinuit, derivare ad nomen suum cepit: alter jam Consulatum, jam venerationem sui, jam patrem sentiens, si quid intactum aut parens aut frater reservet, declarat mox victorem futurum, qui animo jam vincit ætatem. Rapiitur quippe ad similitudinem suorum excellens quæque natura, nec sensim ac lentè indicium promittit boni, cum involucria infantie vividum rumpit ingenium."

Second Passage.

Nazarius praises a virtue in Constantine very rarely found in princes, but highly estimable: that is, continence. He adds also several other praises to it.

"Jam illa vix audeo de tanto Principe commemorare, quod nullam matronarum, cui forma emendatior fuerit, boni sui piguit; cum sub abstinentissimo Imperatore species luculenta, non incitatrix licentiæ esset sed pudoris ornatrix. Quæ sine dubio magna, seu potius divina laudatio, sepe et in ipsis etiam philosophis, non tam re exhibitâ, quam disputatione jactata. Sed semittamus hoc principi nostro, qui ita temperan-

tiam ingenerare omnibus cupit, ut eam non ad virtutem suarum decus adscribendam, sed ad naturæ ipsius honestatem referendam, arbitretur. Quid, facile aditus? quid, aures patientissimas? quid, benigna responsa? quid, vultum ipsam augusti decoris gravitate, hilaritate permixta, venerandum quiddam et amabilem residentem, quis digne exequi possit?"

Can any thing be stronger than this thought? "No lady, however beautiful, has had reason to repent her being so; because under so wise a prince as Constantine, beauty is not an attraction to vice, but the ornament of virtue." And could it be better expressed? *Cùm sub abstinentissimo Imperatore species luculenta, non incitatrix licentiæ esset, sed pudoris ornatrix.*

CHAPTER IV.

OF RHETORICIANS.

THOSE who make it their profession to teach eloquence, and have written precepts upon it, are called Rhetoricians.

Eloquence is the art of speaking well. One might believe that for the attainment of it, it would suffice to hearken to, and follow the voice of nature. She seems to dictate to us what it is necessary to say, and often even the manner of saying it. Do we not every day see a multitude of persons, who without art or study, and by the pure force of genius, can give order, perspicuity, eloquence, and above all, fine sense to their discourse? What more is wanting. It is true, that without the aid of nature precepts are of no use; but it is as true, that they very much support and strengthen her, in serving her as a rule and guide. Precepts are no more than observations, which have been made upon what was either fine or defective, in discourse. For, as Cicero very well observes, eloquence was not the offspring of art, but art of eloquence. These reflections, reduced to order, formed what is called rhetoric. Now who doubts, but they may be of great service for attaining and improving the talent of speaking.

Quintilian, in the third book of his *Institutiones Oratorie*, enumerates a considerable number of the ancient rhetoricians, as well Greek as Latin. I shall expatiate only upon those, whose names and histories are best known, shall slightly pass over others, and even say nothing of many. Mr. Gibert, who has been professor of rhetoric in the college of Mazarine almost fifty years with great reputation, and has several times filled, and always with the same success, the honourable place of principal in the university of Paris, has composed a work upon the subject I now treat, abounding with erudition, of which, as an old friend, he has given me permission to make all the use I should think fit.

ARTICLE I.

OF THE GREEK RHETORICIANS.

EMPEDOCLES. CORAX. TISIAS.

EMPEDOCLES of Agriguntum, a celebrated philosopher, is supposed to be the first that had any knowledge of rhetoric; and *Corax* and *Tisias*, both Sicilians, are said to be the first who reduced it to rules. They had many disciples, better known under the name of sophists, of whom we shall speak in the sequel.

PLATO

THOUGH Plato seems to have undertaken to discredit rhetoric, he justly deserves to be ranked in the number of the most excellent rhetoricians, having only censured and ridiculed those who dishonoured this art by the abuse of it, and the bad taste of eloquence they endeavoured to introduce. The solid

* Illud in primis testandum est, nihil præcepta atque artes valere nisi adjuvante natura. *Quintil. l. i. in Pream.*

* Non esse eloquentiam ex artificio, sed artificium ex eloquentia natum. 1. *De Orat. n. 146.*

Initium dicendi dedit natura; initium artis observatio. *Quintil. l. iii. c. 2.*

* Quintil. l. iii. c. 1. Cic. in Brut. n. 46

and judicious reflections, which we find in several of his dialogues, especially in the *Phædrus* and *Gorgias*, may be considered as a good rhetoric, and contains the most important principles of it.

ARISTOTLE.

ARISTOTLE is acknowledged with reason to be the chief and prince of rhetoricians. His *Rhetoric*, divided into three books, has always been considered by the learned as a masterpiece, and the most consummate treatise that ever appeared upon this subject. We are indebted for this work to its author's jealousy, or rather emulation. Isocrates, at that time very old, taught eloquence at Athens with extraordinary success, and was followed by a great number of illustrious disciples: I might for that reason have given him a place amongst the rhetoricians, but I defer speaking of him to another title. So shining a reputation alarmed Aristotle. By a happy parody on a verse of a Greek tragedy, he said to himself, "It is a shame for me to keep silence, and let Isocrates speak."

Ἀλεξάνδρῳ σπουδᾷ, Ἰσοκράτην δὲ διὰ λίσσιν.

Till then he had solely taught philosophy; which he continued to do only in the mornings, and opened his school in the afternoon, to teach pupils the precepts of rhetoric.

It appears that Aristotle composed several works upon rhetoric.¹ Cicero speaks in more than one place of a collection,² in which this philosopher had inserted all the precepts of that art which had appeared from Tisias, whom he considers as the inventor of it, to his own times; and had treated them with such elegance, perspicuity, and order, that people no longer had recourse to their authors for them, but only to Aristotle.

Immediately after Aristotle's *Rhetoric*, consisting of three books, there is another, entitled *Rhetorica ad Alexandrum*, as addressed to Alexander, and composed expressly for him. But all the learned agree that it is not Aristotle's. He had composed some books upon this subject in the name of Theodectes. What Valerius Maximus relates on this head, would do no honour to Aristotle, if it were true. He tells us, that, to please Theodectes, one of his disciples, for whom he had a particular regard, he had made him a present of these books, and given him leave to publish them in his own name; but that afterwards repenting his having inconsiderately transferred his glory to another, he declared himself the author of them. Accordingly he cites them as his in his *Rhetoric*.³ It continued a doubt to the time of Quintilian,⁴ whether this work was written by Aristotle or Theodectes. However it may be, his *Rhetoric*, which is come down to us, and which nobody disputes being his, is the most generally esteemed of all his works, for its wonderful order, the solidity of the reflections incorporated with the precepts, and the profound knowledge of the human heart, which appears particularly in his treatise upon the manners and passions. Masters whose province it is to teach youth eloquence, cannot study so excellent a book too much. The same may be said of his *Poetics*.

ANAXIMENES.

ANAXIMENES of Lampsacus is generally taken for

¹ Itaque ipso Aristotele, cum florere Isocratem nobilitate discipulorum videret—mutavit repente totam philosophiam prope discipulum suum, versutem quemdam de Philoctete paulo secus dixit. Ille enim tacere ait sibi esse turpe cum barbaris; hic autem, cum Isocratem pateretur dicere. *De Orat.* l. iii. n. 144.

² Isocrates præstantissimi discipuli fuerant in omni studiorum genere: eoque jam seniore—pomeridianis scholis Aristoteles præcipere artem oratoriam cepit. *Quinct.* l. iii. c. 1.

³ De Invent. l. ii. n. 6. *De Orat.* l. ii. n. 100.

⁴ Nominatim ejusque præcepta magnâ conquistâ curâ perspicuè conscripsit, atque enodata diligenter exposuit; ac tantum inventoribus ipsis suavitatem et brevitate dicendi præstitit, ut nemo illorum præcepta ex ipsorum libris cognoscatur: sed omnes, qui, quod illi præcipiant, velint intelligere, ad nunc quasi ad quemdam multo commodiorem explicatorem convertantur. *De Invent.*

¹ *Lib.* iii. c. 8. p. 593.

² *Quinctil.* l. ii. c. 15

the author of the rhetoric addressed to Alexander. It has its merit, but is very much inferior to that of Aristotle. He wrote upon many other subjects.

DIONYSIUS HALICARNASSUS.

DIONYSIUS HALICARNASSUS is of the first rank amongst the historians and rhetoricians. I consider him in this place only under the latter denomination.

Soon after Augustus had terminated the civil wars, about the 187th Olympiad, and twenty-eight years before Jesus Christ, Dionysius of Halicarnassus came to settle at Rome, where he resided twenty-eight years. It is believed, from some passages in his writings, that he taught rhetoric there either publicly or in private. All that he wrote upon this head is not come down to us. We have a treatise of this author upon "the disposition of words," another upon the *Art*; a third, which is not perfect, "of the characters of the ancient writers," and especially the orators. In the first part he speaks of *Lysias*, *Isocrates*, and *Isæus*; in the second he treated of *Demosthenes*, *Hyperides*, and *Æschines*; nothing remains of it, but what relates to Demosthenes, nor is that fragment entire. He adds also something on Dinarchus. Two letters follow: the one to Ammæus, wherein he examines "whether Demosthenes formed himself upon Aristotle's rhetoric;" the other to one Pompeius, wherein "he gives an account of what he thinks vicious in Plato's diction." We have still his *comparisons* of Herodotus and Thucydides, Xenophon, Philistus, and Theopompus. And lastly, we have his reflections upon "what forms the peculiar character of Thucydides." The end of these last works is to make known the characters of the authors of whom he speaks, and to show wherein they are and are not imitable. What we have of this author's is not therefore a rhetoric in form, but fragments of rhetoric, or certain points of that art, which he thought fit to treat.

His inquiry into the most celebrated writers of antiquity, and the judgment he passes on them, may be of great use in forming the taste. It is true, we are shocked at first with the liberty he takes in arraigning certain articles of Plato and Thucydides, for whom in other respects he professes the highest esteem and regard. It would be very useful, and not disagreeable to the reader, to enter into the exact discussion of his judgments, and to examine, without prejudice, and with attention, whether they are or are not founded in reason and truth. Neither the plan of my work, nor the mediocrity of my talents, admit me to think of such an undertaking. Our author declares in several passages, that it is neither the desire to exalt himself, nor to depreciate others, that guide him in his criticisms, but the sincere intent of being useful to his readers: which is a happy disposition for forming right judgments.

A very short fragment which remains of his, shows us his motive for composing his treatise on rhetoric: this was the desire of contributing to the establishment of good taste in regard to eloquence. From the death of Alexander the Great, king of Macedon, it had suffered great alterations in Greece, and by an imperceptible, but always increasing, decline, it was at last sunk to such an ebb, that it could scarce be known for itself. We shall see in the sequel, that this alteration and decay began by Demetrius Phalereus. Instead of that manly and natural beauty, that noble and ancient simplicity, that air of dignity and grandeur, which had acquired it universal respect and unlimited empire over the minds and passions of mankind; its rival, false eloquence, from the delightful regions of Asia, tacitly laboured to supplant it, made use of paint and glaring colours for that purpose, and assumed such ornaments as were best suited to dazzle the eyes, and illude the mind. This last-comer, with no other merit than that of a splendid but vain attire, though a stranger, at length established herself in all the cities of Greece, to the exclusion of the other, a native of the country, who saw herself exposed to the oblivion, contempt, and even insults of those, who had formerly so long and so justly admired her. Our author, on this point, compares Greece to

a house wherein a concubine of art and address, by her charms and insinuations, has gained an entire ascendancy over the husband, has introduced disorder and depravity, and governs without control; while the lawful wife, become in some measure a slave, has the affliction to see herself despised and neglected, and is every day reduced to suffer the most sensible affronts and indignities. He observes with joy, that sound eloquence has for some time resumed her ancient credit, and compelled her rival in her turn to give her place. All he says here regards Greece; and he ascribes so happy a change to the good taste which then prevailed at Rome, whence it had already diffused itself, and daily would continue to do so more and more, into all the cities of Greece, that emulated each other in imitating the example of the reigning city. It was to contribute to this revival of eloquence in his country, that Dionysius Halicarnassus composed all his books upon rhetoric: a laudable motive, and well worthy of a good and zealous citizen.

HERMOGENES.

HERMOGENES was a native of Tarsus in Cilicia, and lived in the reign of Marcus Aurelius Antoninus.¹ That prince having had the curiosity to hear his lectures, was charmed with them, and made him great presents. He began to profess rhetoric at the fifteenth year of his age; and was but eighteen when he composed his book upon it, which is esteemed a very good work by the learned. But by a very singular event, at the age of twenty-four, he became stupid, and continued so during the rest of his life. He died in the beginning of the third century.

APHTHONIUS.

APHTHONIUS lived about the end of the second age of the church, or the beginning of the third. Instead of writing upon rhetoric, as others had done, only for those who had made some progress in the knowledge and use of that art, in order to perfect them in it, Aphthonius wrote solely for children, his precepts extending no farther than the compositions he believed it necessary for them to make, to prepare them for what was greatest in eloquence.

LONGINUS.

DIONYSIUS LONGINUS was a native of Athens, but by descent of Syria. Though he excelled very much in philosophy, Plotinus says, that he was less a philosopher than a man of letters; and indeed it was by the latter particularly he acquired the greatest reputation. He had great erudition, and the most refined, exact, and solid discernment in judging works of wit, and pointing out their beauties and defects.

Of all his works, time has left us only his treatise *of the sublime*, which is one of the finest fragments of antiquity. We have Mr. Boileau's excellent translation of it, which has more the air of an original than a copy, has made all the world judges of its merit, and has justified the general esteem the learned always had for its author. Cæcilius, who lived in the time of Augustus, had before composed a treatise upon the Sublime: but he had contented himself with explaining what it was, without laying down any rules for attaining that sublimity, which does not so much persuade, as ravish and transport the mind of the reader. It is the latter point Longinus undertakes to treat in his work. Among the examples which he gives of this shining and magnificent manner of style, he speaks of Moses in these terms: "The legislator of the Jews, who was no common person, having extremely well conceived the grandeur and power of God, expresses them in all their dignity in the beginning of his laws, in these words: 'God said, Let there be light, and there was light.' Let the earth be and the earth was."²

Longinus taught Zenobia the Greek language, who espoused the celebrated Odenatus, king of Palmyra, and afterwards emperor of the Romans. It is said³ that he advised that princess to write the haughty letter she sent the emperor Aurelian, during the siege of Palmyra; and that it was for that reason Aurelian caused him to be put to death.⁴ He suffered that sentence with great fortitude, consoling those who expressed their grief for his destiny.

DEMETRIUS.

THERE is a treatise in Greek upon *Elocution*, which though a very small fragment of rhetoric, is however of sufficient value to do honour to its author, and is ascribed to a person whose name reflects no less honour upon the work: this is the famous Demetrius Phalereus, so called from the Athenian port Phalereus, where he was born. The critics do not however entirely agree that this work was his; some of them attribute it to Demetrius Alexandrinus, an author of much later date than the former; and others believe it to have been written by Dionysius Halicarnassus. Mr. Gibert proves, by a very judicious examination of the work itself, its style and principles, that it was not composed by Demetrius Phalereus.

ARTICLE II.

OF THE LATIN RHETORICIANS.

IT was not without difficulty and opposition, that the Latin rhetoricians succeeded in establishing themselves at Rome. It is well known that this city, solely intent in the first ages upon establishing its power, and extending its conquests, did not apply itself at all to the study of the polite arts and sciences. Four or five hundred years elapsed, before they were in any esteem at Rome. Philosophy was absolutely unknown there, as well as all other eloquence but that which proceeds from nature and happiness of genius, without the aid of art or precepts.⁵ The Grecian philosophers and rhetoricians who went to Rome, carried thither with them that taste for the arts which they professed. We have seen, that Paulus Æmilius,⁶ in the tour he made into Greece after having conquered Perseus the last king of Macedonia, demanded of the Athenians, that they would choose him an excellent philosopher to finish the education of his children. This custom had taken place for some time before at Rome;⁷ but was soon interrupted by an edict, passed in the consulship of Strabo and Messala, by which it was decreed, that all philosophers and rhetoricians should quit Rome; exercises in their way, unknown till then, giving offence to the state.⁸

Five or six years after this edict⁹ ambassadors arrived at Rome from Athens upon a particular affair. All the young Romans, who had any taste for study, went to visit them, and were transported with admiration on hearing them discourse.¹⁰ Carneades especially, one of those ambassadors, in whose eloquence force united with grace and delicacy, acquired extraordinary reputation. The whole city rung with his praise. It was the universal talk, that a Greek of admirable talents had arrived; that his great knowledge made him more than man; and that his equally animated and delightful eloquence inspired such an ardour for study in youth, as induced them to renounce all other pleasures and avocations. The Romans saw with great satisfaction their children, passionately attached to these wonderful persons, addict themselves to the Greek erudition. Cato only, as soon as this love of learning began to gain ground in the city, was

imply some effort, and a succession of time; whereas the terms, "Que la lumière soit, et la lumière fut;" "Let there be light, and there was light," express better a rapid obedience to the Lord of Nature's command.

¹ Aurel. Vict. in Aurel.

⁴ Zos. l. i.

¹ Philostr. de vit. Sophist. l. ii. p. 575.

² In the French the words are, Que la lumière se fasse, et la lumière se fit; Que la terre se fit, elle fut faite. Mr. Rollin says, there is more energy and sublimity in the Hebrew, which has literally, "Que la lumière soit, et la lumière fut;" "Let there be light, and there was light;" exactly as in the English version. The word "faire," continues he, seems to

imply some effort, and a succession of time; whereas the terms, "Que la lumière soit, et la lumière fut;" "Let there be light, and there was light," express better a rapid obedience to the Lord of Nature's command.

much concerned at it; apprehending, that the ambition and emulation of youth might be engrossed by it, and that in consequence they might prefer the glory of speaking, to that of acting well. But when he saw that the discourses of these philosophers, translated into Latin by one of the senators, were in great vogue throughout the whole city, and were read with universal applause, he employed all his credit in the senate to terminate the affair which had brought the ambassadors to Rome, and to hasten their departure. "Let them return to their schools," said he, "and teach there as long as they please, the children of the Greeks: but let the Roman youth hear nothing within these walls except the laws and the magistrates, as they did before their arrival." As if the study of philosophy and eloquence was incompatible with obedience to the laws and magistrates.

The departure and absence of these philosophers did not extinguish the ardour for study, which their discourses had inspired.¹ The taste for eloquence became the universal passion of the Roman youth; and far from abating the desire of military glory, as Cato had apprehended, it only served to exalt its value and merit. We may judge of this from what history tells us of Scipio Africanus, who lived at that time. He was of so refined and delicate a taste in regard to polite learning, that, as well as Lælius, he was suspected of having some share in writing Terence's comedies, the most perfect work we have of the kind. He had always with him persons of the first rank in learning, as Panætius and Polybius, who accompanied him even in the field.² The latter informs us, that Scipio, while very young, and consequently even at the time we speak of, had a very strong inclination for the sciences, and that a number of learned men of every kind came daily from Greece to Rome. Now was Scipio the worse captain, for having been a man of letters?

From that time the study of eloquence, during almost fifty years, was so highly esteemed at Rome, that it was regarded as one of the most effectual methods for attaining the highest dignities in the commonwealth. But it was taught only by the Greek rhetoricians: whence all the exercises, by which the youth were formed, were made in a foreign language, and in the meantime that of the country, namely the Latin tongue, was almost universally neglected. Who does not perceive how much this custom, if I may venture to say so, was contrary to right reason and good sense? For after all, it was in Latin that these young persons were one day to plead at the bar, to harangue the people, and give their opinions in the senate: it was therefore in Latin they ought to have been taught to speak and compose. I do not say, that it was necessary to exclude compositions in Greek. As they could find no perfect models of eloquence but in the Greek orators, it was absolutely proper for them to study that language thoroughly, and to compose in Greek, in order to form themselves upon such excellent models. Cicero used this custom, even when more advanced in years, for which he gives this reason: "I did this," says he, "because the Greek language, supplying more ornaments, accustomed me to compose in the same manner in Latin. Besides studying under such great masters of eloquence, who were all Greeks, it would not have been in their power to have instructed and corrected my compositions, if I had not made them in Greek."³ But he tells us, that he united them also with Latin exercises, though less frequently. I have said that Cicero was at that time somewhat advanced in life. For we shall soon see, that he composed his first studies only in Greek, the Latin rhetoricians not being yet established at Rome, or having but very lately begun to teach there. This it is time to explain,

with which I shall introduce my account of the Latin rhetoricians, of whom I am to speak in this article

L. PLOTIUS GALLUS.

CUSTOM has a kind of despotic sway, and does not give place even to reason and experience without exceeding difficulty. Suetonius,⁴ upon the authority of Cicero, in a letter which is lost, informs us, that L. Plotius Gallus was the first who taught rhetoric at Rome in the Latin tongue.⁵ This he did with great success, and had a great concourse of hearers.

Cicero, at that time very young, studied rhetoric, but under Greek masters, who alone till then had taught it at Rome.⁶ He had acquired so great a reputation among his fellow-pupils, that out of particular distinction, and to do him honour, when they left the schools, they always placed him in the midst of them; and the fathers of those children, who every day heard them extol the poignancy of his wit, and the maturity of his judgment, went expressly to the schools to be witnesses of them in person, not being able to believe all the great things related of him.

It was at this time Plotius opened a rhetoric-school at Rome.⁷ All the Roman youth, that had the least taste for eloquence, were passionately fond of hearing him. Cicero, then but fourteen years old, would gladly have followed that example, and improved from the lessons of this new master, whose reputation was very great throughout the whole city; and was sensibly concerned on being debarred that liberty. "I was prevented," says he, "by the authority and advice of the most learned persons, who were of opinion, that the exercises of rhetoric in the Greek tongue were better adapted to forming the minds of youth." It is not to be doubted, that Cicero means Crassus, in this place:⁸ he explains himself more clearly in another, where he says, that while he was very young, he studied with his cousins, the sons of Aculeo, under masters chosen according to the taste and advice of Crassus.

The Latin rhetoricians were in great esteem at Rome, and their schools much frequented: but a terrible storm soon rose up against them.⁹ The censors, Domitius Æuobarbus and Licinius Crassus, passed an edict in regard to them, the tenor of which Suetonius has preserved.¹⁰ "We have been informed," say those censors, "that there are persons, who, under the name of Latin rhetoricians, set themselves up for teachers of a new art, and that youth assemble in their schools, where they pass whole days in idleness. Our ancestors have delivered down to us, what they desired their children should be taught, and to what schools they should go. These new establishments so opposite to the customs and usages of our forefathers, are not pleasing to us, and appear contrary to discipline and good order. Wherefore we think it incumbent on us to notify this our opinion, as well to those who have opened such schools, as to such as frequent them, and to declare that such innovation is not agreeable to us."

The Crassus of whom I have hitherto spoken, is one of the persons whom Cicero introduces in his books *De Oratore*. That dialogue is supposed to have passed two years after the censorship of Crassus, An. Rom. 662. Ant. J. C. 90. He makes an apology in it for his edict against the Latin rhetoricians. "I silenced them," says he, "not to oppose as some have reproached me, the progress of youth in eloquence, but on the contrary, to prevent their minds from being corrupted and stupified, and their contracting presumption and impudence. For indeed I observed, that among the Greek rhetoricians how indifferent soever their merit, besides the exer-

¹⁰ De clar. Orat. n. 310.

else of speaking, in which their profession properly consists, there always was a fund of solid and estimable knowledge. But I did not conceive that our youth could acquire any thing under these new masters, unless it were boldness and confidence, always blameable, even when united with other good qualities. As this, therefore, was all they could learn of them, and their schools, to speak properly, were only schools of impudence, I thought it my duty, as censor, to put a stop to such abuses, and prevent their pernicious consequences."¹

All I have hitherto said, proves how liable, in point of erudition and science, new methods and establishments are to obstacles and contradictions, even from persons of the greatest merit, and of the best intentions in other respects. But utility and truth at last prevail, and open themselves a way through all the difficulties that oppose them. When these storms and troubles are blown over; when prejudices, frequently blind and precipitate, have given place to serious and calm reflection; and things are examined with temper and in cool blood, we are surprised that practices so useful in themselves should have been capable of meeting with such opposition. This is the fate, though of a different kind, the philosophy of Descartes experienced among us, which was at first attacked so warmly, and is now almost universally approved. The same happened at Rome in regard to the Latin rhetoricians. They perceived at length how consistent it was with right reason and good sense, to form and exercise youth for eloquence in the language they were always to speak: and after these first shocks, the schools of the Latin rhetoricians were established in tranquillity, and did not a little contribute to the amazing progress of the study of eloquence in the succeeding years.

The Greek rhetoricians, however, were not neglected, and had a great share in the improvement of which I have been speaking. It is surprising to consider the ardour and passion, with which the Roman youths, and even some of more advanced years, went to hear these masters. Cicero had begun to appear at the bar in his twenty-sixth year.² His pleadings for S. Roscius Amerinus acquired him an extraordinary reputation. Molo, the celebrated Greek rhetorician, came to Rome about this time as a deputy from the Rhodians. Cicero, highly capable as he already was, became his disciple, and thought himself happy and honoured in receiving lessons from him. After having pled two years, his health, or perhaps reasons of policy, having obliged him to suspend his application to business,³ and to make a voyage into Greece and Asia, besides the several masters of eloquence whom he heard at Athens and elsewhere, he went expressly to Rhodes to put himself again under the discipline of Molo: in order that so excellent a master might take pains in reforming, and in a manner, in new moulding his style: *Apollonio Moloni se Rhodi rursus formandum ac velut recoquendum dedit.*⁴ Molo⁵ was an exceeding good pleader, and composed very finely: but his principal happiness lay in discerning and exploding

the defects in the style of those, who applied themselves to him, and he had a wonderful happiness in correcting them, by the wise advice and solid instructions he gave them. He endeavoured, for I dare not say he effected it, (says Cicero) to correct and restrain a vicious redundancy in my style, which too licentiously overflowed its just bounds, and taught me not to abandon myself to the impetuosity of my years, and the fire of an imagination, that wanted maturity and experience. Cicero confesses, that from that time, a great alteration took place in his manner, as well in regard to the tone of his voice, which he exerted no longer with so much vehemence, as his style, which became more exact and correct. These young Romans must have had a very warm desire to improve themselves in eloquence; to take so much pains in going to hear the rhetoricians, and not to blush, though already in great reputation, to become their disciples again, and to confess their still having occasion for their aid. But, on the other side, the merit of such rhetoricians must have been very solid and well established, to have acquired so great a confidence in it, and to have supported the idea, which such persons as Cicero conceived of it.

Plotius, the first of the Latin rhetoricians, who gave occasion for what I have said hitherto, had without doubt colleagues and successors, who acquitted themselves of the same function with honour. Suetonius mentions several: but as they are little known, I proceed directly to Cicero, who indeed did not immediately teach eloquence as a master, but has left us excellent precepts upon it.

CICERO.

CICERO, by his treatise upon rhetoric, has justly merited the honour of being placed at the head of the Latin rhetoricians; as he has by his orations that of the first rank amongst the orators. His tracts upon rhetoric are: *Three books de Oratore*; one book entitled, simply, *the Orator*; a *Dialogue*, entitled *Bru tus upon the Illustrious Orators*; two books upon *In vention*; the *Partes Oratoricæ*, the *Complete Orator*, and the *Topics*. In this enumeration of Cicero's works upon eloquence, I do not follow the order of time in which they were composed.

I. The three first are absolute masterpieces, in which what was called the *Roman urbanity*, *Urbanitas Romana*, prevails in a supreme degree, which answers to the Atticism of the Greeks, that is to say whatever was finest, most delicate, most animated, and in a word, most consummate as to thought, expression, and genius. The three books of the *Orator* are, properly speaking, Cicero's rhetoric: not a dry rhetoric, stuck with precepts, and destitute of grace and beauty, but one that, with the solidity of principles and reflections, unites all the art, delicacy, and ornament, of which a subject of that nature is susceptible. He composed this work at the request of his brother Q. Cicero, who desired to have something more perfect of his than the books upon invention, which were the first-fruits of his youth, and by no means worthy the reputation he afterwards attained.⁶ To avoid the air and dryness of the schools, he treats this subject in dialogues, wherein he introduces as speakers the greatest and most famous persons Rome had for wit, erudition, and eloquence. The time wherein these dialogues are supposed to be held, is the 662d year from the foundation of Rome, and ninety years before Jesus Christ, in the consulship of L. Marcus Philippus, and Sextus Julius Cæsar.

This manner of writing, I mean dialogue, is extremely difficult: because, without mentioning the variety of characters, which must everywhere be equally sustained without the least deviation from them, two things that seem almost incompatible must unite in them, the simple and natural air of familiar discourse, with the elegant style of the conversation of persons of wit. Plato, of all the ancient authors, is generally conceived to have succeeded best in dia-

¹ Etiam Latini, si diu placet, hoc biennio magistri dicendi existerunt; quos ego censor edicto meo sustuleram: non quo (ut nescio quos dicere aiebant) aculi ingenia adolescentium nollem; sed contra, ingenia obtundi nolui, corroboraui impudentem. Nam apud Græcos, cuiuslibet modo esset, videbam aliquam et humanitatem dignam sustentia. Hos verò novos magistros nihil intelligebam posse docere, nisi ut auderent: quod etiam cum bonis rebus conjunctum, per se ipsum est magnopere fugiendum. Hoc cum unum traderetur, ut cum impudentis ludus esset, putavi eas censoris, ne longius id serperet providere. *Lib. iii. de Orat. n. 93, 94.*

² De clar. Orat. n. 312.

³ Ibid. n. 315, 316.

⁴ Quintil.

⁵ Quibus non contentus, Rhodum veni, meque ad eundem, quem Romæ audiveram, Molonem applicavi: cum actorem in veris causis, scriptoremque, præstantem, tum in notandis animadvertendisque vitiis, et instituendo docendoque prudentissimum. Is dedit operam (si modò id consequi potuit) ut nimis redundantes nos et superfluentes juvenili quadam dicendi impunitate et licentia, reprimere, et quasi extra ripas diffuentes corceret. Ita recepi me, biennio post, non modo exercitator, sed prope mutatus. Nam et contentio nimis vocis roderat, et quasi deferberat oratio. *Declar. Orat. n. 316.*

⁶ Vis enim, quoniam quædam pueris aut adolescentulis nobis ex commentariis nostris inchoata atque rudia exciderunt, vix hoc ætate digna et hoc usu—alioudi isdem de rebus politius a nobis perfectiusque proferri. *De Orat. l. i. n. 5.*

ogue. But we may indisputably give Cicero an equal rank with him, to say no more, especially in the treatises of which we now speak. I do not know whether my esteem and love for an orator, with whom I might say I have been brought up from my earliest infancy, prejudice and blind me in his favour; but, in my sense, there is in these conversations a taste, a salt, a spirit, a grace, a native elegance, that can never be sufficiently admired.

The third of the books I speak of treats, among other subjects, of the choice and order of words, a dry and disagreeable topic in itself, but of great use to the Roman eloquence, and which more than any thing shows the profound genius and extent of mind of this orator. When he came first to the bar, he found the Roman eloquence absolutely destitute of an advantage, which infinitely exalted that of the Greeks, to which he had devoted his whole application, and of which he knew all the beauties, as well as if it had been his native tongue, so familiar had he made it to him by close and profound study. This advantage was the sound, number, cadence, and harmony, of which the Greek is more susceptible than any other language, and which give it an incontestable superiority in this view to them all. Cicero, who was extremely zealous for the honour of his country, undertook to impart to it this advantage, of which till then the Greeks had been in sole possession. He perceived that words, like soft wax, have a flexibility wonderfully capable of receiving every kind of form, and of being adapted to whatever manner we please.¹ The proof of which is, that for all the different species of verse, which are very numerous; for all the diversity of styles, the simple, the florid, and the sublime; for all the effects which speech is capable of producing, to please, to convince, to move; words of a different nature are not employed; but taken from one common heap, to use the expression, and alike disposed for every use, they lend themselves at the poet's and orator's discretion, to be applied in whatever manner they think fit. Cicero well convinced of this principle, of which the reading and study of the Greek authors had given him a sensible proof, or rather which he had extracted from nature itself, undertook to add this charm to the Latin language, of which, before his time, it was entirely destitute. This he effected with such success and promptitude, that in a few years it assumed a quite new form, and, what has no parallel, attained almost instantly a supreme perfection in this way. For every body knows, that generally the progress of arts and sciences is slow, and that they do not attain their final maturity but by degrees. This was not the case in the matter of which we are speaking, namely, the number and harmony of speech. Cicero seized almost immediately the fine and the perfect, and introduced into his language, by the happy arrangement of his words, a sweetness, grace, and majesty, which almost equalled the Greek; and with which the ear, of all who have the least sensibility for sound and harmony, is still agreeably soothed. It is not surprising, therefore, that this great orator, to secure to his language the advantage he had acquired it, and to perpetuate the use and possession of it, should think it incumbent on him to treat this subject in all its extent. Accordingly he enters upon it with a vast enumeration of things, which cannot afford us any pleasure now, to whom this is a foreign language, but which was extremely useful and important at the time he wrote it; and it is easy to perceive, that he has treated it with particular attention, and has employed the whole extent of his learning and capacity, to display it in all

its light. Accordingly, Quintilian observes, that of all his works of rhetoric, this piece is the most elaborate.²

The same service has been done the French language; and, if I mistake not, Balzac was the first who discerned himself, and made others discern, how susceptible it is of the graces of number, harmony, and cadence. Since his time, this part of composition has been very much improved: Mr. Flechier particularly, and all our good writers, leave us nothing to desire in this point. It is highly important to make youth attentive to it, and to accustom their ears to a lively and instantaneous discernment of what is sweet and agreeable, or harsh and dissonant in the disposition of words. The treatise lately published by the Abbé Olivet, upon the prosody of the French tongue, may be of great use to this purpose.

I have already said, that the three books *De Oratore* may be considered as the rhetoric of Cicero. And indeed he has included in it almost all the precepts of that art, not in the common didactic order of the schools, but in a more free manner, and one that seems less studied; to which he has annexed reflections that infinitely exalt their value, and show their just use.

II. The book entitled *the Orator*, does not give place to the former either in beauty or solidity. Cicero states in it the idea of a perfect orator, not of one that ever was, but of such a one as may be. He sets a particular value upon this work, and seems to think of it with great satisfaction and complacency; and does not hesitate to own, that he employed the whole extent of his wit, and all the force of his judgment in composing it; which is saying a great deal. He explains himself to this effect in writing to a friend, who had highly approved of the work, and consents that whatever judgment the public formed of it, whether good or bad, shall determine the author's reputation.³ He adds, (which I mention for the sake of our youth) that he should be glad if young Lepta, who was his friend's son, begins so early to read works of that kind with some pleasure: because though his years did not admit his making all the improvement they were capable of affording, it was of some consequence to him to be early affected with lessons of that sort.

III. The *Brutus* of Cicero is a dialogue concerning the most famous Greek and Roman orators, who had appeared to his time: for he mentions none who were then alive, except Cæsar and Marcellus. This work was composed some time before the former, and perhaps in the same year. In the long enumeration contained in this book, wherein Cicero particularly remarks upon the style of a great number of orators, there is an admirable variety of portraits and characters, which all relate to the same subject, without however resembling each other in the least. He intersperses reflections, and a kind of digression, from time to time, which add to the value of the piece, and may be of great use in forming the orator.

IV. His treatise upon *the most perfect kind of Oratory*, is very short. Cicero maintains in it, that the Attic style is by far the most perfect, but that it includes the three different kinds of eloquence, and that the orator makes use of them as his subject requires.

To convince those of this who are of a different opinion, he translated the celebrated orations of *Æschines* against *Demosthenes*, and of *Demosthenes* against *Æschines*. The work we now speak of was only a kind of preface to that translation, of which we cannot sufficiently regret the loss.

V. The *Topics* of Cicero contain the method of finding arguments by the means of certain terms, which characterize them, and are called *Topics*, *Locus*,

¹ Nihil est tam tenerum, neque tam flexibile, neque quod tam facile nequatur quocumque ducas, quam oratio. Ex hac versus, ex eadem disparet numeri conficiuntur: ex hac etiam soluta variis modis multorumque generum oratio. Non enim sunt alia sermonis, alia contentiones verba; neque ex alio genere ad usum quotidianum, alio ad scenam pompeque amittuntur: sed ea noscum jacentia suntuilimus è medio, sicut molliissimam ceram ad nostrum arbitrium formamus et fingimus. Itaque tum graves sumus, tum subiles, tum medium quiddam tenemus: sic institutam nostram sententiam sequitur orationis genus, idque ad omnem rationem, et aurium voluptatem, et animorum motum mutatur et fecitur. *De Orat.* l. iii. n. 176, 177.

² Cui (M. Tullio) nescio an ulla pars hujus operis sit magis elaborata. *Ibid.* l. c. 4.

³ Oratorem meum tantopere à te probari vehementer gaudeo. Mihi quidem super gaudeo, me, quicquid habuerim judicii, in illum librum contulisse. Qui si est talis, qualem tibi videri scribis; ego quique aliquid cum. Sine alter, non recuso quin, quantum de illo libro, tantundem de judicii mei fama detrahatur. Leptam nostrum empro delectari jam talibus scriptis. Etsi abest maturitas etatis, jam tamen personare aures ejus hujusmodi vocibus non est inutile. *Epist.* xix. l. 6. ad Famil.

common places of Rhetoric, or of Logic. We are indebted for the invention or perfection of this art to Aristotle. Cicero composed this treatise at the request of Trebatius the lawyer, one of his friends, to explain that written by the philosopher upon this subject. There is one thing remarkable in this work, which shows the genius, memory, and facility of Cicero in composing; namely, his not having that philosopher's book, when he undertook to explain him. He was upon a voyage and at sea, as he tells us himself in this book.¹ He recalled to his remembrance Aristotle's work, explained it, and sent what he had done to his friend. He must have known it perfectly well, and have had it very strongly in his mind, to have worked upon it only from his memory.

VI. The *Partes Oratoriæ* are a very good rhetoric, disposed in divisions and subdivisions of subjects (whence it takes its title.) Its style is very simple, but clear, succinct, and elegant, and well adapted to the capacity of beginners; so that, with the addition of examples, it might be used with success, though Cicero did not think proper to annex any to it.

VII. The books of Rhetoric, or *De Inventione Oratoria*, are certainly Cicero's. Only the two first remain: the two others are lost.² I have already observed, that he composed them during his youth, and that he afterwards thought them unworthy his reputation.

THE RHETORIC INSCRIBED TO HERENNUS.

IT is not easy to know who was the author of the four books of rhetoric inscribed to *Herennius*, which we find in the front of Cicero's works. In the common editions the title says it was not known; but some of the learned ascribe them to Cornificius. It is a rhetoric in form, of which the style, though simple and familiar, is pure and Ciceronian; which has given some people reason to believe it a work of Cicero's: but this opinion admits of great difficulties.

SENECA THE RHETORICIAN.

SENECA, of whom we speak in this place, was born at Corduba in Spain, about the 700th year of the city of Rome, fifty-three years before Jesus Christ. His surname was *Marcus*. He came to settle at Rome in the reign of Augustus, whither he brought with him his wife *Helvia*, and three sons. The first, called *Mela*, was the father of the poet *Lucan*; the philosopher's name was *Lucius*; and the third son's *Novatius*; but this last being adopted into another family, he took the name of his father by adoption, *Junius Gallio*. Mention is made of him in the *Acts of the Apostles*.³

Seneca, the father, collected from more than an hundred authors, as well Greeks as Romans, whatever was most remarkable, that they had either said or thought upon the different subjects they had treated in emulation of each other, by way of exercising their eloquence according to the custom of these times. Of the ten books of *Controversies* or *Disputations*, contained in this collection, scarce five remain, and these very defective. To the books of controversies, one of deliberations is prefixed, though it is known, that Seneca did not publish it till after the former.

These works of Seneca's give Mr. Gibert occasion to explain with great order and evidence the esteem and use in which declaiming was held of old. I shall insert in this place that little tract almost entirely; which will be of great service for the understanding of what will be said in the sequel, upon the manner in which the rhetoricians formed young persons for eloquence.

Declamation is a word which occurs in *Horace*,⁴ and still more in *Juvenal*:⁵ though it was not known at Rome before Cicero and Calvus.⁶ The compositions

were so called, by which eloquence was exercised, and of which the subjects, true or feigned, were sometimes in the deliberative, sometimes in the judiciary, and seldom in the demonstrative kind. The discourses made upon these subjects were an image of what passed in the public councils and at the bar. Declaiming was the method taken by Cicero while young to become an orator, which at that time he practised in Greek.⁷ He continued to use it, when more advanced in years, but in Latin. He exercised himself in the same manner even when the troubles of the state had obliged him to abandon the bar.⁸ At that time he repeated to *Cassius* and *Dolabella*, or others, the harangues of this kind, which he had composed by way only of exercise. This was the common method of all who aspired at eloquence, or were willing to acquire perfection in it; that is to say, the principal persons of the state. They applied themselves to it under the direction of Cicero, and improved themselves by his advice. "*Hirtius* and *Dolabella*," says Cicero, "come often to declaim at my house, and I as often go to sup with them."⁹ They came to him either to repeat or correct their discourses; after which he went home with them to supper, their tables being better than his own. Pompey the Great applied himself also very closely to declamation a little before the civil wars, to enable himself to answer *Curio*, who had sold his talent to *Cæsar's* interests, and gave the opposite party great disquiet.¹⁰ Mark Antony did the same to reply to Cicero, and Octavius, even at the siege of *Modena*, did not omit this exercise. We must remember, that at Rome, whether in the senate or before the people, eloquence generally determined the most important affairs, and thereby became absolutely necessary to those who aspired at being powerful in them. I omit Cicero's son *Marcus*, who exercised himself also both in Greek and Latin, but not with the same success.¹¹ *Demetrius Phalereus* is said to have been the inventor of declamation: and *Plotius Gallus*, of whom we have spoken above, was the first who introduced the use of it into the Latin tongue.

It was, according to this idea of declamation, that all the lovers of eloquence, whether Greeks or Romans, assembled in the houses of persons eminent in the same way; such for instance as Seneca, where they pronounced discourses upon subjects before agreed upon. Our author had the greatest memory conceivable.¹² He cites several examples of a like nature. *Cynæas*, *Pyrrhus's* ambassador, having had audience of the senate upon his arrival, the next day saluted all the senators, and people who had been present at it in great numbers, by their names. A certain person having heard a poem repeated, to surprise the author of it, pretended it was his work, and to prove it, repeated the whole without hesitating, which the author could not do himself. *Hortensius*, in consequence of a challenge, staid a whole day at a sale of goods by auction, and at night repeated, in the order they were sold, without the least mistake, the names of the several movables, and of the persons that bought them. Seneca's memory was scarce less admirable. He says, that in his youth he repeated two thousand words after having only heard them once over; and that too in the same order they had been spoken. By this wonderful talent, whatever was most curious in all the declamations he had ever heard, was so strongly impressed upon his mind, that long after, in a very advanced age, he was capable of recalling it to his remembrance, though consisting of so many detached passages, and reducing these to writing for the use of his sons, and posterity.

I shall have occasion, before I conclude this article, to explain in what manner declamation conducted to occasion the decay and corruption of the taste for true eloquence.

DIALOGUE UPON THE ORATORS, OR UPON THE CAUSES OF THE CORRUPTION OF ELOQUENCE.

THE author of this work is unknown. Some ascribe it to Tacitus, others to Quintilian, but without much foundation. What we may be assured of is, that it is a proof of his wit and capacity, whoever he was, and deserves a place among the best works after the Augustan age, from the purity and beauty of which it must however be allowed to be very remote. There are very fine passages in it. What he says by way of panegyric upon the profession of pleaders, seems to me of this kind. It is proper to remind the reader, that it is a heathen who speaks.

"The pleasure which arises from eloquence," says he, is not rapid and momentary; but the growth of every day, and almost every hour. And indeed, what can be more grateful to an ingenious mind, that has a taste for exalted satisfaction, than to see his house continually thronged by crowds of the most considerable persons in a city?—to be conscious that it is not to his riches, office, or authority, but to his person, that they come to pay this honour? The greatest wealth, the most splendid dignities, have they any thing so delightful and affecting, as the voluntary homage, which persons, equally to be respected for their birth and age, come to render to the merit and knowledge of an advocate, though often young, and sometimes destitute of the goods of fortune, in imploring the aid of his eloquence either for themselves or their friends, and confessing, in the midst of the affluence with which they are surrounded, that they are still in want of what is most valuable and excellent? What shall I say of the officious zeal of the citizens to attend him whenever he goes abroad, or returns to his house?—of the numerous audiences in which all eyes are fixed on him alone, whilst a profound silence reigns universally, with no other interruption but starts of admiration and applause?—in fine, of that absolute power which he has over men's minds, by inspiring them with such sentiments as he pleases? Nothing is more glorious and exalted than what I have now said. But there is still another pleasure more intense and affecting, known only to the orator himself. If he pronounces a discourse, that he has had time to study and polish at leisure, his joy as well as diction has something more solid, and more assured in it. If he has only some few moments' reflection allowed him to prepare himself for his cause, the very anxiety he feels upon that account, makes the success more grateful to him, and exalts the pleasure it gives him. But what still soothes him more agreeably, is the success of an unpremeditated discourse, ventured extemporaneously. For the productions of the mind are like those of the earth. The fruits, which cost no trouble, and grow spontaneously, are more grateful than those we are obliged to purchase with abundance of pains and cultivation."¹

¹ Ad voluptatem oratoris eloquentiæ transeo, cujus jucundius non uno aliove momento, sed omnibus prope diebus, et prope omnibus horis contingit. Quid enim dulcius libero et ingenio animo, et ad voluptates honestas nato, quam videre plenum semper et frequentem domum concursu splendidissimorum hominum? Illic scire non pecunie, non arbitrii, neque officii aliquas administrationi, sed sibi ipsi dari? Illic qui limo orbes, et locupletes, et potentes, venire plerumque ad juvenem et patrem, ut aut sua, aut amicorum discrimina commendent. Ulla, ne tante ingenium opum ac magnæ potentiæ voluptas, quam appetere homines veteres, et senes, et totius urbis gratia subitici, in summa rerum omnium abundantia contentes, id quod optimum sit se non habere? Jam vero qui togatorum comitatus et egræsus? quæ in publico species? quæ in judiciis veneratio? quod gaudium surgendi assistendiq; inter sapientes, in unum conversos? curre populum, et circumfundi eorum, et accipere affectum quemcumque orator induerit. Vulgata dicuntur gaudia, et imperiorum quoque oculis exposita percensio. Illa secretiora, et tantum ipsis orantibus nota, majora sunt. Sive accuratam meditatumque offert orationem est quoddam, sicut ipsius dictionis, ita gaudii pondus et constantia. Sive novam et recentem curam non sine aliqua trepidatione animi attulerit, ipsa sollicitudo commendat eventum, et lenocinator voluptati. Sed extemporalis audacia, atque ipsius temeritatis vel præcipua jucunditas est. Nam ingenio quoque, sicut in agro, quanquam alia diu se-

We cannot, in my opinion, deny that there are in this description a great many ingenious and solid thoughts, strong and emphatical expressions, and lively and eloquent turns. Perhaps there is too much wit and shining conceit in it: but that was the fault of the age.

I shall add here another very fine passage from the same author, in which he ascribes the principal causes of the corruption of eloquence to the bad education of children.

"Who does not know, that what has occasioned eloquence and the other arts to degenerate from their ancient perfection, is not the want of genius, but the indolence into which youth are fallen, the negligence of parents in the education of their children, the ignorance of the masters employed to instruct them, in fine, the oblivion and contempt of the taste of the ancients. These evils, which had their rise at Rome, have dispersed themselves from the city into the country of Italy, and infected all the provinces. Of old, in every house, it was the custom for a child born of an ingenious mother, not to be sent to the cottage of a nurse bought among slaves, but to be nurtured and educated in the bosom of her who bore him, whose merit and praise it was to take care of her house and children. Some female relation in years, and of known virtue and probity, was chosen to have the care of all the children of the family, in whose presence nothing contrary to decency and good manners was suffered to be spoken or done with impunity. She found the means to unite not only their studies and application, but even their play and recreations, with a certain air of modesty and reserve, that tempered their ardour and vivacity. It is thus we find that Cornelia the mother of the Gracchi, Aurelia of Cæsar, and Attia of Augustus, governed their children, and made them capable of appearing in the world with splendour. The view of this strict and manly education was to prepare the minds of children, by preserving them in all their natural purity and integrity, and preventing their being infected with any bad principle, to embrace the study of arts and science with ardour; and whether they chose the profession of arms, or applied themselves to the laws or eloquence, that they might addict themselves solely to their profession, and the attainment of a perfection in that alone.² But in these days no sooner is a child born, but he is given to some Greek slave, with a servant or two more to attend her, of the meanest and most useless sort in the family. At this tender age, susceptible of all impressions, he hears nothing but the frivolous, and often loose and abandoned stories of the lowest domestics. None of them have the least regard for what they say or do before their young master. And indeed, what attention of that kind can be expected from them, while the parents themselves accustom their children not to modesty and good manners, but to every kind of freedom and licentiousness: whence ensues by degrees an air of declared impudence, void of regard either for themselves or others! There are, besides this, certain vices peculiar to this city, which seem

rantur atque elaborantur, gratiora tamen quæ sua sponte nascuntur. Cap. 6.

² Quis ignorat et eloquentiam et ceteras artes decivisse non ista vetere gloria, non inopia hominum, sed decidia juventutis, et negligentia parentum, et inscientia præceptorum, et oblivione moris antiqui? quæ mala primùm in urbe nata, mox per Italiam fusa, jam in provincias manant.

Jam primùm suus cuique filius, ex casta parente natus, non in cella empæ nutritur, sed gremio at sinu matris educatur: cujus præcipua laus erit, tueri domum, et inservire liberis. Eligebatur autem aliqua major natu propinqua, cujus probatis spectatæque moribus omnis cujusquam familie soboles committeretur: eorum qua neque dicere fas erat quod turpe dictu, neque facere quod inonestum factu videretur. Ac non studia modo curasque, sed remissiones etiam lusaque puerorum, sanctitate quadam ac verecundia temperabat. Sic Corneliam Græchorum, si Aureliam Cæsaris, sic Attiam Augusti matrem præfuisse educationibus, ac produxisse principes, liberos accepimus. Quæ disciplina ac severitas ed pernebat, ut sincera et integra et nullis pravitatibus decorta adulescentisque natura, toto statim pectore arripere artes honestas: et, sive ad rem militarem, sive ad juris scientiam, sive ad eloquentiæ studium inclinasset, id solum ageret, id universum hauriret. Cap. 22.

most to have been conceived with them in their mothers' womb: such are the taste for theatrical shows, gladiators, and chariot-races. Are not these almost the only subjects of conversation among young people, and indeed all companies? Is it probable, that a mind intent upon, and in a manner besieged by these trifling amusements, should be very capable of applying to serious studies?"¹

These two passages suffice to give the reader some idea of this work, and to make him regret that it is not come down entire to us.

This dialogue may be divided into three parts. The first introduces an advocate and a poet contending upon the pre-eminence of their respective arts, and enlarging in praise of them, the one of eloquence, and the other of poetry. The second part is a speech of the same advocate, whom the author calls Afer, in favour of the orators of his times against the ancients. He lived in the reign of Vespasian, and was at the head of the bar. The third part of the work is an inquiry into the causes of the fall or corruption of eloquence. The speakers are Messala, Secundus, Maternus, and Afer. All that Secundus, and part of what Maternus, said, is lost, which makes a great chasm in the work, without mentioning several other defective passages.

QUINTILIAN:

(MARCUS FABIVS QVINTILIANVS.)

I SHALL reduce what I have to say upon Quintilian to three heads: First, I shall relate what is known of his history: Secondly, I shall speak of his work, and give the plan of it: And lastly, I shall explain the method of instructing youth and teaching rhetoric, as practised in his time.

I. What is known of Quintilian's History.

It appears that Quintilian was born in the second year of the emperor Claudius, which is the forty-second of Jesus Christ. This is according to Mr. Dodwell's conjecture, who is my guide in chronology as to what relates to the birth, life and employments of our rhetorician, and whose Annals upon Quintilian are arranged in a very clear and probable order.

The place of his birth is disputed. Many say that he was a native of Calagurris, a city of Spain, upon the Heber, now called *Calahorra*. Others believe, with sufficient foundation, that he was born at Rome. It is not certainly known whether he was the son or grandson of the orator Fabius, mentioned by Seneca the father, and placed by him in the number of those orators, whose reputation dies with them.²

Quintilian without doubt frequented the schools of the rhetoricians at Rome, in which youth were taught eloquence. He used another more effectual method for the attainment of it, which was to make himself the disciple of the orators of the greatest reputation. Domitius Afer held at that time the first rank among them. Quintilian did not content himself with hearing him plead at the bar; he often visited him; and that venerable old man, though the admiration of the age in which he lived, did not disdain to converse with a youth, in whom he observed great and very promising talents. This important service, those who are grown old with glory in this illustrious profession, have in their power to render their juniors, especially when they have quitted the bar for the

sake of retirement. Their houses may then become a kind of public school for the youth, who aspire at excelling in eloquence, and who may address themselves to them, to be informed by what means they may succeed.³ Quintilian knew how to improve Afer's good-will to his own advantage; and it appears, by the questions he proposed to him, that he had in view the forming of his taste and judgment by these conversations. He asked him one day which of the poets he thought came nearest Homer.⁴ "Virgil," says Afer, "is the second, but much nearer the first than the third."⁵ He had the grief to see this great man, who had so long done honour to the bar survive his own reputation, from not having known how to apply the wise advice of Horace,⁶ and from having chosen rather to sink under the weight of his function than retire, as he is reproached; *malles eum deficere, quàm desinere*. Domitius Afer died the 59th year of the Christian era, the same year in which Juvenal was born.

Two years after, Nero sent Galba governor into Hispania Tarraconensis, Ant. J. C. 61. It is believed that Quintilian followed him thither, and that after having taught rhetoric, and exercised the profession of an advocate during upwards of seven years, he returned to Rome with him.

It was about the end of this year that Galba was declared emperor, and Quintilian opened a school of rhetoric at Rome, Ant. J. C. 68. He was the first who taught it there by public authority, and with a salary from the state; for which he was indebted to Vespasian. For, according to Suetonius,⁷ that prince was the first that assigned the rhetoricians, both Greeks and Romans, pensions out of the public treasury, to the amount of twelve thousand five hundred livres.⁸ Before this establishment there were masters who taught it without being authorized by the public. Besides the pensions received by these rhetoricians from the state, the fathers⁹ paid a sum for the instruction of their children, which Juvenal thought very small in comparison with those they expended on trivial occasions. For, according to him, nothing cost a father less than his son, though he regretted every thing expended on his education: *Res nulla minoris Constat patri quam filius*. This sum amounted to two hundred and fifty livres: *Duo sestercia*. Quintilian was public professor of rhetoric twenty years with universal applause. He exercised at the same time, and with the same success, the function of an advocate, and acquired also great reputation at the bar. When the different parts of a cause were distributed to different pleaders, as was the custom of old, he was generally chosen to state or open the matter of it, which requires great method and perspicuity.¹⁰ He excelled also in the art of moving the passions; and he confesses¹¹ with that modest freedom natural to him, that he was often seen in pleading, not only to shed tears, but to change countenance, turn pale, and express all the signs of the most lively and sincere affliction.¹² He does not deny but it was to this talent that he owed

his reputation at the bar. And indeed it is chiefly by this character, that an orator distinguishes himself, and conciliates all the suffrages in his favour. We shall soon see how well qualified he was to instruct youth, and in what manner he acquired the love and esteem of every body on that account. Among the many illustrious disciples that frequented his school, Pliny the younger did him most honour, by the beauty of his genius, the elegance and solidity of his style, the admirable sweetness of his disposition, his liberality to men of learning, and his peculiar warmth of gratitude for his master, of which he afterwards gave him a most illustrious proof.

After having devoted twenty years entirely to the instruction of youth in the school, and the defence of clients at the bar, he obtained the emperor Domitian's permission to quit both these equally useful and laborious employments. Instructed by the sad example of his master Domitius Afer,¹ he believed it proper to think of a retreat, before it became absolutely necessary, and that he could not put a more graceful period to his labours, than by renouncing them at a time, when he should be regretted: *Honestissimum finem putabamus, desinere dum desideraremur*; whereas Domitian chose rather to sink under the weight of his profession, than to lay it down. It was upon this occasion that he gives wise advice to his brethren the pleaders. "The orator," says he, "would he take my opinion, would sound a retreat, before he fell into the snares of age, and gain the port, whilst his vessel was sound and in good condition."² Quintilian, however, at that time was only forty-six or forty-seven years old, a florid and robust time of life. Perhaps his long application had begun to impair his health. However that may be, his was not a leisure of indolence and sloth, but of activity and ardour, so that he became in some measure still more useful to the public than he had ever been by all his past labours. For indeed the latter were confined within the narrow bounds of a certain number of persons and years; whereas, the works, which were the fruit of his retirement, have instructed all ages; and we may say, that Quintilian's school has continued the school of mankind from his death, and still continues to abound with the admirable precepts he has left us upon eloquence.

He began by composing a treatise *Upon the Causes of the Corruption of Eloquence*, the loss of which can never be sufficiently regretted, Ant. J. C. 89. It undoubtedly is not the piece still extant under the title of *A Dialogue upon the Orators*. At the time when he began this work, he lost the youngest of his two sons, only five years of age: and some months after, a sudden death deprived him of his wife, who was only nineteen years old, and even somewhat less.³

Some time after, at the solicitation of his friends, he began his great work, the *Institutiones Oratorie*, consisting of twelve books, Ant. J. C. 90: of which I shall give an account in the sequel.

He had finished the three first books of it, when the emperor Domitian committed the two young princes, his great nephews, whom he designed for his successors, to his care, Ant. J. C. 91.⁴ They were the grandsons of his sister Domitilla, whose daughter, named also Domitilla, had married Flavius Clemens, the emperor's cousin-german, by whom she had these two princes. This was a new motive to him for redoubling his application to complete his work. His own words deserve repeating, the passage being remarkable. "Hitherto," says he, addressing himself to Victorinus, to whom he dedicates this piece, "I wrote only for you and myself; and, confining those instructions to our own houses, when the public did not think fit to approve them, I thought myself too happy that they might be useful to your son and mine; but since the emperor has vouchsafed to charge me with the education of his nephews, should I esteem as I ought the approbation of a god, and know the value

of the honour he has conferred upon me, if I did not measure the greatness of my undertaking by that idea. And, indeed, in whatever manner I considered it, whether in regard to manners or to knowledge and art, what ought I not to do, to deserve the esteem of so sacred a censor; a prince, in whose person supreme eloquence is united with supreme power? If then we are not surprised to see the most excellent poets, not only invoke the muses at the beginning of their works, but again implore their assistance, whenever in the course of it some new important object arises to be treated; with how much greater reason ought I to be pardoned, if what I did not at first I now do, and call all the gods to my aid, particularly him, under whose auspices I henceforth write, and who, more than all the rest, presides over study and science? May he then be propitious to me; and, proportioning his graces to the high idea he hath given of me, in a choice so glorious and so difficult to sustain, may he inspire my mind with the force and elevation it wants, and render me such as he hath believed me!"⁵

It must be confessed, that there is in this complimentary abundance of wit, loftiness, and grandeur, especially in the thought with which it concludes: "And render me such as he hath believed me." But is it possible to carry flattery and impiety to a greater height, than to treat a prince as a god, who was a monster of vice and cruelty? Nor am I even sure whether the last thought be so just as it is shining: "And render me such as he hath believed me." He was not such then in reality: and how came this pretended god to believe he was? Again, if instead of extolling the regularity and purity of his manners, he had contented himself with enlarging upon his eloquence and the other talents of the mind upon which he valued himself, the flattery had been less odious. He praises him in another place⁶ in the same manner, where he prefers him above all other poets; at which time it is very likely, that the consular ornaments were conferred upon Quintilian.

The care of the young princes' education with which Quintilian was charged, did not hinder him from working upon his book, the *Institutiones Oratorie*. His regard for his only surviving son, whose happy genius and disposition merited his whole tenderness and attention, was a powerful motive with him for hastening that work, which he considered as the most valuable part of the inheritance he should leave him; in order, says he himself, that if any unforeseen accident should deprive that dear child of his father, he might, even after his death, serve him as a guide and preceptor.⁷ Continually filled, therefore, with the thought and apprehension of his mortality, he laboured night and day upon his work; and had already finished the fifth book of it, when an early death robbed him of that darling child, in whom his whole joy and consolation were centred. This was to him, after the loss he had already sustained of his youngest son, a calamity that overwhelmed him with anguish and affliction. His grief, or rather despair, vented itself in complaints and reproaches against the gods themselves, whom he loudly accused of injustice and cruelty; declaring, that it was plain, after so cruel and

¹ Adhuc velat studia inter nos conferebamus; et, si parum nostra institutio probaretur à ceteris, contenti fore domestico usu videbamus, ut tui meique filii disciplinam formare, satis putaremus. Cum verò mihi Domitianus Augustus sororis meæ nepotum delegaverit curam, non satis honorem judiciorum celestium intelligam, nisi ex hoc quoque oneris, magnitudinem metiar. Quis enim mihi aut mores excolendi nisi modus, ut eos non immerito probaverit sanctissimus Censor? aut studia, ne felissimè in his videri Principem, ut in omnibus, ita in eloquentia quoque eminentissimum? Quod si nemo miratur poetas maxime sæpe ferisse, ut non solum initis operum suorum Musas invocarent, sed proventi quoque longius, cum ad aliquem gravium locum venissent, repeterent vota, et velut nova precatione uterentur: mihi quoque profectò poteri ignosci, si, quod initio, cum primum hanc materiam inchoavi, non fecerim, nunc omnes in auxilium deos, insuperque imprimis, quo neque præsentius aliud, neque studiis magis proprium nomen est, invoquem; ut, quantum nobis expectationis adjerit, tantum ingenti asprei, dexteraque ac volens adsit, et me, qualem esse credidit, faciat.

unjust a treatment, which neither himself nor his children had deserved, that there was no providence to superintend affairs below. Discourses of this kind show in a clear light, what even the most perfect probity of the Pagans was: for I do not know whether all antiquity can instance one man of a more humane, reasonable, wise, and virtuous character than Quintilian, according to the rule of paganism. His books abound with excellent maxims upon the education of children, upon the care which parents ought to take to preserve them from the dangers and corruption of the world, upon the attention masters ought to have that the precious deposit of innocence remain unblemished in them, upon the generous disinterestedness incumbent upon persons in power; and lastly, upon the zeal and love for justice and the public good.

His grief had been very just, if attended with moderation: for never child deserved more to be regretted than he. Besides the graces of nature and exterior attributes, a charming tone of voice, an amiable physiognomy, with a surprising facility in pronouncing the Greek and Roman languages, as if he had been born to excel equally in them both; he had the most happy disposition that could be desired for the sciences, united with a taste and inclination for study that astonished his teachers. But the qualities of his heart were still more extraordinary than those of his head. Quintilian, who had known abundance of youth, declares, with an oath, that he had never seen so much probity of inclination, goodness of soul, sweetness of temper, and elegance of mind, as in this dear child. In an illness of eight months' continuance he showed an evenness and constancy of mind, that his physicians could never sufficiently admire, opposing fears and pains with surprising fortitude, and, upon the point of expiring, consoling his father, and endeavouring to prevent his tears. What a misfortune was it that so many fine qualities were lost! But what a shame and reproach were it for Christian children to be less virtuous!

After having abandoned his studies for some time, Quintilian having recovered himself a little, resumed his work; for which he says, the public ought to have the more favourable opinion of him, as he laboured no longer for himself; his writings, as well as fortune, being to pass away to strangers. He at length finished his plan in twelve books, Ant. J. C. 93. It had cost him little more than two years: of which besides, he had employed a great part not in actually composing, but in preparing, and collecting all the matter of which it was to consist, by the perusal of authors who had treated the same subject.¹ And we have seen how many afflictions and melancholy affairs he had upon his hands during that time. It is astonishing and almost incredible, how so perfect a work could be composed in so short a space. His design was to follow the advice of Horace, who, in his Art of Poetry, recommends to authors not to be in too much haste to publish their writings.² Accordingly he kept his by him, in order to revise them at his leisure, to give time to the first emotions of self-love and the complacency people always have for their own productions to cool; and to examine them no longer with the fond prepossession of an author, but with the temper and impartiality of a reader. He could not long resist the eager desire of the public to have his works, and was in a manner reduced to abandon them to it, contenting himself with wishing them success, and recommending to his bookseller to take great care that they were exact and correct. It must have been at least a year before they could be in a condition to appear. We are obliged to the Abbé Gedeon for having enabled the public to judge of the merit of this author, by the translation he has published of his works.

Mr. Dodwell believes, it was about this time that Quintilian, being no longer employed in composing his great work, which he had lately finished, thought

of a second marriage,³ and accordingly espoused the grand-daughter of Tullius, as Pliny the younger calls him, Ant. J. C. 94. He had a daughter by her about the end of this year.

Domitian, notwithstanding his pretended divinity, was killed in his palace by Stephanus, who had put himself at the head of the conspirators, Ant. J. C. 96. That emperor had caused Flavius Clemens, then consul, to be put to death, and had banished his niece Flavia Domitilla, the wife of Clemens. He had also banished St. Flavia Domitilla, the daughter of one of the same consul's sisters. All these persons suffered for the faith in Jesus Christ. The death of Clemens hastened the death of Domitian, either through the horror and fear it gave every body, or because it animated Stephanus against him, who was the freedman and steward of Domitilla, the wife of Clemens, of whose estate he was obliged to give an account, and was accused of malversation in that respect, Ant. J. C. 98. Nerva succeeded Domitian, and reigned only sixteen months and some days. Trajan, whom he had adopted, was his successor, and reigned twenty years.

Nothing is known of Quintilian from the death of Domitian, except the marriage of his daughter, admitting he had one. When she was of age to marry he gave her to Nonius Celer. Pliny signalized himself on this occasion by a generosity and gratitude which in my opinion do him more honour than his writings, excellent as they are. He had studied eloquence under Quintilian. The works he has left us sufficiently prove that he was a disciple worthy of so great a master: but the following fact no less denotes the goodness of his heart, and the remembrance he constantly retained of the services he had received from him. As soon as he knew that Quintilian intended to marry his daughter, he thought it incumbent on him to express his gratitude to his master by a small present. The difficulty was to make him accept it. He wrote him a letter upon that head, that can never be sufficiently admired for its art and delicacy, of which I shall insert a translation in this place.

Pliny's Letter to Quintilian.

"Though the moderation of your mind is very great, and you have educated your daughter as becomes Quintilian's daughter, and the grand-daughter of Tullius: yet, as she is about to marry Nonius Celer, a person of distinction, whose employments in the state impose a kind of necessity upon him for appearing with splendour, it is proper, that she should adapt her dress and equipage to the rank of her husband. These exterior things indeed add nothing to our dignity; they however express and adorn it. I know how very rich you are in the goods of the mind, and that you are much less so in those of fortune than you ought to be. Let me claim therefore a part in your obligations, and, as another father, give our dear daughter fifty thousand sesterces, (12,500 livres⁴) to which I should add, if I was not assured, that the mediocrity of the present is the sole means to prevail upon your modesty to accept it. Adieu."⁵

This letter of Pliny's has one circumstance in it very much for Quintilian's honour: that after having publicly employed twenty years with surprising reputation and success, as well in instructing youth as pleading at the bar; after having long resided in

¹ This second marriage is not certain, but seems very probable.

² About 600*l.* sterling.

³ Quamvis et ipse sis continentissimus, et filiam tuam ita institueris, ut decebat filiam tuam, Tullii neptem: cum tamen sit nuptura honestissimo viro Nonio Celeri, cui ratio civium officiorum necessitatem quandam nitentis imponit; debet, secundum conditionem mariti, veste, comitatu augeri: quibus non quidem augeatur dignitas, ornatur tamen et instruitur. Te porro animo beatissimum, modicum facultatis scio. Itaque partem oneris tui mihi vendico, et, tanquam parens alter puellæ nostræ, confero quinquaginta millia nummum: plus collaturus, nisi à verecundia tua sola mediocritate minusculi impetrari posse confidere, ne recusares. — *Vale.* Ep. 32, l. 6.

¹ Epist. ad Tryph. libliop.

² Usus deinde Horatii consilio, qui in arte poetica suadet, ne precipitetur editio, nonnumquam prematur in amum; dabam illi otium, ut refrigerato inventionis amore, diligentius repetitos tanquam lectos perpendere.

the court with young princes, the education of whom ought to have given him, and undoubtedly did give him, great credit with the emperor, he had made no great fortune, and had always remained in a laudable mediocrity. A fine example, but unhappily very seldom imitated! Juvenal however intimates, that Quintilian was very rich, and that he had a considerable number of forests, from which, no doubt, arose a very great revenue.

Unde igitur tot
Quintilianus habet salus?
Sæc. vii. l. 3.

These riches must necessarily have been of later date than the time when Pliny made Quintilian the present we have mentioned, Ant. J. C. 118. It is believed, that if real, they were the effect of the liberality of Adrian, when he attained the empire, for he declared himself the protector of the learned, Quintilian was then seventy-six years old. It is not known whether he lived long after, and history tells us nothing of his death.

II. Plan and Character of Quintilian's Rhetoric.

The rhetoric of Quintilian, entitled, *Institutiones Oratorie*, is the most complete antiquity has left us. His design in it is to form the perfect orator. He begins with him in his cradle and from his birth, and goes on with him through all the stages of life to the grave. This rhetoric consists of twelve books. In the first he treats of the manner in which children should be educated from their earliest infancy; whence he proceeds to grammar. The second lays down rules to be observed in the schools of rhetoric, and solves several questions in regard to the art itself, as whether it be a science, whether useful, &c. The five following books contain the rules of invention and disposition. The eighth, ninth, and tenth books include all that relates to elocution. The eleventh, after a fine chapter upon the manner of speaking with propriety as an orator, *de aptè dicendo*, treats of memory and pronunciation. In the twelfth, which is perhaps the finest of them all, Quintilian lays down the personal qualities and obligations of an advocate, as such, and with regard to his clients; when he ought to quit his profession; and how employ his retirement.

One of the peculiar characters of Quintilian's rhetoric is, its being written with all the art, elegance, and energy of style it is possible to imagine. He knew, that precepts when treated in a naked, simple, and subtle manner, are only proper to dry up the sources of the mind, and, if I may use the expression, to make discourse lean and languid, by depriving it of all grace and beauty, and leaving it nothing but nerves and bones, more like a skeleton than a healthy and natural body.¹ He therefore endeavoured to introduce into his *Institutiones* all the ornament and elegance of which such a work was susceptible,² not, as he says himself, with the view of displaying his wit, (for he could have chosen a far more fruitful subject for that purpose) but that youth, from the attraction of pleasure, might apply themselves with more ardour to the reading and studying of his precepts, which without grace and ornament, could not fail, in offending the delicacy of their ears, to disgust also their minds. Accordingly we find in his writings a richness of thoughts, expressions, images, and special³ comparisons, which a lively imagination, adorned with a profound knowledge of nature, con-

tinually supplies, without ever exhausting itself, or falling into disagreeable repetitions: comparisons, which throw such a fullness of light and beauty into precepts, often obscure and disgusting in themselves, as give them a quite different spirit and effect.

The principal end of Quintilian, in his rhetoric, was to oppose the bad taste of eloquence, that prevailed in his time, and revive a manner of thinking and judging more sound and severe, and more conformable to the rules of the elegance of nature.⁴ Seneca had contributed more than any other author to vitiate and corrupt the judgment of the Roman youth, and to substitute in the place of that manly and solid eloquence, which had prevailed till his time, the prettinesses, if I may be allowed to call them so, of a style surfeited with ornaments, glittering thoughts, quaint conceits, antithesis, and point. He perceived aright, that his⁵ works would never please those who admired the ancients: for which reason he never ceased to speak ill of, and discredit them, even the authors who were most esteemed, as Cicero and Virgil. In consequence of this conduct an almost universal contempt for them ensued; so that when Quintilian began to teach, he found no author but Seneca in the hands of youth. He did not endeavour absolutely to exclude him; but could not suffer his being preferred to writers of incomparably greater merit.

For the rest, we ought not to be surprised that this bad taste made so rapid a progress in so short a time: which is indeed no more than what usually happens. There wants but a single person of a certain character to vitiate all the rest, and to corrupt the language of a whole nation. Such was Seneca.⁶ I omit speaking in this place of the other qualities, for which he was admired: a happy and universal genius; a vast extent of knowledge; a profound erudition in philosophy; and a morality abounding with the justest and most solid principles. To keep within the bounds of my subject, he had an easy and exuberant wit, a fine and rich imagination, a shining facility in his compositions, solid thoughts, expressions curious and full of energy, with happy and sprightly turns and conceits. But as to his style it was almost vicious in all its parts, and so much the more dangerous, as it was all over luxuriant with charming faults and beautiful defects.⁷

This florid style, this taste for point and quaintness, the more dangerous as the more easy and affecting, and therefore the more conformable to the character of youth, soon seized the whole city. It became necessary that every proof and every period should conclude with some glittering thought, or singular and surprising turn, to strike the ear, attract particular attention, and in some measure claim applause.⁸ Quintilian believed himself obliged to attack this bad taste with the utmost vigour; which he does almost throughout his whole work, by laying down, upon the model of the ancients, the principles of true and solid eloquence. It is not, as he often declares, and as his style sufficiently shows, because he was an enemy to the beauties and graces of discourse. He confesses that Cicero himself, to defend his clients, employed not only strong but shining arms; and that in the cause of Cornelius Balbus, in which he was often interrupted by the applauses and universal clapping of hands of his auditors, sublimity, pomp, and glitter of eloquence occasioned those loud acclama-

¹ Quod accidit mihi; dom corruptum et omnibus vitia fractum dicendi genus revocare ac severiora judicia contendere. *Quintil.* l. i. c. 1.

² Tum autem adus hui ferè in manibus adolescentium fuit. Quem non equidem omnino consular excutere, sed potioribus præferri non sinebam, quos ille non destitit inesse, cum diversi ubi consensu generis, placere se in dicendo posse illi, quibus illi placerent, timere. *Ibid.*

³ *Quintil.* l. x. c. 1.

⁴ Sed in eloquendo corrupta pleraque, atque eo periculisissima, quod abundant dulcibus vitiis. Velles cum suo ingenio disesse, alieno iudicio.

⁵ Nunc illud vult, ut omnis locus, omnis sensus in fine sermonis ferat aures. Turpe autem ac prope nefas dicunt, respirare ulli loco qui acclamationem non petierit. *Quintil.* l. viii. c. 5.

¹ Plerumque nodæ illæ artes, cuncta subtilitatis affectione frangunt atque conduunt. — id est in oratione generosius, et omnem succum ingenii habunt, et ossa detegunt: que ut esse et hauriri nervis esse debent, sic corpora opprimente eunt. *Quintil.* in *Proem.* l. i.

² In ceteris adulescere tentavimus aliquid nitoris, non jactandi ingenii gratiam (namque in id eligi materia poterat uberior) sed ut hoc ipso alacriterius magis juvenutem ad cognitionem eorum que necessaria studiis arbitrabamur, si ducti jucunditate aliqua lætioris, libentius decernerent ea, quorum se juvenis atque arida tradidit averteret animos, et aures (resertim tam delicatas) raderet, verebatur. *Quintil.* l. i. c. 1.

tions.¹ He adds to this motive a very true and judicious reflection, which seems to regard only the orator's reputation: this is, that the beauty of speech conduces very much to the success of a cause, because those who hear with pleasure are more attentive, and become more inclined to believe what they hear, won over as they are by the charms of discourse, and sometimes in a manner borne away by the general admiration. Quintilian therefore does not reject ornaments: but he insists that eloquence, which is an enemy to point, and all borrowed graces, admits no dress but what is manly, noble, and majestic.² He consents, that it should shine and be lovely, but from health, if I may be allowed the expression, and that it should owe its beauty solely to its natural vigour and florid complexion. He carries this principle so far as to say, that were he to choose, he should prefer the rough, gross force of the ancients, to the studied and effeminate affectation of the moderns.³ But, says he, there is in this point a certain mean that may be observed, in like manner as there is a neatness and elegance at present in our tables and furniture, which is so far from being reprovable, that we ought, to the utmost of our power, to make it become a virtue in the general acceptance.

We find by the little I have related of Quintilian, how greatly useful the study of such a work may be to form the judgment of youth. It is no less so in respect to the manners. He has scattered admirable maxims of that nature throughout his rhetoric. I have quoted part of them in my treatise upon study.

But this fund of probity, so worthy in itself of our highest praises, is much dishonoured by our rhetorician's impious flatteries in regard to Domitian, and by his despair on the death of his children, that rose so high as to deny providence. This example, and many others of a like nature, instruct us how to think of these pagan virtues, which were solely founded in self-love, and of a religion that afforded no resource against the losses and evils to which human life is continually exposed.

III. Method of Instructing Youth in Quintilian's Time.

Before I conclude this article upon Quintilian, I shall extract from his writings part of what relates to the manner of teaching, as used at Rome, in his time.

It appears to have been a very usual custom at Rome, not to begin the instruction of children till they were seven years old, because it was believed, that before that age they had neither sufficient strength of body nor extent of mind for learning.⁴ Quintilian thinks otherwise, and prefers the opinion of Chrysippus, who had composed a treatise of considerable extent, and in great esteem, upon the education of children. Though that philosopher allowed three years to the nurses, he was from that age for having them industriously imbued with good principles of morality, and formed insensibly for virtue. Now, says Quintilian, if from that early state their manners may be cultivated, what hinders but their minds may also be improved? What is a child to do from the time he begins to speak? For undoubtedly he must do something. Is it proper to abandon him

entirely to the discourses of women and *quæstionibus*? At that age we know he is incapable either of pains or application. Therefore this must not be so much a study as a play, whereby these first years of infancy, till the seventh, which are generally lost, may be usefully applied in teaching him a thousand agreeable things within the reach of his capacity.

They began with the study of the Greek language:⁵ but that of the Latin soon followed; from which time they cultivated both languages with equal application. This is not practised with sufficient regularity among the French, [*or indeed the English,*] who seldom or never know their native tongue by principles.

When the children had learnt to read well, and to write correctly, they were taught both the Latin and Greek grammars. They had, for this end, private masters who instructed them at home, and others who taught in the public schools. Quintilian examines which of these two methods of teaching is the most useful; and, after having attentively considered the reasons on both sides, he declares for the public schools. The chapter wherein he treats this question, is one of the finest parts of his work.

Grammar was not considered in those times as a frivolous employment of little importance.⁶ The Romans set a higher value upon it, and applied themselves to it in a particular manner; convinced, that to propose making a progress in the sciences without the assistance of grammar, is like intending to erect a building without a foundation. They did not dwell upon minute things and subtleties, which serve only to cramp the genius, and make the mind dry and frigid; they studied its principles, and examined its reasons, with care; for there is nothing hurtful in grammar, but what is useless.

Grammar, that is to say, the art of writing and speaking correctly, turns upon four principles:⁷ reason, antiquity, authority, and use. Quintilian says an admirable thing upon this last head. This word *Use*,⁸ according to him, requires an explanation, and it is necessary to define precisely what we understand by it. For, if we take it for what we see done by the generality of people, the consequences would be dangerous, not only in regard to language, but what is more important, in respect to manners. For, says he, can it be expected among men to see the generality follow or use what is best, and according to rule? He repeats several customs very common in his time, which ought not to be considered as uses but as abuses, though generally practised by the whole city. We shall call use therefore, as it relates to language, that which is received by the consent of such as speak best; as, in regard to manners, that is use, which has the approbation of the good and worthy.

The care of teaching children to read and write correctly, and of learning them the principles of the Greek and Latin tongues, was the first but not the chief duty of grammarians.⁹ They added to this the reading and explication of the poets, which was of exceeding great extent, and required profound erudition. They did not content themselves with making children observe the propriety and natural signification of words; the different feet in the construction of verses; the turns and expressions peculiar to poetry, with the tropes and figures. They applied themselves principally in showing¹⁰ what it was necessary

¹ Nec fortibus modo sed etiam fulgentibus armis præliatus in causa est Cicero Corneli: qui non assecutus esset docendo Judicem tantum, et utiliter demum se Latine perspicuè que dicendo, ut populus Romanus admirationem suam; non acclamationem tantum, sed etiam plausum confiteretur. Sublimitas profectus, et magnificentia, et nitor, et auctoritas expressit illum fragorem.—Sed ne causæ quidem parum conforti hic orationis ornatu. Nam qui libenter audiunt, et magis attendunt, et in great esteem, plerumque ipsa delectatione capiunt, nonnunquam ipsa admiratione auferuntur. *Quintil.* l. viii. c. 3.

² Sed hic ornatu, (repetat enim) virilis, fortis, et sanctus ait: nec effeminatam levitatem, nec fævo emolentem colorem amo: sanguine et viribus nitet. *Quintil.* *ibid.*

³ Et, si necesse sit, veterem illum horrorem dicendi malim, quam istam novam lieentiam. Sed patet media quedam via: sicut in cultu vitæque accessit aliisq; citra reprehensionem nitor, quem, sicut possumus, adiciamus virtutibus. *Ibid.* c. 5.

⁴ *Quintil.* l. i. c. 1.

⁵ *Quinc.* l. i. c. 1.

⁶ *L. i. c. 4.*

⁷ *Ibid.*

⁸ Sed hinc ipsi necessarium est iudicium, constituendum que imprimis id ipsum quid sit, quod consuetudinem vocamus. Quæ si ex eo quod plures faciunt nomen accipiat, periculosissimum dabit præceptum, non orationi modo, sed (quod majus est) vitæ. Unde enim tantum boni ut pluribus que recta sunt placeant? Igitur ut velli, et comam in gradus frangere, et in balneis perperare, quantibet hæc invaserit civitatem, non erit consuetudo, quia nihil horum caret reprehensione.—sic, in loquendo, non, si quid vitiosè multa iusserit, pro regula sermonis accipiendum erit.—Ergo consuetudinem sermonis, vocabo consensum eruditiorum; sicut vivendi, consensum bonorum. *Lib. i. cap. 4.*

⁹ *L. i. c. 5.*

¹⁰ Præcipuè vero illa infigit animis, quæ in œconomia virtutis, quæ in decore rerum; quid personæ cuique convenit; quid in senibus laudandum, quid in verbis; ubi cupia probabitur, ubi modus.

to remark in the economy or conduct of a piece, and the consistency of its parts and character; what was fine in the thoughts and diction; and wherefore the style was sometimes flowing and luxuriant, and sometimes succinct and concise. They made children also perfectly acquainted with whatever had any relation, in the poets, either to fable or history, without however charging their memories with any thing useless. At least, these are the rules prescribed by Quintilian. He reckons it a perfection in a grammarian, to be ignorant of certain things, which indeed do not deserve to be known.¹

The grammarians began also to form youth for composition, by making them write descriptions, fables, and more extensive narrations.² They sometimes made excursions, of which Quintilian complains, into the province of rhetoric, and made their disciples compose discourses, not only in the demonstrative kind, which seemed abandoned to them, but even in the deliberative.³ At the same time that youth learnt grammar, they were also taught music, geometry, the manner of dancing that improves the person and mien, and the art of pronunciation, or of speaking in public; all which were considered as essential to the future orator, and always preceded the study of rhetoric.⁴

The age for entering upon this study was not and could not be fixed, because it depended on the progress made in the previous studies. What we certainly know of it, is, that young persons devoted several years to it: *Adulti ferè pueri ad hos præceptores transferuntur, et apud eos juvenes etiam facti perseverant.*⁵ We may conjecture, that they generally began rhetoric at thirteen or fourteen years of age, and continued at it till seventeen or eighteen. The length of time employed in this study ought not to surprise us, because at Rome as well as Athens, eloquence opening the door to the highest dignities of the republic, this art was the principal employment of the youth of both cities. We must not forget, that at Rome they studied rhetoric under both Greek and Latin masters.

The function of a rhetorician included two parts: precepts and declamations.

Quintilian, in several passages of his work, proves the utility and necessity of precepts: but he is far from believing, that a scrupulous observance of them is indispensably necessary in composing. Rhetoric would certainly be very easy and attainable, if it could be made to consist in a small number of fixed and certain rules; but its rules change according to time, occasion, and necessity. For which reason the principal requisite in an orator is judgment, because he is to determine differently his own conduct, according to the exigency of affairs.⁶

The rhetorician dictated the precepts to his disciples, which must have taken up abundance of time: for the rhetorics were generally very long, as we may conclude from that of Quintilian. It often treated subjects of a very abstract, and very improper nature in my opinion, to inspire a taste for eloquence. These are that kind of passages, which, in regard to youth, I have taken the liberty to retrench in my edition of this rhetorician. He found this custom established, and could not with prudence depart from it. But he makes his readers good amends, not only by the graces and beauties of style diffused through all the passages susceptible of them, but still more by the solid reflections, with which he unites most of his precepts. And, when he explained them to his disciples, what force and clearness must his pronunciation have added to them!

To teach youth how to practise the precepts he had explained to them, the master formed them for composition.⁷ At first they made historical narrations. They then rose to praising of great men, and

blaming such as had rendered themselves odious by their criminal actions; and sometimes made parallels and comparisons between them. They exercised themselves also in commonplaces, upon avarice, ingratitude, and the other vices in general: and in certain themes which supplied abundant matter for eloquence; for instance, whether the country life is preferable to that of the town; whether most glory be acquired in the field or at the bar. Care was also taken to exercise the memory.⁸ Quintilian for this end is for having youth learn by heart select passages out of the orators, historians, and other celebrated authors: the poets were left wholly to the grammarians. They will form their taste early by this means, says he, their memory will constantly supply them with excellent models, which they will imitate even without thinking of it: expressions, turns of thoughts and figures, will rise up with no constraint under their pens, and present themselves as treasures carefully reserved against occasion.⁹

By these different exercises, they were insensibly led on to the composition of discourses in form, called declamations, in which the principal business of rhetoric consisted.¹⁰ These were harangues composed upon feigned and imaginary subjects, in imitation of those at the bar, and in the public deliberations. Demetrius Phalereus was the first who introduced the use of them among the Greeks.

Declamations were instituted to prepare youth for the real affairs of the bar, of which they were properly to be a faithful resemblance; and as long as they kept within these just bounds, and perfectly imitated the form and style of actual pleadings, they were of great use. Accordingly this sort of composition comprised all the parts and beauties of a coherent discourse. But this exercise, so useful in itself, degenerated so much through the ignorance and bad taste of masters, that declamations were one of the principal causes of the ruin of eloquence. They made choice of fabulous subjects, entirely extraordinary and unnatural, which had no manner of relation to the matters treated at the bar. I shall cite a single example of this kind, from which the rest may be known.¹¹ There was a law which decreed, that the hands of him who struck or used violence to his father should be cut off. *Qui patrem pulsaverit, manus ei præcidantur.* A tyrant, having caused a father and his two sons to be brought to him in the citadel, ordered the sons to beat the father. One of them, to avoid so horrid an impiety, threw himself headlong from the works of the citadel: the other, compelled by necessity, obeyed the command, and struck his father; he afterwards killed the tyrant, who had made him his friend, and received the reward granted him by the laws in such a case. He was however tried by the judges for having used violence to his father, and the prosecutor demanded that his hands should be cut off. The father takes upon him his defence. Matters of a much more extravagant nature were treated in declamations. The style was suited to the choice of the subjects, and consisted of nothing but stiff, far-fetched expressions, glittering conceits, points, antitheses, quibbles, and jingle, strained figures, frothy bombast,¹² in a word, of all manner of puerile ornaments, crowded together without judgment or choice.

Quintilian opposed this bad taste with the utmost zeal, and applied himself to reforming declamations,

¹ Lib. ii. c. 8.

² Sic assuescent optimis, semperque habebunt intra se quod imitentur: etiam non sentientes, sorman illam, quam mente penitus acceperint, experient. Abundantia autem copiarum verborum optimorum, et compositione, ac figuris jam non quaeritis, sed sponte et ex reposito velut thesaurus se offerentibus.

³ Lib. ii. c. 4.

⁴ Senec. Declam. iv. l. 9.

⁵ Hæc tolerabilia essent, et ad eloquentiam iterum viam facerent: nunc et rerum tumore, et sententiarum vanissimum strepitum, hoc tantum proficiunt, ut, cum in forum venerint, putent se in alium terrarum orbem delatos. Et ideo ego adolescentulos existimo in scholis stultissimos fieri, quia nihil exiit, quæ in usu habemus, aut audiunt, aut vident: sed mellitus verborum globulos, et omnia dicta factaque quasi papavere et sesamo sparsa. Petron. in init.

⁶ Ex quo mihi inter virtutes Grammatici habebitur, aliqua docere.

⁷ L. i. c. 6.

⁸ L. ii. c. 1.

⁹ L. i. c. 7, &c.

¹⁰ L. ii. c. 2.

¹¹ Atque adeo res in oratore præcipue consilium, quia variè et ed rerum momenta convertitur. Lib. ii. c. 14.

¹² Lib. ii. c. 4.

by reducing them to their original design, and making them conformable to the practice of the bar. Believing it improper, however, to oppose the torrent of custom in a direct manner, he averted of his ardour in some respects, and gave way to the stream in a certain degree. It will not be disagreeable to see in what manner he justifies this condescension himself. "What then, some one may say, are youth never to be suffered to treat extraordinary subjects? To give alouse to their genius, to abandon themselves to the sallies of a warm imagination, and swell a little in their style and eloquence? That is undoubtedly right," says Quintilian. "But then let them keep at least to what is justly bold and swelling; and not give into what is ridiculous and extravagant to all who have any sense or discernment. In fine, if we must have this indulgence for declaimers, let them swell as much as they please, provided they remember, that as certain animals are turned loose into the fields upon the luxuriant herbage for a certain time, and afterwards are let blood, and return to their usual meat for the preservation of their vigour; so they ought to distrust their fullness, and retrench its vicious superfluities, if they would have their productions really sound and vigorous. Otherwise, on their first attempts in public, they will find that imaginary fullness and abundance no more than empty swell and tumour."¹

With such wise precautions, declamations might be of great use to young persons. Perfect discourses are not to be required or expected from them at first.² A fruitful and abundant genius may be known from a boldness and spirit in attempting, though not always within the bounds of the just and the true. It is good to have always something to retrench at these years. When a young person had worked in private upon a subject given him to treat, he brought his composition to the school, and read it before his companions. The master sometimes, to render them more attentive, and to form their judgment, asked them what they thought worthy of either praise or blame in the piece read to them. He afterwards determined the manner in which they were to judge of it, as well in regard to the thoughts, as the expression: he pointed out the passages that were either to be made more clear, or to be enlarged or abridged; always softening his criticism with an air of kindness, and sometimes even with praise, in order to its being the better received. "For my part," says Quintilian, "when I observed young persons either too wanton and luxuriant in their style, or more bold than solid in their thoughts, I told them, for the present I would suffer it, but the time would come when I should not permit the taking of such liberties. And thus they were pleased with their wit, without being deceived on the side of their judgment."³

When the youth, upon the advice of his master, had carefully retouched his piece, he prepared to pronounce it in public; and this was one of the greatest advantages derived from the study of rhetoric, and at the same time one of the most laborious exercises for the master, as the satirist observes:

Declamare doces, oh ferrea pectora, Vecti!

Juv. Sat. 7.

With iron lungs who teaches to declaim.

¹ Quid ergo? Nunquam hec supra fidem, et poetica (ut verè dicam) themata juvenibus petrare permittimus, ut expatiatur, et gaudeant materia, et quasi in corpus eant? Erat optimum. Sed certè sint grandia et tumida, non stultitia, et acerbioribus oculis intuenti ridebunt. Ac, si jam cendum est, implent se declamator aliquando, dum sciunt, ut quadrupes, cum veridi pabulo distente sunt, sanguinis distractione curantur, et sic ad cibos veribus conservandis idoneos redeunt: ita sibi quousque tenuandos adipos, et quicquid humoris corrupti contraxerit, emittendum, si esse sanus ac robustus volet. Alioqui, tumor ille innis primo cuiusque veri operis comitu deprehenditur. Lib. ii. c. 11.

² In pueris oratio perfecta nec exiri, nec sperari potest: melior autem est indolens læta, generosique conatus, et vel plura iusto concipiens interim spiritus. Nec unquam me in his discitis annis offendet, si quid superflui. Lib. ii. c. 4.

³ Sublimi ego dicere pueris aliquid ausis licentius non lictum, laudare illud me adhuc; venturum tempus, quo idem non permitterem. Ita, et ingenio gaudebant, et iudicio non fallabantur. Ibid.

The relations and friends of the speakers assembled on these occasions, and it was the height of joy to fathers to see their sons succeed in these declamations which prepared them for pleading, and enabled them to distinguish themselves in time at the bar.

Among the different exercises of rhetoric, there is reason to be surprised, that nothing is said of the reading and explaining of good authors, which alone is capable of forming entirely the taste of youth, and of teaching them to compose well. Quintilian⁴ confesses, that this was not practised at the time he began to teach rhetoric. He was sensible of all its advantages from the first, and exercised some young persons in it, whom he instructed in private, in consequence of their parents' request: but having found the contrary custom established in the schools, he was afraid to depart from the ancient method; so much force and dominion has custom over the mind of man! Convinced of the vast importance of this practice with regard to youth, he recommends it industriously in his oratorical institutions: and as the grammarian's business was to explain the poets to them, he is for having the rhetorician do the same in respect to the orators and historians, but especially the former, in reading them with the pupils, and making them sensible of all their beauties; and he prefers this exercise far before all the precepts of rhetoric, how excellent soever they may be; examples being infinitely more improving in his opinion.⁵ For, says he, what the rhetorician contents himself with teaching, the orator sets before the eyes. The one points out the road youth are to take the other in a manner leads them by the hand all the way. *Que doctor præcipit, orator ostendit.*⁶

I have perhaps enlarged a little too much upon what relates to this excellent master of rhetoric, from whom I have cited many passages, for which I ought to make some excuse to the reader. I desire him therefore to pardon my too manifest prejudice and passion for Quintilian, who is my favourite author, and whose writings have been the subjects of my lessons in the royal college more than forty years. I confess, that I am charmed and transported whenever I read his books, which always seem new to me; and I set the higher value upon them, as I know no author more capable of preserving youth against the false taste of eloquence, which seems in our days to aspire at superiority and dominion.

Several Saints have taught rhetoric, and have done honour to their profession by their profound knowledge, and still more by their solid piety: St. Cyprian St. Gregory Nazianzen, St. Augustin, &c. The last mentions⁷ a celebrated rhetorician, named Victorinus, to whom a statue was erected at Rome, where the learned instruction he had given the children of the most illustrious senators had acquired him great reputation. The affecting history of his conversion, (for he had courageously renounced paganism for the Christian religion) contributed very much to that of St. Augustin.

CHAPTER V.

OF SOPHISTS.

In the subject I am now to treat, I have made great use of Mr. Hardion's work upon the *Origin and Progress of Rhetoric amongst the Greeks*, of which only a small part has been published.

It is hard to give a just idea and exact definition of sophists, because their condition and reputation have undergone various changes. It was at first a very honourable title. It afterwards became odious and contemptible from the vices of the sophists, and the abuse they made of their talents. At length the same title, in a manner restored to its privileges by the merit of those who bore it, continued in honour for a considerable succession of ages, which did not however prevent many of them, even in those times, from making an ill use of it.

⁴ L. ii. c. 5.

⁵ Hoc diligenter genus ausim dicere plus collaturum discentibus, quam omnes omnium artes. Num in omnibus ferè minus valent præcepta, quam exempla. Lib. ii. cap. 5.

⁶ L. x. c. 1.

⁷ Confess. l. viii. c. 2.

The name of sophist among the ancients was of very great extent, and was given to all those whose minds were adorned with useful and polite learning, and who imparted their knowledge to others, either by speech or in writing, upon any science or subject whatsoever. Hence we may judge how honourable this character was at first, and what respect it must have drawn upon those, who, distinguishing themselves by a superior merit, made it their business to form mankind for virtue, science, and the government of states. The greatest proof which can be given, says Isocrates, of the singular estimation in which the sophists were held, is, that Solon, who was the first Athenian called sophist, was judged worthy by our ancestors of being placed at the head of the republic. Herodotus reckons him amongst the sophists, whom the opulence of Cæsus, and his love for the polite arts, had brought to his court.

When by the defeat of Cæsus, Asia Minor was subjected to the arms of the Persians, most of the sophists returned into Greece, and the city of Athens became, under the government of Pisistratus and his children, the darling asylum and residence of the learned.

To understand aright the advantages they were of to Greece, we have only to remember the important services they rendered Pericles in regard to policy and government.

All arts, whose objects are great and considerable, require a genius for discussion, and a profound knowledge of nature.¹ The mind is thereby accustomed to conceive lofty and sublime thoughts, and enabled to attain its perfection. Pericles united with the most happy natural talents this habit of meditating and discussing. Having fallen into the hands of Anaxagoras, who followed this method in every thing, he learned from him to trace things to their principles, and applied himself particularly to the study of nature.² History tells us the use he made of it on the occasion of an eclipse of the sun, which had thrown his whole fleet into a consternation. Anaxagoras, who abounded in this kind of knowledge, made it the principal subject of his conversations with Pericles, who knew how to select from them what was proper, to apply it to rhetoric.

Damon, who succeeded Anaxagoras with Pericles, called himself only a musician, but concealed profound learning under that name and profession.³ Pericles passed whole days with him, either to improve the knowledge he already had, or to acquire more.⁴ Damon was the most amiable man in the world, and never wanted abundant resources upon whatever subject he was consulted. He had studied nature profoundly, and the effects of the different kinds of music. He composed excellently himself, and all his works tended to inspire horror of vice and love of virtue. Whatever care this sophist had taken to conceal his real profession, his enemies, or rather those of Pericles, perceived at length that his lyre was only assumed to disguise him from their sight. From that time they used all means to discredit him with the people. They painted him as an ambitious, turbulent person, who favoured tyranny. The comic poets seconded them to the utmost of their power, by the ridicule they vented against him. He was at length cited to answer for himself before the judges, and banished by the ostracism. His merit and attachment to Pericles were his only crimes.

That illustrious Athenian had also another teacher both in eloquence and policy, whose name and profession must give surprise: this was the famous Aspasia of Miletus.⁵ That woman, so much celebrated for her beauty, knowledge, and eloquence, was at the same time of two very different professions, a courtesan and a sophist. Her house was frequented by the gravest personages of Athens. She gave her lessons of eloquence and policy with so much politeness and modesty, that the husbands were not afraid to carry their

wives thither, where they might be present without shame or danger.

In her conduct and studies she followed the example of another famous courtesan of Miletus, named Thargelia, whose talents had acquired her the title of sophist, and whose exceeding beauty had raised her to the height of grandeur. When Xerxes meditated the conquest of Greece, he engaged her to employ the charms of her person and wit, to bring over several of the Grecian cities to his side, in which she succeeded effectually. She at length settled in Thessaly, where the sovereign married her, and she lived thirty years upon the throne.

Aspasia with abundance of wit and beauty united a profound knowledge of rhetoric and policy. Socrates boasted, that it was to her instructions he was indebted for all his eloquence, and ascribed to her the merit of having formed all the great orators of his time.⁶ He intimates also in Plato, that Aspasia had the greatest share in composing the funeral oration, pronounced by Pericles in praise of the Athenians, who fell in battle for their country, which appeared so admirable, that when he had done speaking, the mothers and wives of those he had praised, ran to embrace and crown him with wreaths and fillets, as a champion victorious in the games.

Pericles was in no good understanding with his wife, who consented without any difficulty to be divorced from him. After he had married her to another, he took Aspasia in her stead, and lived with her in the most perfect union. She was a long time the mark of the poets' satiric wit, who in their comedies drew her sometimes under the name of Omphale, sometimes of Dejanira, and sometimes under that of Juno. It is not certain whether it was before or after her marriage that she was accused before the judges for the crime of impiety.⁷ It is only said, that Pericles saved her with great difficulty, and that he exerted all his credit and eloquence in her defence. It is a pity that Aspasia dishonoured by the irregularity of her manners, and her profession of a courtesan, the many fine qualities, for which she was otherwise so estimable, and which without that blot, would have made her an honour to her sex. But they prove, however, of what the sex is capable, and how high females can carry the talents of the mind, and even the science of government.

Besides Anaxagoras, Damon, and Aspasia, who had principally instructed Pericles in eloquence and policy, he had also several other sophists of great reputation in his house. This conduct shows the value, which the great men of antiquity set upon, and the use they made of, the sciences, which they were very far from considering as a simple amusement, fit only at most to gratify the curiosity of a speculative mind with rare and abstract knowledge, but incapable of forming persons for the government of states.

The extraordinary honour paid by all Greece to the sophists, proves how highly they were esteemed. When they arrived at a city, they were met by the people in a body, and their entrance into it had something of the air of a triumph.⁸ They had their freedom conferred upon them, were granted all sorts of immunities, and had statues erected to their honour. Rome erected one to the sophist Protagoras, who went thither by order of the emperor Constantius.⁹ Nothing can be imagined more glorious or more soothing than the inscription of this statue: *Regina rerum Roma Regi eloquentiæ*; that is, "Rome, the queen of the world, to the king of eloquence."

The experience which most of the cities had made of the advantage of the sophists to those in the administration of public affairs, and especially in the instruction of youth, occasioned their being treated with all these singular marks of esteem and distinction. Besides which, it cannot be denied, that many of them had abundance of wit, had acquired a great extent of knowledge by application, and distinguished themselves in a particular manner by their eloquence. The

most celebrated were Gorgias, Tisias, Protagoras, and Prodicus, who all appeared in the time of Socrates.

GORGIAS is surnamed the *Leontine*, because he was a native of Leontium, a city of Sicily. His citizens, who were at war with those of Syracuse, deputed him as the most excellent orator among them, to implore aid of the Athenians, whom he charmed by his eloquence, and obtained from them all he demanded. As it was new to them, they were dazzled with the pomp of his words, thoughts, genius, and figures; and with those artfully laboured, and in a manner wire-drawn periods, the members of which, by a studied disparity and resemblance, answer each other with a nice exactness, and form a regular and harmonious cadence, that agreeably soothes the ear.¹ This kind of *prettiness*, for it cannot well be called by any other name, is pardonable when not too frequent, and is even graceful when used with the sober temper with which Cicero employed it. But Gorgias abandoned himself to it without any reserve. Every thing glittered in his style, in which art seemed to pride itself in appearing every where without a veil. He went to display it upon a much larger theatre, namely, in the Olympic games, and afterwards in the Pythian; where he was equally admired by all Greece. They loaded him universally with honour, which they carried so far, as to erect him a statue of gold at Delphos, an honour never before conferred on any man.² Gorgias was the first who ventured to boast in a numerous assembly, that he was ready to dispute upon any subject that should be proposed: which became very common afterwards.³ Crassus had reason to treat so senseless a vanity, or rather, as he calls it himself, so ridiculous an impudence with derision. He lived to an hundred and seven years old, without ever quitting his studies;⁴ and upon being asked how he could support so long a life, he replied, that age had never given him any reason to complain. Isocrates, of all his disciples, was the most illustrious, and did him the greatest honour.

TISIAS was a native of the same city as Gorgias, and according to some, was joined with him in the deputation to the Athenians.⁵ He also acquired great estimation. Lysias, a famous orator, of whom I shall speak in the sequel, was one of his disciples.

PROTAGORAS, of Abdera in Thrace, was contemporary with Gorgias, and perhaps even a little prior to him.⁶ He was also of the same taste, and had, like him, a very great reputation for eloquence. He taught it during forty years, and gained by his profession more considerable sums than Phidias, or ten as excellent statues as him, could ever have been able to have acquired. So Socrates says in Plato.

Aulus Gellius⁷ relates a very singular lawsuit between this Protagoras and one of his disciples. The latter, whose name was Evalthus, passionately desirous of making himself a celebrated advocate, applies to Protagoras. The price was agreed on; for these masters always began with that; and the rhetorician engaged to instruct Evalthus in the most secret mysteries of eloquence. The disciple, on his side, pays down directly half the sum agreed on, and according to articles, defers the payment of the other half, till after the carrying of the first cause he should plead. Protagoras, without loss of time, displays all his precepts, and after a great number of lessons, pretends that he had made his scholar capable of shining at the bar, and presses him to make an essay of his ability. Evalthus, whether out of timidity or some other reason, always defers it, and obstinately declines exercising his new talent. The rhetorician, weary of his continued refusal, has recourse to the judges. Then, sure of the victory, whatever sen-

tence they might pass, he insults the young man. For, says he, if the decree be in my favour, it will oblige you to pay me: if against me, you carry your first cause, and are my debtor according to our agreement. He believed the argument unanswerable. Evalthus was in no concern, and replied immediately, I accept the alternative. If judgment goes for me, you lose your cause: if for you, I am discharged by our articles; I lose my first cause, and from that moment the obligation ceases. The judges were posed by this captious alternative, and left the case undecided: in all probability Protagoras repented his having instructed his disciple so well.

PRODICUS of the isle of Cea, one of the Cyclades, the contemporary with Democritus and Gorgias, and disciple of Protagoras, was one of the most celebrated sophists of Greece.⁸ He flourished in the 88th Olympiad, and among others had Euripides, Socrates, Theramenes, and Isocrates, for his disciples. He did not disdain to teach in private at Athens, though he was there in the character of ambassador from his country, which had already conferred several other public employments upon him: and though the great approbation which his harangue had obtained him from the Athenians upon the day of his public audience, seemed to oppose his descending to use his talent upon less occasions. Plato insinuates that the desire of gain induced Prodicus to keep a school. He accordingly enriched himself considerably by that business. He went from city to city to display his eloquence, and though he did it in a mercenary manner, he however received great honour at Thebes, and still greater at Lacedæmon.

His declamation of *fifty drachmas* is very much spoken of, which was so called, as some of the learned tell us, from each auditor being obliged to pay him that sum, amounting to about twenty-five livres French.⁹ This was paying very dear for hearing at harangue. Others understand it of a lecture, and not an harangue. Socrates, in one of Plato's dialogues, complains with his air of ridicule, of not being able to discourse well upon the nature of nouns, because he had not heard the lesson of fifty drachmas,¹⁰ which according to Prodicus, revealed the whole mystery.¹¹ And indeed this sophist had discourses of 12 prices, from two oboli to fifty drachmas.¹² Could any thing be more sordid?

The fable of Prodicus, wherein he supposes that virtue and pleasure, in the form of women, present themselves to Hercules, and endeavour, in emulation of each other, to allure him, has been justly extolled by many authors. Xenophon¹³ has explained it with great extent and beauty; yet he says, that it was much longer and more adorned in the piece of Prodicus upon Hercules. Lucian has imitated it ingeniously.

The Athenians put our sophist to death, as a corrupter of youth.¹⁴ It is probable that he was accused of teaching his disciples irreligion.

These sophists did not support their reputation long. I have shown, in the life of Socrates, in what manner that great man, who believed it incumbent on him as a good citizen to undeceive the public in regard to them, succeeded in making them known for what they were, by taking off the mask from their faults. He interrogated them in public conversations, with an air of simplicity and almost ignorance which concealed infinite art, as one who desired to be instructed and improved by their doctrine; and leading them on from proposition to proposition, of which they foresaw neither the conclusion nor consequences, he made them fall into absurdities, which showed in the most sensible and distinct manner the falsity of all their reasoning.

Two things contributed principally to their losing almost universally the opinion of the public. They set themselves up for perfect orators, who alone possessed the talent for speaking, and had carried elo-

quence. At the utmost heights of which it was capable. They valued themselves upon speaking extemporaneously, and without the least preparation, upon any subject that could be proposed to them. They boasted their being capable of giving their auditors whatever impressions they pleased; of teaching how to make the worst of causes good, and of making small things seem great, and great small, by dint of eloquence.¹ This Plato tells of Gorgias and Tisias. They were equally ready to maintain either side of any subject whatsoever. They held truth as nothing in their discourses, and made their eloquence subservient not to demonstrate it, and make it lovely, but as a mere wit-skinship, to give falsehood the colours of truth, and truth those of falsehood.

The great theatre in which they endeavoured to shine, was the Olympic games. There, as I have already said, in the presence of an infinite number of auditors assembled from all parts of Greece, they affectedly displayed whatever is most pompous in eloquence. With little or no regard for the solidity of things, they employed whatever is most glittering and most capable of dazzling the mind, proposing no other ends to themselves than to please the multitude, and obtain their suffrages. And this did not fail to ensue, their discourses being attended with universal applause. I need not observe how far such an affection might carry them, and how capable it was of ruining the taste for good and solid eloquence. This Socrates incessantly represented to the Athenians, as we find in several of Plato's dialogues, wherein he introduces him speaking upon this subject. For we must not imagine, when he attacks and condemns rhetoric as he often does, that he means the true and sound rhetoric. He valued it as it deserves, but could not suffer the infamous abuse which the sophists made of it, nor applaud, with the ignorant multitude, discourses, that had neither solidity nor any real beauty in them. For, instead of dressing eloquence like a majestic queen, in the noble and splendid ornaments that become her dignity, but have nothing affected or unnatural in them; the sophists set her off in a foreign, soft, effeminate garb, like a harlot, who derives all her graces from paint, has only borrowed beauties, and at most knows only how to charm the ears with the sound of a sweet harmonious voice. This is the idea which Quintilian and St. Jerome, conformably to Socrates, give us of the eloquence of the sophists, and I imagine the reader will not be offended if I repeat their own terms in this place. "Quapropter eloquentiam, licet hanc (ut sentio enim dicam) libidinosam resupina volupate auditoria proferent, nullam esse existimabo, quæ ne minimum quidem in se indicium masculini et incorrupti, ne dicam gravis et sancti viri, ostendat." Quasi ad Athenæum et ad auditoria convenitur, ut plausus circumstantium suscitantur, ut oratoria Rhetoricæ artis fucata mendacio, quasi quedam meretricula procedat in publicum, non tam eruditura populos, quam favorem populi quæsitura, et in modum psalterii et tibie dulce cenantibus demulcat auditientium.² Persons of good sense, from the remonstrances of Socrates, soon perceived the falsity of this eloquence, and abated very much of the esteem they had conceived for the sophists.

A second reason entirely lost them the people's opinion: namely, the defects and vices remarkable in their conduct. They were proud, haughty, and arrogant, full of contempt for others and of esteem for themselves. They conceived themselves the only persons that understood, and were capable of teaching youth, the principles of rhetoric and philosophy in a proper manner. They promised parents, with an air of assurance or rather impudence, entirely to reform the corrupt manners of their children, and to give them, in a short space of time, all the knowledge

that was necessary for filling the most important offices of the state.

They did not do all this for nothing, neither did they pique themselves upon generosity. Their prevailing vice was avarice, and an insatiable desire of amassing riches. What was smartly said of Apollonius the stoic³ philosopher, whom the emperor Antoninus caused to come from the east, to be preceptor to Marcus Aurelius whom he had adopted, may be applied to them.⁴ He brought several other philosophers to Rome, all *Argonauts*, said a Cynic of those times, and well inclined to go in quest of the golden fleece.⁵ The sophists sold their instructions at a very great price, and as they had found means to bait the parents with magnificent promises, and the world was infatuated with the belief of their knowledge and merit, they extorted boldly from them, and made the most of the warm desire people expressed for the good education of their children. Protagoras⁶ took of his disciples for teaching them rhetoric an hundred mine, or ten thousand drachmas, which is equal to five thousand livres.⁷ Gorgias, according to Diodorus Siculus and Suidas, had the same sum. Demosthenes paid as much for his instruction to the rhetorician Isæus.⁸ The perfect disinterestedness of Socrates, who had neither inheritance nor income, exposed still more by the contrast, the sordid avidity of the sophists, and was a continual censure of their conduct, much stronger than the sharpest reproaches he could have made them.

Notwithstanding these faults, which were personal to many of them, for some were not guilty of them, it must be confessed that the sophists rendered the public great services in the advancement of learning and the sciences, which were in a manner deposited with them for many ages.

Many cities of Greece and Asia, to which people went from different countries, to imbibe as at their source, all the sciences, have produced at all times sophists of great reputation. To abridge and conclude this article, I shall speak only of one of these sophists, the celebrated Libanius.

LIBANIUS was of a good family of Antioch.⁹ He studied at Athens, Ant. J. C. 339, where he remained about four years. He was appointed by the proconsul to teach rhetoric there at the age of twenty-five; but this nomination did not take place. He was a very zealous defender of paganism, which afterwards recommended him to the particular consideration of Julian the Apostate. He acquired great esteem by his wit and eloquence. He distinguished himself principally at Constantinople and Antioch. He was professor in the first of these cities for some years at different times, where he contracted a particular friendship with St. Basil, Ant. J. C. 395.¹⁰ That saint, before he went to Athens, came to Constantinople: and as that city abounded then with excellent philosophers and sophists, the vivacity and vast extent of his genius soon made him acquainted with whatever was best in their learning. Libanius,¹¹ whose scholar he seems to have made himself, had an high regard for him, young as he was, upon account of the gravity of his manners, worthy the wisdom of old age; which, says he, I admired the more, as he lived in a city where the allurements of pleasure were endless. When he was informed that this saint, notwithstanding his great reputation, had retired from the world, all pagan as he was, he could not but admire so generous an action, which equalled

⁵ It was this Apollonius, who, when he arrived at Rome, refused to go to the palace, saying, it was the pupil's business to come to the master. Antoninus only laughed at this foolish pride and fantastic oddity of the stoic's humour, (who had been well satisfied to come from the East to Rome, and when at Rome would not go from his house to the palace,) and sent Mar. Aurelius to hear him at home. That prince continued to go thither to receive his lessons, even after he rose to the imperial dignity.

any thing ever done by his philosophers. In all St. Basil's letters to him, we see the singular esteem he had for his works, and his affection for his person. He directed all the youth of Cappadocia, who desired to improve themselves in eloquence, to him, as the most excellent master of rhetoric then in being, and they were received by him with particular distinction. Libanius says a thing very much for his honour in relation to one of these young men, whose circumstances were very narrow: that is, that he did not consider his pupils' riches but their good will; that if he found a young man poor, who professed a great desire to learn, he preferred him, without hesitation, to the richest of his disciples; and that he was very well pleased, when those who had nothing to give, were earnest to receive his instruction.¹ He adds, that it had not been his good fortune to meet with such masters: And indeed disinterestedness was not the virtue of the sophists. Those whose profession it is to teach, know that the soil most fruitful in merit is poverty.

He writes to Themistius, a celebrated sophist, whom his talents and wisdom had raised to the highest employments in the state, in a manner that shows Libanius had noble sentiments, and the love of mankind at heart. "I do not congratulate you," says he, "upon the government of the city being conferred on you; but I congratulate the city upon having made choice of you for so important a trust. You want no new dignities, but the city is in great want of such a governor as you."

It were to be wished, that Libanius had been as irreproachable in regard to his manners, as he was estimable for his wit and eloquence. He is reproached with having been too full of esteem for himself, and too great an admirer of his own works. This

ought not to astonish us much. We might almost say, that vanity was the virtue of paganism.

Libanius passed the last thirty-five years of his life at Antioch, from the year 354, to about 390, and professed rhetoric there with great success. Christianity supplied him also with another illustrious disciple in the person of St. Chrysostom. His mother, who spared nothing for his education, sent him to Libanius's school, the most excellent and the most famous sophist, who then taught at Antioch, in order to his forming himself under so great a master. His works, from which he had been denominated *Golden Mouth*, show the progress he made there. At first he frequented the bar, pled some causes, and declaimed in public.² He sent one of these discourses in praise of the emperors to Libanius, who, in thanking him for it, tells him, that he and several other persons of learning to whom he had showed it, admired it. An author³ assures us, that some of his friends asking this sophist when he was near death, whom he should approve of to succeed him as professor, he replied, that he should have chosen our saint, if the Christians had not engrafted him: but his pupil had very different views.

If we may judge of the master by his scholars, and of his merit by their reputation, the two disciples of Libanius, whom I have now cited, might alone do him great honour. And indeed he passed for a great orator in the opinion of all the world. Eunapius⁴ says, that all his terms are curious and elegant, that whatever he writes has a peculiar sweetness and insinuating grace, with a sprightliness and gayety, that serves him instead of the salt of the ancients.

Libanius has left us a variety of writings, consisting of panegyrics, declamations, and letters: of all which, his letters have ever been the most esteemed.

OF THE SUPERIOR SCIENCES.

WE are now come to that part of literature, which is the greatest and most exalted in the order of natural knowledge, namely, Philosophy, and the Mathematics that are a branch of it. The latter have under them a great number of arts and sciences, which either depend upon or relate to them. The study of these requires, for succeeding in it, force and extent of mind, which natural qualities it highly improves. It is evident, that subjects so various, extensive, and important, can only be treated of very superficially in this place: neither do I pretend to take them all in, or to give an exact detail of them here. I shall confine myself to the most select, and shall treat of what seems most proper to gratify, or rather to excite the curiosity of readers little versed in such matters, and to give them some idea of the history of the great men, who have distinguished themselves in these sciences, and of the improvements they have acquired in coming down from the ancients to the moderns.

All the sciences of which I am to speak here, may be divided into two parts; Philosophy and the Mathematics. Philosophy will be the subject of this book; and Mathematics of the following, which will be the last.

OF PHILOSOPHY.

PHILOSOPHY is the study of nature and morality founded on the evidence of reason. This science was at first called *sophia*, *Wisdom*; and the professors of it *sophi*, *Sages*, or *Wisemen*. These names seemed too arrogant to Pythagoras, for which reason he substituted more modest ones to them, calling this science *Philosophy*, that is to say, love of wisdom;

and those who taught or applied themselves to it *Philosophers*, lovers of wisdom.

Almost in all times and in all civilized nations there have been studious persons of exalted genius who cultivated this science with great application: the priests in Egypt, the Magi in Persia, the Chaldeans in Babylon, the Brahmins or Gynnosophists in India, and the Druids among the Gauls. Though philosophy owes its origin to several of those I have now mentioned, I shall consider it here only as it appeared in Greece, which gave it new lustre, and became in a manner its school in general. Not only some individuals, dispersed here and there in different regions, from time to time make happy efforts, and by their writings and reputation give a shining, but short and transient light; but Greece, by a singular privilege, brought up and formed in her bosom, during a long and uninterrupted series of ages, a multitude, or, to speak more properly, a nation of philosophers, solely employed in inquiring after truth; many of whom with that view renounced their fortunes, quitted their countries, undertook long and laborious voyages, and passed their whole lives to extreme old age in study.

Can we believe that this tenacious union of learned and studious persons, of so long duration in one and the same country, was the mere effect of chance, and not of a peculiar Providence, which excited so numerous a succession of philosophers to support and perpetuate ancient tradition concerning certain essential and capital truths? How useful were their precepts upon morality, upon the virtues and duties in preventing the growth or rather inundation of depravity and vice? For instance what hideous disorder had

taken place, if the Epicurean had been the sole prevailing sect? How much did their disputes conduce to preserve the important doctrines of the difference between matter and mind, the immortality of the soul, and the existence of a supreme Being! It is not to be doubted, but God has revealed admirable principles to them upon all these points, preferably to the many other nations, whom barbarity continued in profound ignorance.¹ It is indeed true, that many of these philosophers advanced strange absurdities. And even all of them, according to St. Paul, "held the truth in unrighteousness—because that when they knew God, they glorified him not as God, neither were thankful."² None of their schools had ever the courage to maintain or prove the unity of God, though all the great philosophers were fully convinced of that truth. God has been pleased by their example to teach us, what man, abandoned to himself and his mere capacity, is. During four hundred years and upwards all these great geniuses, so subtle, penetrating, and profound, were incessantly disputing, examining, and dogmatizing, without being able to agree upon, or conclude any thing. They were not destined by God to be the light of the world: "Those did not the Lord choose, neither gave he the way of knowledge unto them."³

Philosophy, among the Greeks, was divided into two great sects: the one called the *Ionic*, founded by Thales of Ionia; the other the *Italic*, because it was established by Pythagoras in that part of Italy, called *Græcia Magna*. Both the one and the other were divided into many other branches, as we shall soon see.

This in general is the subject of my intended dissertation upon the philosophy of the ancients. It would swell to an immense size, were I to treat it in all its extent, which does not suit my plan. I shall content myself, therefore, in giving the history and opinions of the most distinguished among these philosophers, with relating what seems most important and instructive, and best adapted to gratify the just curiosity of a reader, who considers the actions and principles of these philosophers as an essential part of history, but a part of which it suffices to have a superficial knowledge and general idea. My guides among the ancients, will be Cicero in his philosophical works, and Diogenes Laertius in his treatise upon the philosophers; and among the moderns, the learned Englishman, Mr. Stanley, who has composed an excellent work upon this subject.

I shall divide my dissertation into two parts. In the first, I shall relate the history of the philosophers, without dwelling much upon their opinions: in the second, I shall treat the history of philosophy itself, and the principal maxims of the different sects.

PART FIRST.

HISTORY OF THE PHILOSOPHERS.

I shall run over all the sects of ancient philosophy, and give a brief history of the philosophers, who distinguished themselves most in each.

CHAPTER I.

OF THE IONIC SECT, TO THEIR DIVISION INTO VARIOUS BRANCHES.

THE *Ionic* sect, to reckon from Thales, who is considered as the founder of it, down to Philo and Antiochus, that Cicero heard, flourished above five hundred years.

THALES.

THALES was of Miletus, a famous city of Ionia.⁴ He was born in the first year of the 35th Olympiad, A. M. 3964, Ant. J. C. 640. To improve himself in the knowledge of the most learned persons of those times, he made several voyages, according to the custom of the ancients; at first into the island of

Crete, then into Phœnicia, and afterwards into Egypt, where he consulted the priests of Memphis, who cultivated the superior sciences with extreme application. Under these great masters he learned geometry, astronomy, and philosophy. A pupil of this kind does not long continue so. Thales accordingly proceeded very soon from lessons to discoveries. His masters of Memphis learned from him the method of measuring exactly the immense pyramids which still stand.

Egypt was at that time governed by Amasis, a prince who loved letters, because he was very learned himself. He set all the value it deserved upon the merit of Thales, and gave him public marks of his esteem. But that Greek philosopher, who was fond of liberty and independence, had not the talents for supporting himself in a court. He was a great astronomer, a great geometrician, and an excellent philosopher, but a bad courtier. The too free manner in which he declaimed against tyranny, displeased Amasis, and made him conceive impressions of distrust and fear of him, to his prejudice, which he did not take too much pains to remove, and which were followed soon after with his entire disgrace. Greece was the better for it. Thales quitted the court, and returned to Miletus to diffuse the treasures of Egypt in the bosom of his country.

The great progress he had made in the sciences, occasioned his being ranked in the number of the seven sages of Greece, so famed among the ancients. Of these seven sages, only Thales founded a sect of philosophers, because he applied himself to the contemplation of nature, formed a school and a system of doctrines, and had disciples and successors. The others made themselves remarkable only by a more regular kind of life, and some precepts of morality which they gave occasionally.

I have spoken elsewhere of these sages with some extent, as well as of many circumstances of the life of Thales: of his residence in the court of Cræsus, king of Lydia, and his conversation with Solon. I have repeated there the sensible pleasantry of a woman, who saw him fall into a ditch, whilst he was contemplating the stars: "How," said she to him, "should you know what passes in the heavens, when you do not see what is just at your feet?" and his ingenious manner of evading his mother when she pressed him earnestly to marry, by answering her when he was young, "It is too soon yet," and after his return from Egypt, "It is too late now." The reasons which had prevented Thales from giving himself chains by entering into the married state, made him prefer a life of tranquillity to the most splendid employments. Prompted by a warm desire of knowing nature, he studied it assiduously in the happy leisure, which a strict retirement afforded him, impenetrable to tumult and noise, but open to all whom the love of truth, or occasion for his counsel, brought to him. He quitted it very rarely; and that only to take a frugal repast at the house of his friend Thrasylbulus, who by his abilities became king of Miletus at the time of the treaty made by that city with Alyattes king of Lydia.

Cicero tells us,⁵ that Thales was the first of the Greeks who treated the subject of physics. The glory of having made several fine discoveries in astronomy is ascribed to him: of which, one that relates to the magnitude of the sun's diameter compared with the circle of his annual motion, gave him great pleasure. Accordingly a rich man, to whom he had imparted it, offering that philosopher whatever reward he thought fit for it, Thales asked him no other, but that he would give the honour of the discovery to its author. This is an instance of the character of the learned, who are more sensible to the honour of a new discovery than to the greatest rewards; and of the truth of what Tacitus says in speaking of Helvidius Priscus, "That the last thing the wise themselves renounce, is the desire of glory."⁶ He dis-

tinguished himself by his ability in foretelling the eclipses of the sun and moon with great exactness, which was considered in those times as a very wonderful matter.

St. Clemens Alexandrinus repeats two fine sayings of Thales, after Diogenes Laertius. Being asked one day what God was, he answered, "That which has neither beginning nor end."¹ Another asking him whether a man could conceal his actions from God: "How can that be," replied he, "as it is not in his power to conceal even his thoughts from him." Valerius Maximus adds, that Thales spoke thus, that the idea of God's presence to the most secret thoughts of the soul might induce men to keep their hearts as pure as their hands.² Cicero makes exactly the same remark, though in terms something different. Thales, says he, who was the wisest of the seven sages, believed it of the last importance for men to be convinced, that the Divinity filled all places, and saw all things, which would render them in consequence wiser and more religious.³

He died in the first year of the 58th Olympiad, A. M. 3456, Ant. J. C. 548, while present at the celebration of the Olympic games, aged ninety-two.

ANAXIMANDER.

THALES had for his successor Anaximander, his disciple and countryman. History has preserved no particular circumstances of his life. He departed from his master's doctrine in many points. It is said,⁴ that he forewarned the Lacedæmonians of the dreadful earthquake, which destroyed their city. He was succeeded by Anaximenes.

ANAXAGORAS.

ANAXAGORAS, one of the most illustrious philosophers of antiquity, was born at Clazomenæ in Ionia, about the 70th Olympiad, A. M. 3456, Ant. J. C. 500, and was the disciple of Anaximenes. The nobility of his extraction, his riches, and the generosity which induced him to abandon his patrimony, rendered him very considerable. Believing the cares of a family and an estate obstacles to his taste for contemplation, he renounced them absolutely, in order to devote his whole time and application to the study of wisdom, and the inquiry after truth, which were his only pleasures.⁵ When he returned into his own country after a long voyage, and saw all his lands lying abandoned and uncultivated, far from regretting the loss, he cried out, "I should have been undone, if all this had not been ruined."⁶ Socrates, in his ironical way, affirmed that the sophists of his time had more wisdom than Anaxagoras; as, instead of renouncing their estates like him, they laboured strenuously to enrich themselves, convinced as they were of the stupidity of old times, and that "the wise man ought to be wise for himself," that is to say, that they ought to employ their whole pains and industry in amassing as much money as possible.

Anaxagoras, in order to apply himself wholly to study, renounced the cares and honours of govern-

ment. No man however was more capable of succeeding in public affairs. We may judge of his abilities in that way from the wonderful progress made by his pupil Pericles in policy. It was to him he was indebted for those grave and majestic manners, that rendered him so capable of governing the commonwealth.⁷ It was he who laid the foundation of that sublime and triumphant eloquence, which acquired him so much power; and who taught him to fear the gods without superstition. In a word, he was his counsellor, and assisted him with his advice in the most important affairs, as Pericles himself declared.⁸ I have elsewhere mentioned the little care the latter took of his master, and that Anaxagoras wanting the necessities of life, resolved to suffer himself to die of hunger. Pericles upon this news flew to his house and earnestly entreated him to renounce so melancholy a resolution; "When one would use a lamp," replied the philosopher, "one takes care to supply it with oil, that it may not go out." Wholly engrossed in the study of the secrets of nature, which was his passion, he had equally abandoned riches and public affairs. Upon being asked one day,⁹ whether he had no manner of regard for the good of his country; "Yes, yes," said he, lifting up his hand towards heaven, "I have an extreme regard for the good of my country." He was asked another time to what end he was born; to which he answered, "To contemplate the sun, moon, and skies." Is that then the end to which man is destined?

He came to Athens at the age of twenty, about the first year of the 75th Olympiad, A. M. 3484, Ant. J. C. 480, very near the time of Xerxes's expedition against Greece.¹⁰ Some authors say, that he brought thither the school of philosophy, which had flourished in Ionia, from its founder Thales. He continued and taught at Athens during thirty years.

The circumstances and event of the persecution fomented against him at Athens for impiety are differently related. The opinion of those, who believe that Pericles could find no surer method for preserving that philosopher, than to make him quit Athens, seems the most probable. The reason, or rather the pretext, for so heavy an accusation was, that, in teaching upon the nature of the sun, he defined it "a mass of burning matter;" as if he had thereby degraded the sun, and excluded it from the number of the gods. It is not easy to comprehend, how in so learned a city as Athens, a philosopher should not be allowed to explain the properties of the stars by physical reasons, without hazarding his life. But the whole affair was an intrigue and a cabal of the enemies of Pericles, who were for destroying him, and endeavoured to render himself suspected of impiety, from his great intimacy with this philosopher.

Anaxagoras was found guilty through contumacy, and condemned to die. When he received this news, he said, without showing any emotion: "Nature has long ago passed sentence of death upon my judges, as well as me." He remained at Lampsacus during the rest of his life. In his last sickness, upon his friends asking him, whether he would have his body carried to Clazomenæ after his death: "No," said he, "that is unnecessary. The way to the infernal regions" is as long from one place as another.¹¹ When the principal persons of the city came to receive his last orders, and to know what he desired of them after his death; he replied, nothing, except that the youth might have leave to play every year upon the day of his death. This was done accordingly, and continued a custom to the time of Diogenes Laertius. He is said to have lived sixty-two years. Great honours were paid, and even an altar erected to him.

ARCHELAUS.

ARCHELAUS, of Athens, according to some, and of

¹¹ Ibid. p. 162.

¹² Ibid.

Miletus according to others, was the disciple and successor of Anaxagoras, in whose doctrine he made little alteration. Some say that it was he who transported philosophy from Ionia to Athens. He confined himself principally to physics, as his predecessors had done: but he introduced ethics a little more than them. He formed a disciple, who placed them highly in honour, and made them his capital study.

SOCRATES.

THIS disciple of Archelaus was the famous Socrates, who had been also the pupil of Anaxagoras. He was born in the fourth year of the 77th Olympiad, A. M. 3534, and died the first of the 95th, A. M. 3604, after having lived seventy years.

Cicero has observed in more than one place,¹ that Socrates, considering that all the vain speculations upon the things of nature tended to nothing useful, and did not contribute to render man more virtuous, devoted himself wholly to the study of morality. "He was the first," says he, "who brought philosophy down from heaven," where she had been employed till then in contemplating the course of the stars; "who established her in cities, introduced her into private houses, and obliged her to direct her inquiries to what concerned the manners, duties, virtues, and vices of life."² Socrates is therefore considered with reason as a founder of moral philosophy among the Greeks. This was not because he had not perfectly studied the other branches of philosophy: he possessed them all in a supreme degree, having industriously formed himself in them. But as he judged them of little use in the conduct of life, he made little use of them; and, if we may believe Xenophon,³ he was never heard in his disputes to mention either astronomy, geometry, or the other sublime sciences, that had solely employed preceding philosophers; in which Xenophon seems designedly to contradict and refute Plato, who often puts subjects of that kind into the mouth of Socrates.

I shall say nothing here either of the circumstances of the life and death of Socrates, or of his opinions: I have done that elsewhere with sufficient extent. It only remains for me to speak of his disciples, who though all of them made it their honour to acknowledge Socrates their chief, were divided in their opinions.

XENOPHON.

XENOPHON was certainly one of the most illustrious disciples of Socrates, but did not form a sect; for which reason I separate him from the rest. He was as great a warrior as philosopher. I have related at large he share he had in the famous retreat of the Ten Thousand. His adherence to the party of young Cyrus, who had declared himself openly against the Athenians, drew upon him their hatred, and occasioned his banishment. After his return from the expedition against Artaxerxes, he attached himself to Agesilaus king of Sparta, who then commanded in Asia.⁴ As Agesilaus knew perfectly well how to distinguish merit, he had always a most peculiar regard for Xenophon, and upon being recalled by the Ephori for the defence of his country, carried the Athenian general thither along with him. Xenophon after various events retired to Corinth with his two sons, where he passed the rest of his days. In the war between the Thebans and Lacedæmonians, when the people of Athens resolved to aid the latter, he sent his two sons to that city. Gryllus signalized himself in a peculiar manner in the battle of Mantinea, and some pretend that it was he who wounded Epaminondas in the action. He did not survive so glorious an exploit long, but was killed himself. The news of his death was brought to his father, whilst he was offering a sacrifice. Upon hearing it he took the wreath from his head; but upon being informed

by the courier, that his son fell fighting gloriously, he immediately put it on again, and continued the sacrifice without shedding a single tear, saying coldly "I knew the son to whom I gave life was not immortal." Might not this be called a constancy, or rather hardness of heart, truly Spartan?

Xenophon died in the first year of the 105th Olympiad, A. M. 3644, Ant. J. C. 360, aged ninety.

I shall speak elsewhere of his works. He was the first who reduced to writing, and published the discourses of Socrates, but exactly as they came from his mouth, and without any additions of his own, as Plato made to them.

It is pretended that there was a secret jealousy between these two philosophers, little worthy of the name they bore, and the profession of wisdom upon which they both piqued themselves: and some proofs are given of this jealousy.⁵ Plato never mentions Xenophon in any of his books, which are very numerous, nor Xenophon him, though they both frequently speak of the disciples of Socrates. Besides, all the world knows that the Cyropædia of Xenophon is a book, in which, relating the history of Cyrus, whose education he extols, he lays down the model of an accomplished prince, and the idea of a perfect government. We are told, that he composed this piece with no other design but to contradict Plato's Commonwealth, which had lately appeared; and that Plato was so angry upon that account, that to discredit this work, he spoke of Cyrus, in a book which he afterwards wrote,⁶ as of a prince indeed of great courage and love of his country; but one, whose education had been very bad.⁷ Anlus Gellius, who relates what I have now said, cannot imagine that two such great philosophers as those in question, could be capable of so mean a jealousy; (it is however but too common among men of letters) and he chooses rather to ascribe it to their admirers and partizans. And indeed it often happens that disciples, through a too partial zeal, are more delicate in respect to the reputation of their masters, and urge what concerns them with greater warmth, than themselves.

CHAPTER II.

DIVISION OF THE IONIC PHILOSOPHY INTO DIFFERENT SECTS.

BEFORE Socrates there had been no different sects among the philosophers, though their opinions were not always the same; but from his time many rose up, of which some continued longer in vogue, and others were of shorter duration. I shall begin with the latter, which are the Cyrenaic, Megarean, Elian, and Eretrian sects. They take their names from the places where they were situated.

ARTICLE I.

OF THE CYRENAIC SECT.

ARISTIPPUS.

ARISTIPPUS was the chief of the Cyrenaic sect.⁸ He was originally of Cyrene in Libya. The great reputation of Socrates induced him to quit his country, in order to settle at Athens, and to have the pleasure of hearing him. He was one of that philosopher's principal disciples: but he led a life very repugnant to the precepts taught in that excellent school, and when he returned into his own country, opened a very different course for his disciples. The great principle of his doctrine was, that the supreme good of man during this life is pleasure. His manners did not belie his opinions, and he employed a ready and agreeable turn of wit in eluding, by pleasures, the just reproaches made him on account of his excesses. He perpetually abandoned himself to feasting and women. When he was rallied upon his intercourse with the courtesan Lais: "True," said he, "I possess Lais,

³ Epist. ad Æschin.

⁴ Diog. Laert.

but not Lais me."¹ Upon being reproached for living with too much splendour, he replied: "If good living were a crime, there would not be so much feasting on the festivals of the gods."

The reputation of Dionysius the tyrant, whose court was the centre of pleasures, whose purse was said to be always open to the learned, and whose table was always served with the utmost magnificence, drew him to Syracuse. As his wit was supple, ready, and insinuating, and he omitted no occasion of soothing the prince, and bore his raillery and intervals of bad humour with a patience next to slavish, he had abundance of credit in that court. Dionysius asking him one day, why philosophers were always seen in the houses of the great, and the great never in those of philosophers? "It is," replied Aristippus, "because philosophers know what they want, and the great do not."

"If Aristippus could content himself with herbs," said Diogenes the Cynic to him, "he would not be so base as to court princes." "If my critic," replied Aristippus, "knew how to make his court to princes, he would not content himself with herbs."

Si pranderet olus patienter, Regibus uti
Nollet Aristippus. Si sciret Regibus uti
Fastidiret olus qui me notat.—*Hor. Ep. xvii. l. 1.*

The one's view was good living, the other's to be admired by the people.

Scuror ego ipse mili, populo tu.

And which is best? Horace without hesitating, gives Aristippus the preference, whom he praises in more than one place. He resembled him too much himself, not to do so. However, he dares not abandon himself to the principles of Aristippus; and falls insensibly into them by propensity of nature.

Nunc in Aristippi furtim præcepta relabor.
Id. Ep. i. l. 1.

So mean is the love of pleasure, that let those who give themselves up to it dissemble ever so well, they cannot entirely conceal their shame!

Aristippus was the first disciple of Socrates that took a certain premium from those he taught, which gave his master great offence. Having demanded fifty drachmas of a man for teaching his son: "How! fifty drachmas," cried the father! "Why, that's enough to buy a slave." "Indeed?" replied Aristippus, "buy him then, and you'll have two."

Aristippus died on his return from Syracuse to Cyrene. He had a daughter, named Areta, whom he took great care to educate in his own principles, in which she became a great proficient. She instructed her son Aristippus, surnamed *μυτρός/μακτός*, in them herself.

THEODORUS.

THEODORUS, the disciple of Aristippus, besides the other principles of the Cyrenaics, publicly taught that there were no gods.² The people of Cyrene banished him. He took refuge at Athens, where he would have been tried and condemned in the Areopagus, if Demetrius Phalereus had not found means to save him. Ptolemy the son of Lagus received him into his service, and sent him once as his ambassador to Lysimachus. The philosopher spoke to that prince with so much impudence, that one of his ministers, who was present, said, "I fancy, Theodorus, you imagine there are no kings, as well as no gods."

It is believed that this philosopher was at last condemned to die, and obliged to take poison.

We see here that the impious doctrine of atheism, contrary to the general and immemorial belief of mankind, scandalized and offended all nations so much, as to be deemed worthy of death. It owes its birth to teachers abandoned to the debauches of women and the table, and who propose to themselves the pleasures of the senses as the great ends of being.

¹ Ne Aristippus quidem ille Socraticus erubuit, cum esset obiectum habere eum Lais: Habeo, inquit, Laisida, non habeo à Laiside. *Cic. Ep. xvi. l. 9. Ad. Fam.*

² About 25 shillings

³ Laort.

ARTICLE II.

OF THE MEGARIAN SECT.

It was instituted by Euclid, who was of Megara, a city of Achaia, near the Isthmus of Corinth. He actually studied under Socrates at Athens, at the time of the famous decree, that partly occasioned the Peloponnesian war, by which the citizens of Megara were prohibited to set foot in Athens upon pain of death. So great a danger could not abate his zeal for the study of wisdom. In the disguise of a woman he entered the city in the evening, passed the night with Socrates, and went back before light, going regularly every day almost ten leagues forwards and backwards.⁴ There are few examples of so warm and constant an ardour for knowledge. He departed very little from his master's opinions. After the death of Socrates, Plato and other philosophers, who apprehended the effects of it, retired to him at Megara, who gave them a very good reception. His brother one day in great rage upon some particular subject of discontent, said to him: "May I perish if I am not revenged on you." "And may I perish," replied Euclid, "if my kindness does not at length correct this violence of your temper, and make you as much my friend as ever."

The Euclid of whom we speak, is not Euclid the mathematician, who was also of Megara, but flourished above ninety years after under the first of the Ptolemies.

His successor was Eubulides, who had been his disciple. Diodorus succeeded the latter. We find in the sequel, that these three philosophers contributed very much to the introduction into logical disputations of a bad taste for subtle reasonings, founded solely upon sophisms.

I shall almost pass over in silence what regards the Elian and Eretrian sects, which include few things of any importance.

ARTICLE III.

OF THE ELIAN AND ERETRIAN SECTS.

I place these two sects together, and reduce what I have to say of them to a few words, as they contain nothing important.

The Elian sect was founded by Phædon, one of the favourite disciples of Socrates. He was of Elis in Peloponnesus.

The Eretrian was so called from Eretria a city of Eubœa, the country of Menedemus its founder.

ARTICLE IV.

OF THE THREE SECTS OF ACADEMIES.

OF all the sects the school of Socrates brought forth, the most famous was the *Academic*, so called from the place where they assembled, which was the house of an ancient hero of Athens, named *Academos*, situated in the suburbs of that city, where Plato taught. We have seen in the history of Cimon the Athenian general, who sought to distinguish himself no less by his love for learning and learned men than his military exploits, that he adorned the academy with fountains and walks of trees for the convenience of the philosophers who assembled there. From that time all places, where men of letters assemble, have been called Academies.

Three Academies, or sects of Academics, are reckoned. Plato was the founder of the *ancient*, or first. Arcesilaus, one of his successors, made some alteration in his philosophy, and by that reformation founded what is called the *middle* or second academy. The *new*, or third academy, is attributed to Carneades. We shall soon see wherein their difference consisted.

SECTION I.—OF THE ANCIENT ACADEMY.

THOSE who made it flourish in succession to one another were Plato, Speusippus, Xenocrates, Polemon, and Crantor.

⁴ Amplius viginti milia.

PLATO.

PLATO was born in the first year of the 88th Olympiad, A. M. 3576, Ant. J. C. 423. He was at first called Aristocles from the name of his grandfather; but his master of the palestra called him Plato from his large and broad shoulders, which name he retained. Whilst he was an infant in arms, sleeping one day under a myrtle, a swarm of bees settled upon his lips, which was taken for an omen, that the child would prove very eloquent, and distinguish himself highly by the sweetness of his style. This came to pass, whatever we may think of the augury; whence the surname of *Apis Attica*, Athenian bee, was given him. He studied grammar, music, and painting, under the most able masters. He applied himself also to poetry, and even composed tragedies, which he burned at the age of twenty, after having heard Socrates. He attached himself solely to that philosopher; and as he was exceedingly inclined to virtue by nature, made such improvements from the lessons of his master, that at twenty-five he gave extraordinary proof of his wisdom.

The fate of Athens was at that time (A. M. 3600, Ant. J. C. 404,) very deplorable. Lysander, the Lacedæmonian general, had established the thirty tyrants here. Plato's merit, which was already well known, induced them to use their utmost endeavours to engage him in their party, and to oblige him to share in the affairs of the government. To this he consented at first, with the hope either of opposing, or at least of softening, the tyranny; but he presently perceived, that the evil had no remedy, and that to share in the public affairs, it was necessary either to render himself an accomplice of their crimes, or the victim of their appetites. He therefore waited a more favourable occasion. That time (A. M. 3602, Ant. J. C. 402,) seemed soon after to be arrived. The tyrants were expelled, and the form of the government entirely changed. But the affairs of the public were in no better a condition, and the state received new wounds every day. Socrates himself was sacrificed to the malice of his enemies. Plato retired to the house of Euclid at Megara, whence he went to Cyrene, to cultivate the mathematics under Theodorus, the greatest mathematician of his time. He afterwards visited Egypt, and conversed a great while with the Egyptian priests, who taught him great part of their traditions. It is even believed, that they made him acquainted with the books of Moses, and the prophets. Not content with all these acquisitions, he went to that part of Italy called Græcia Magna, to hear the three most famous Pythagoreans of those times, Philolaus, Archytus of Tarentum, and Eurytus. Thence he went into Sicily, to see the wonders of that island, and especially the volcano of mount Etna. This voyage, which was a mere effect of his curiosity, laid the first foundations of the liberty of Syracuse, as I have explained at large in the history of Dionysius, the father and son, and in that of Dion. He intended to have gone to Persia, in order to have consulted the Magi: but was prevented by the wars, which at that time troubled Asia. At his return to his country, after all his travels, in which he had acquired much curious knowledge, he settled his abode in the quarter of the suburb of Athens called the Academy, (of which we have spoken above) where he gave his lessons, and formed so many illustrious disciples.

Plato composed a system of doctrine from the opinions of three philosophers. He followed Heraclitus in natural and sensible things; that is to say, he believed with Heraclitus, that there was but one world; that all things were produced by their contraries; that motion, which he calls war, occasions the production of beings, and rest their dissolution. He followed Pythagoras in intellectual truths, or what we call metaphysics: that is to say, he taught as that philosopher did, that there is but one God, the author of all things; that the soul is immortal; that men have only to take pains to purge themselves of their passions and vices, in order to be united to God; that after this life there is a reward for the good, and a

punishment for the wicked; that between God and man there are various orders of spirits, which are the ministers of the Supreme Being. He had also taken the Metempsychosis from Pythagoras, but given it a construction of his own. And finally, he imitated Socrates in respect to morality and politics; that is to say, he reduced every thing to the manners, and laboured only to incline all men to discharge the duties of the situation of life, in which the Divine Providence has placed them. He also very much improved logic, or, which is the same thing, the art of reasoning with order and exactness.

All the works of Plato, except his letters, of which only twelve have come down to us, are in the form of dialogues. He purposely chose that manner of writing, as more agreeable, familiar, comprehensive, and better adapted to instruct and persuade, than any other. By the help of it he succeeded wonderfully in placing truths in their full light. He gives to each of his speakers his proper character; and by an admirable chain of reasons, which necessarily induce each other, he leads them on to admit, or rather to say themselves, all he would prove to them.¹

As to his style, it is impossible to imagine any thing greater, more noble, or more majestic; that, says Quintilian, he seems not to speak the language of men, but of the gods.² The flow and numbers of his elocution form a harmony scarce inferior to that of Homer's poetry; and the Atticisms, which, among the Greeks, was in point of style whatever was finest, most delicate, and most perfect in every kind, prevails in it universally, and shows itself everywhere in a manner entirely peculiar. But neither the beauty of style, the elegance and happiness of expressions, nor the harmony of numbers, constitute the value of Plato's writings. What is most to be admired in them, is the solidity and greatness of the sentiments, maxims, and principles diffused throughout them, whether for the conduct of life, policy, government, or religion. I shall cite some passages from them in the sequel.

Plato died in the first year of the 108th Olympiad, (A. M. 3856, Ant. J. C. 348,) which was the thirteenth of the reign of Philip of Macedon, aged eighty-one, and upon the same day in which he was born.

He had many disciples, of whom the most distinguished were Speusippus his nephew by the mother's side, Xenocrates of Chalcedon, and the celebrated Aristotle. Theophrastus is also said to have been of the number of his hearers, and Demosthenes to have always considered him as his master; of which his style is a good proof. Dion, the brother-in-law of Dionysius the tyrant, also did him great honour by his excellent character, his inviolable attachment to his person, his extraordinary taste for philosophy, the rare qualities of his head and heart, and his great and heroic actions for re-establishing the liberty of his country.

After the death of Plato, his disciples divided themselves into two sects.³ The first continued to teach in the Academy, the name of which they retained. The others settled their school in the Lyceum, a place in Athens adorned with porticoes and gardens. They were called Peripatetics, and had Aristotle for their founder. These two sects differed only in name, and agreed as to opinions. They had both renounced the custom and maxim of Socrates, which was to affirm nothing, and to explain themselves in disputes only dubiously and with reserve. I shall speak of the Peripatetics in the sequel, when I have briefly related the history of the philosophers who fixed their residence in the Academy.

SPEUSIPPUS.

I HAVE already said that he was Plato's nephew.⁴ His conduct was so very irregular in his youth, that

his parents turned him out of their house. That of his uncle became his asylum. Plato behaved to him as if he had never heard of his debauched life. His friends were shocked and amazed at his placing his kindness on one so undeserving, and blamed him for taking no pains to correct his nephew, and reform his dissolute manners. He replied calmly, that he laboured more effectually to that purpose than they imagined, in showing him by his own manner of living the infinite difference between virtue and vice, and between decency and depravity. And indeed that method succeeded so well, that it inspired Speusippus with a very great respect for him, and a violent desire of imitating him, and of devoting himself to philosophy, in the study of which he afterwards made very great proficiency. It requires no common address to manage the spirit of a vicious young man, and to bring him over to a sense of his duty. The boiling heat of youth seldom gives way to violence, which often serves only to inflame and precipitate it into despair.

Plato had cultivated a particular intimacy between Speusippus and Dion, with a view of softening the austere temper of the latter, by the gaiety and insinuating manners of his nephew.

He succeeded his uncle in the school after his death, but held it only eight years; after which his infirmities obliged him to resign it to Xenocrates. Speusippus did not depart from Plato's doctrine, but was not studious to imitate him in his practice. He was choleric, loved pleasure, and seemed self-interested; for he exacted a premium from his disciples, contrary to the custom and principles of Plato.

XENOCRATES.

XENOCRATES was of Chalcedon, and became very early Plato's disciple. He studied under that great master at the same time as Aristotle, but not with the same talents. He had occasion for a spur, and the other for a bridle; which are Plato's own words of them, who added, that in putting them together, he coupled a horse with an ass. He is praised for not being discouraged by the slowness of his parts, which made study much more laborious to him than to others. Plutarch¹ uses the example of him, and that of Cleanthes, to encourage such as perceive they have less penetration and vivacity than others, and exhorts them to imitate these two great philosophers, and like them, to set themselves above the ridicule of their companions. If Xenocrates, from the heaviness of his genius, was inferior to Aristotle, he far surpassed him in practical philosophy and purity of manners.

He was naturally melancholy, and had something stiff and austere in his temper;² for which reason Plato often advised him "to sacrifice to the Graces," signifying clearly enough by those words, that it was necessary for him to soften the severity of his temper.³ He sometimes reproved him for that fault with more force, and less reserve, apprehending that his pupil's want of politeness and good nature would become an obstacle to all the good effects of his instruction and example. Xenocrates was not insensible to these reproaches: but they never diminished the profound respect he always had for his master. And when endeavours were used to make him angry with Plato, and he was provoked to defend himself with some vivacity, he stopped the mouths of his indiscreet friends with saying, "He uses me so for my good." He took Plato's place in the second year of the 110th Olympiad, A. M. 3666.

Diogenes Laërtius⁴ says, that he loved neither pleasure, riches, nor praise. He showed on many occasions a generous and noble disinterestedness. The court of Macedonia had the reputation of retaining a great number of pensioners and spies in all the neighbouring republics, and to corrupt with bribes all persons sent to negotiate with them. Xenocrates was deputed with some other Athenians to Philip. That prince, who perfectly understood the art of insinua-

ting into people's favour, applied himself in a particular manner to Xenocrates, whose merit and reputation he was apprized of. When he found him inaccessible to presents and interest, he endeavoured to mortify him by an affected contempt, and ill-treatment, not admitting him to his conferences with the other ambassadors from the commonwealth of Athens, whom he had corrupted by his caresses, feasts, and liberalities. Our philosopher, firm and unalterable in his principles, retained all his stiffness and integrity, and though wholly excluded, continued perfectly easy, and never appeared either at audiences or feasts as his colleagues did. At their return to Athens, his colleagues endeavoured in concert to discredit him with the people, and complained, that he had been of no manner of use to them in this embassy; in consequence of which he was very near having a fine laid on him. Xenocrates, forced by the injustice of his accusers to break silence, explained all that had passed in Philip's court, made the people sensible of what importance it was to have a strict eye upon the conduct of deputies who had sold themselves to the enemy of the commonwealth, covered his colleagues with shame and confusion, and acquired immortal glory. His disinterestedness was also put to the proof by Alexander the Great.⁵ The ambassadors of that prince, who, without doubt, came to Athens upon account of some negotiation, (neither the time nor the affair are said) offered Xenocrates from their master fifty talents, or fifty thousand crowns. Xenocrates invited them to supper. The entertainment was simple, frugal, plain, and truly philosophical. The next day the deputies asked him, into whose hands they should pay the money they had orders to give him? "How!" said he to them, "did not my least yesterday inform you, that I have no occasion for money?" He added, that Alexander was more in want of it than he, because he had more mouths to feed. Seeing that his answer made them sad, he accepted of thirty minæ (about seventy-five pounds) that he might not seem to despise the king's liberality out of pride. Thus, says an historian, in concluding his account of this fact, the king would have purchased the friendship of the philosopher, and the philosopher would not sell it to the king.⁶

His disinterestedness must have reduced him to great poverty, as he could not discharge a certain tax, which strangers were obliged to pay yearly into the public treasury of Athens. Plutarch⁷ tells us, that one day, as they were hauling him to prison for not having paid this tribute, the orator Lycurgus discharged the sum, and took him out of the hands of the farmers of the revenue, who frequently are not too sensible of the merit of the learned. Xenocrates some days after meeting the son of his deliverer, told him; "I pay your father the favour he did me with interest; for all the world praises him upon my account." Diogenes Laërtius⁸ tells us something very like this of him, which perhaps is the same fact disguised under different circumstances. He says, that the Athenians sold him, because he could not pay the capitation laid upon strangers: but that Demetrius Phalereus bought him, and immediately gave him his liberty. It is not very probable, that the Athenians should treat a philosopher of the reputation of Xenocrates with so much cruelty.

Athens had a very high idea of his probity.⁹ One day when he appeared before the judges to give evidence in some affair, on his going towards the altar, in order to swear that what he had affirmed was true, all the judges rose up, and would not suffer him to do so, declaring that his word was as satisfactory to them as an oath.

⁴ Diog. Laert.

⁵ Diog. Laert.

Happening in company, where abundance of scandal was talked, he did not share in it, and continued mute. Upon being asked by somebody the reason of his profound silence, he replied: "It is because I have often repented of speaking, but never of holding my tongue."

He had a very fine maxim upon the education of youth, which it were to be wished parents would cause to be observed in their houses.¹ He was, from their earliest infancy, for having wise and virtuous discourses often repeated in their presence; but without affectation,² in order that they might seize in a manner their ears, as a place hitherto unoccupied, through which virtue and vice might equally penetrate to the heart; and that these wise and virtuous discourses, like faithful sentinels, should keep the entrance firmly closed against all words that might corrupt the purity of manners in the least, till by long habit youth were become strong, and their ears safe against the envenomed breath of bad conversation.³

According to Xenocrates, there are no true philosophers but those who do that voluntarily and of their own accord, which others do only through fear of punishment and the laws.⁴

He composed several works, amongst the rest one upon the method of reigning well; at least Alexander asked it of him.⁵

He lost little time in visits, was very fond of the retirement of his study, and meditated much. He seldom was seen in the streets: but when he appeared there, the debauched youth used to fly to avoid meeting him.

A young Athenian, more vicious than the rest, and absolutely infamous for his irregularities, in which he gloried, was not so much awed by him.⁶ His name was Polemon. After a debauch, passing by the school of Xenocrates, and finding the door open, he went in, full of wine, sweet with essence, and with a wreath on his head. In this condition he took his seat among the auditors, less to hear than out of insolence. The whole assembly were strangely surprised and offended. Xenocrates, without the least emotion or change of countenance, only varied the discourse, and went on with speaking upon temperance and sobriety, all the advantages of which he set in full light, by opposing to those virtues the shame and turpitude of the contrary vices. The young libertine, who listened with attention, opened his eyes to the deformity of his condition, and was ashamed of himself. The wreath falls from his head; with downcast eyes he hides himself in his cloak, and instead of that gay insolence which he had shown on entering the school, he appears serious and thoughtful.⁷ An entire change of conduct ensued; and absolutely cured of his bad passions by a single discourse, from an infamous debauchee, he became an excellent philosopher, and made a happy amends for the vices of his youth by a wise and regular course of life, from which he never departed.

Xenocrates died at the age of eighty-two, A. M. 3688, Ant. J. C. 316, in the first year of the 116th Olympiad.

POLEMON. CRATES. CRANTOR.

I join these three philosophers under the same title, because little is known of their lives.

¹ Plut. de Audit. p. 38.

² Τὸν λόγον τοὺς φιλοσοφικοὺς οὐκ ἔστιν ἀποδοῦναι, καὶ ἐν τῇ ἡλικίᾳ, ὅπου οὐκ ἔστιν ἀποδοῦναι, ἀλλὰ ἐν τῇ ἡλικίᾳ, ὅπου οὐκ ἔστιν ἀποδοῦναι, ἀλλὰ ἐν τῇ ἡλικίᾳ, ὅπου οὐκ ἔστιν ἀποδοῦναι.

³ He alludes to the Athletæ, who in boxing used to cover their heads and ears with a kind of leathern cap, to deaden the violence of the blows. He says that this precaution is much more necessary to youth. For all the risk the Athletæ run was of having their ears hurt; whereas, young persons hazard their innocence, and even the loss of themselves.

⁵ Diog. Laert. Val. Max. l. vi. c. 90.

⁶ Plut. de Virt. Moral. p. 446.

⁷ Mutatus Polemon? Ponas insignis morbi,

Fasciolas, cubitali, fœcilia? potus ut ille

Ducitur ex collo furtim carpsisse coronas,

Postquam est impruvis corruptus voce magistri.

Hor. Sat. iii. l. 3.

Polemon worthily succeeded his master Xenocrates, and never departed from his opinions, nor the example of wisdom and sobriety, which he had set him. He renounced wine in such a manner at the age of thirty, which was the time his celebrated change of conduct began, that during the rest of his life he never drank any thing but water.⁸

Crates, who was his successor, is little known, and must be distinguished from a cynic philosopher of the same name, of whom we shall speak in the sequel.

Crantor was more famous. He was of Soli in Cilicia. He quitted his native country, and came to Athens, where he was the disciple of Xenocrates at the same time with Polemon. He passes for one of the great pillars of the Platonic sect.⁹ What Horace says of him in praising Homer, argues the great reputation of this philosopher, and how much his principles of morality were in esteem:

Qui quid sit pulchrum, quid turpe, quid utile, quid non,

Plenius ac melius Chrysippo et Crantore dicit.

Hor. Ep. ii. l. 1.

Who tells what's great, what mean, what fit, what not,
Better than Crantor or Chrysippus taught.

The same cannot be said of his principles upon the nature of the soul, as we shall see in its place.

He wrote a book upon *Consolation*,¹⁰ which is lost: it was addressed to Hippocles, whom an early death had deprived of all his children. It is mentioned as a book of gold, of which every word deserved to be got by heart.¹¹ Cicero had made great use of it in a tract that bore the same title. Arcesilaus the author of the middle Academy was his disciple.

SECTION II.—OF THE MIDDLE ACADEMY.

It is so called, because it flourished between the ancient Academy instituted by Plato, and the new that soon succeeded it, of which Carneades was the author.

ARCESILAUS.

ARCESILAUS was born at Pitane in Æolia.¹² He went to Athens, and became the disciple of the greatest philosophers, of which number were Polemon, Theophrastus, Crantor, Diodorus, and Pyrrho.¹³ It was evidently of the last that he learned to doubt every thing. He was only an academic by name, which he retained out of respect to Crantor, upon being whose disciple he valued himself. He succeeded Crates, or according to others, Polemon, as professor in the Platonic school, in which he became an innovator,¹⁴ for he founded a sect, which was called the second or middle Academy, to distinguish it from that of Plato. He was very opposite to the Dogmatists, or the philosophers who affirmed and decided. He seemed to doubt all things; maintained both sides of a question, and determined nothing. He had a great number of disciples. To attack all the sciences, and to reject not only the evidence of the senses, but of reason, was certainly the boldest undertaking that could be formed in the republic of letters. To hope any success in it, required all the merit of Arcesilaus. He was by nature of a happy, ready, warm, genius: his person was very graceful, and his manner of speaking happy and delightful.¹⁵ The beauty of his aspect admirably seconded the charms of his utterance. Accordingly Lucullus, who learnedly and solidly routes the opinion of the Academics, says that nobody would have followed the opinion of Arcesilaus, if the eloquence and address

of the teacher had not covered, and made the manifest absurdity of his doctrine disappear.¹

Things much for his honour are related of his liberality. He delighted in doing good, and was not willing that it should be known.² Visiting a friend³ who was sick, and wanted necessities, but was ashamed to own it, he dexterously slid a purse full of money under his pillow, to spare his shame and delicacy, and that he might seem rather to have found than accepted it.⁴ Authors do not give so favourable a testimony of the purity of his manners, and accuse him of the most infamous vices.⁵ And that ought not to appear strange in a philosopher, who, doubting every thing, doubted, in consequence, the existence of virtue and vice, and could not really admit any rule in respect to the duties of civil life. He did not care to have any part in the public affairs.⁶ However, having been chosen to go to Demetrias in order to negotiate for his country with Antigonus, he accepted the deputation, but returned without success. In the torments of the gout, he affected the patience and insensibility of a Stoic.⁷ "Nothing from these has reached this," said he, pointing to his feet and touching his breast,⁸ to Carneades the Epicurean, who was much concerned to see him suffer in that manner. He was for making the other believe, that his soul was inaccessible to pain. Lofly language, with nothing real in it but pride!

Arcesilaus flourished about the 120th Olympiad, that is, about the year of the world 3704.⁹ He died of excessive drinking, which had made him delirious, at the age of seventy-five.

His successors were Lacydes, Evander, and Egesimus, which last was the master of Carneades.¹⁰

SECTION III.—OF THE NEW ACADEMY.

CARNEADES.

CARNEADES of Cyrene instituted the third or new Academy, which, properly speaking, did not differ from the second. For, except some few palliatives, Carneades was as warm and zealous an advocate for uncertainty as Arcesilaus. The difference between them, and the innovation ascribed to him of whom we now speak, consist in his not denying with Arcesilaus, that there are truths; but he maintained that they were compounded with so many obscurities, or rather falsehoods, that it was not in our power to discern with certainty the true from the false.¹¹ He went therefore so far as to admit that there were probable things, and agreed that probability might determine us to act, provided we did not pronounce absolutely upon any thing. Thus he seems to have retained at bottom the whole doctrine of Arcesilaus, but out of policy, and to deprive his opponents of the more specious pretexts for declaiming against, and ridiculing him, he granted degrees of probability, which

ought to determine the wise man to choose this or that in the conduct of civil life. He saw plainly, that without these concessions he should never be able to answer the strongest objections to his principle, nor to prove that it did not reduce man to inaction.

Carneades was the declared antagonist of the Stoics, and applied himself with extreme ardour to refute the works of Chrysippus, who had been for some time the support of the Porch. He so ardently desired to overcome him, that in preparing for the dispute he took hellebore, in order to have his mind the more free, and to give the fire of his imagination the greater force against him.¹²

A maxim of morality, very admirable in a pagan, is ascribed to him.¹³ "If a person knew," says he, "that an enemy, or another whose death would be for his advantage, would come to sit down upon the grass where an asp lurked, it would be acting dishonestly not to give him notice of it, even though his silence might pass with impunity, nobody being capable of making a crime of it." But the conduct of these pagans was always inconsistent with itself in some part or other. This grave philosopher was not ashamed of keeping a concubine in the house with him.

Plutarch has preserved a pretty reflection of Carneades,¹⁴ in his treatise upon the difference between a friend and a flatterer. He had cited the example of one, who, in disputing the prize in the horserace with Alexander, had suffered himself to be beat designedly, for which that prince was very angry with him: he adds, "That the menage is the only thing, in which young princes have nothing to apprehend from flattery. Their other masters frequently enough ascribe good qualities to them, which they have not. But a horse, without regard to rich or poor, to subject or sovereign, throws all the awkward riders that back him."

The embassy of Carneades to Rome is much celebrated: I have spoken of it elsewhere.

To conclude what relates to Carneades, I shall observe that he had not entirely neglected Physics, but that he had made Ethics his principal study. He was extremely laborious, and so avaricious of his time, that he took no care either to pare his nails or cut his hair.¹⁵ Solely devoted to meditation, he not only avoided feasts, but even forgot to eat at his own table, so that his servant, who was also his concubine, was obliged to put meat into his hand, and almost into his mouth. He was extremely afraid of dying.¹⁶ However, upon being informed that his antagonist Antipater, the Stoic philosopher, had poisoned himself, he assumed a short sally of courage against death, and cried out: "Then give me also!" "What?" asked somebody. "Muled wine," replied he, having bethought himself better of it. Diogenes Laertius ridicules this pusillanimity, and reproaches him with having chosen rather to languish long of the phthisis, than to give himself death: for that the pagans thought glorious, though the wisest among them were of a different opinion, "and believed, that nature was the tacit law of God." He died in the fourth year of the 162d Olympiad, A. M. 3871, Ant. J. C. 133, aged eighty-five years.

CLITOMACHUS.

CLITOMACHUS, the disciple of Carneades, was his successor.¹⁷ He was a Carthaginian, and called Asdrubal in the Punic tongue. He composed several books, which were highly esteemed, and of which one was entitled, *Consolation*. He addressed it to his countrymen after the taking and destruction of Carthage, to console them under the state of captivity into which they were fallen.

PHILO. ANTIOCHUS.

PHILO succeeded his master Clitomachus.¹⁸ He taught both philosophy and rhetoric, but at different times. Cicero frequented his school, and improved

from his double lectures. He was also the hearer of Antiochus, Philo's disciple and successor.

ANTIOCHUS was of Ascalon, and is the last of the Academic philosophers mentioned in history. Cicero in his voyage to Athens was charmed with his calm, flowing, graceful manner of speaking;¹ but he did not approve of the change he had introduced in the method of Carneades. For Antiochus, after having long and strenuously maintained the opinions of the new Academy, which rejected entirely the evidence of the senses, and even of reason, and taught that there was nothing certain, had on a sudden embraced those of the old Academy; either from being undeceived by the conviction of reason and the report of his senses; or, as some believed, from jealousy and envy for the disciples of Clitomachus and Philo.

Lucullus,² the famous Roman, as well known for his wonderful taste for the sciences as his great ability in war, had declared openly for the sect of the Academics, not of the new Academy, though then very flourishing from the writings of Carneades which Philo explained, but for that of the old Academy, of which the school was held at that time by Antiochus. He had cultivated the friendship of that philosopher with extreme ardour: he gave him an apartment in his own house, and made use of his assistance in opposing the disciples of Philo, of whom Cicero was the chief.

ARTICLE V. OF THE PERIPATETICS. ARISTOTLE.

I HAVE already observed, that after Plato's death, his disciples divided themselves into two sects: of which the one continued in the school where Plato had taught, and the other removed to the Lycæum, an agreeable place in the suburbs of Athens. Aristotle was the chief and founder of the latter. He was a native of Stagira, a city of Macedonia, and was born in the first year of the 99th Olympiad, A. M. 3620, forty years after Plato.³ His father Nicomachus was a physician, and flourished in the reign of Amyntas king of Macedonia, Philip's father. At the age of seventeen he went to Athens, and entered himself in the school of Plato, under whom he studied twenty years. He was its greatest honour, and Plato used to call him the soul of the school. His passion for study was so great, that in order to prevent sleep from engrossing him, he placed a basin of brass by his bed-side, and when he lay down, extended one of his hands out of bed with an iron ball in it, that the noise made by the falling of the ball into the basin, when he fell asleep might immediately awaken him.

After Plato's death, which happened in the first year of the 108th Olympiad, A. M. 3656, he retired to the house of Hermias tyrant of Atarneus in Mysia, his fellow-pupil, who received him with joy, and loaded him with honours. Hermias having been condemned and put to death by the king of Persia, Aristotle married his sister Pythias, who was left without fortune or protector. It was at this time Philip chose him, to take care of the education of his son Alexander, who might then be about fourteen or fifteen years old. He had long before designed him that important and glorious employment.⁴ As soon as his son came into the world, he informed him of his birth by a letter, which does Philip no less honour than Aristotle, and which I am not afraid to repeat in this place. "You have this," says he, "to inform you, that I have a son. I thank the gods, not so much for having given him to me, as for having given him to me in the time of Aristotle. It is with reason I assure myself, that you will make a successor worthy of us, and a king worthy of Macedonia." Quintilian⁵ says expressly, that Aristotle taught

Alexander the first rudiments of grammar. But as that opinion admits of some difficulty, I do not entirely give into it. When the time for taking upon him the education of that prince arrived, Aristotle repaired to Macedonia. We have seen elsewhere the high value, which Philip and Alexander expressed for his extraordinary merit.

After a residence of some years in that court, he obtained permission to retire. Callisthenes, who had accompanied him thither, took his place, and was appointed to follow Alexander into the field. Aristotle,⁶ in whom profound judgment and a great knowledge of the world were united, upon the point of setting sail for Athens, advised Callisthenes not to forget one maxim of Xenophanes, which he judged absolutely necessary to persons who live in courts: "Speak seldom to the prince, or speak so as to please him: that your silence may either make you more secure, or your discourse more agreeable to him." Callisthenes, who was naturally morose and austere, made but ill use of this counsel, which indeed at bottom savours more of the courtier than the philosopher.

Aristotle, then, not having thought proper to follow his pupil to the war, to which his attachment to study made him very averse, after Alexander's departure returned to Athens. He was received there with all the marks of distinction due to a philosopher that excelled in so many respects. Xenocrates at that time presided in Plato's school in the Academy: Aristotle opened his in the Lycæum. The concourse of his hearers was extraordinary. In the morning his lessons were upon philosophy, and in the afternoon upon rhetoric: he usually gave them when walking, which occasioned his disciples to be called Peripatetics. He taught only philosophy at first: but the great reputation of Isocrates, then ninety years old, who had applied himself solely to rhetoric, and with incredible success, excited his jealousy and induced him also to teach it.⁷ It is perhaps to this noble emulation, allowable between the learned, when confined to imitating, or even surpassing what others have done well, that we owe Aristotle's Rhetoric, the most complete and most esteemed work the ancients have left us upon that subject; unless we choose rather to believe it composed for Alexander.

So shining a merit as Aristotle's did not fail to excite envy, which seldom spares great men. As long as Alexander lived, that conqueror's name suspended the effects of it, and awed the malignity of his enemies. But he was no sooner dead, than they rose up in concert against him, and swore his destruction. Eurymedon, priest of Ceres, lent them his assistance, and served their hatred with a zeal the more to be feared, as it was covered with the mask of religion. He cited Aristotle before the judges, and accused him of impiety, pretending that he taught doctrines contrary to the worship of the gods established at Athens. To prove this, he referred to Aristotle's hymn in honour of Hermias, and the inscription engraved upon his statue in the temple of Delphos. This inscription is still extant in Athenæus and Diogenes Laertius. It consists of four verses, which have no relation to sacred matters, but only to the king of Persia's perfidy to the unfortunate friend of Aristotle: neither is the hymn more criminal. Aristotle might perhaps have offended Eurymedon the priest of Ceres personally by some stroke of ridicule, a much more unpardonable crime than only attacking the gods. However this may be, not believing it safe to wait the event of a trial, he quitted Athens, after having taught there thirteen years. He retired to Chalcis in the island of Eubœa, and pled his cause from that place in writing. Athenæus⁸ repeats some expressions in this apology, but does not warrant them positively to be Aristotle's. Somebody asking

him the cause of his retiring, he answered, "that it was to prevent the Athenians from committing a second murder upon philosophy," alluding to the death of Socrates.¹

It is pretended that he died of grief, because he could not discover the cause of the ebbing and flowing of the Euripus, and that he even threw himself headlong into that sea, saying, "Let the Euripus swallow me, since I cannot comprehend it." There were a multitude of other things in nature beyond his comprehension, and he was too wise to be mortified on that account. Others² affirm, with more probability, that he died of the colic in the 63d year of his age, A. M. 3683, two years after Alexander's death. He was extremely honoured in Stagira, the place of his nativity. It had been demolished by Philip king of Macedonia: but Alexander caused it to be rebuilt at the request of Aristotle.³ The inhabitants in gratitude for that benefit instituted a festival in honour of this philosopher, and when he died at Chalcia in Eubœa, transported his bones to their city, erected an altar upon his monument, gave the place the name of Aristotle, and afterwards held their assemblies in it. He left a son called Nicomachus, and a daughter who was married to a grandson of Demaratus king of Sparta.

I have related elsewhere the fate of his works, during how many years they remained buried and unknown, and in what manner they were at length brought to light and made public.

Quintilian⁴ says, that he does not know which to admire most in Aristotle, his vast and profound erudition, the prodigious number of the writings which he left behind him, the beauty of his style, or the infinite variety of his works. One would believe, says he in another place, that he must have employed several ages in study, for comprehending within the extent of his knowledge all that regards not only philosophy and rhetoric, but even plants and animals, whose nature and properties he studied with infinite application.⁵ Alexander, to second his master's ardour in that learned labour,⁶ and to satisfy his own curiosity, gave orders for making exact inquiries throughout the whole extent of Greece and Asia into all that related to birds, fish, and animals of every kind: an expense which amounted to above eight hundred talents, or eight hundred thousand crowns.⁷ Aristotle composed above fifty volumes, upon this subject, of which only ten remain.

The university of Paris has thought very differently at different times of Aristotle's writings. In the council of Sens held at Paris in 1209, all his books were ordered to be burned, and the reading, writing, or keeping them prohibited. The rigour of this prohibition was afterwards somewhat abated. At length, by a decree of the two cardinals sent by pope Urban V. to Paris, in the year 1366, to regulate the university, all the books of Aristotle were allowed there; and that decree was renewed and confirmed in 1452, by cardinal Etouteville. From that time Aristotle's doctrine always prevailed in the university of Paris, till the happy discoveries of the last age opened the eyes of the learned, and made them embrace a system of philosophy highly different from the ancient opinions of the schools. But as Aristotle was formerly admired beyond due bounds, he is perhaps despised at present more than he deserves.

ARISTOTLE'S SUCCESSORS.

THEOPHRASTUS was of the island of Leboæ. Aristotle, before he returned to Chalcis, appointed him his successor.⁸ Accordingly he filled the place of his master with so much success and reputation, that the number of his hearers amounted to two thousand. Demetrius Phalereus was one of his disciples and intimate friends. The beauty and delicacy of his eloquence, occasioned his being called Theophrastus, which signifies "divine speaker."

Cicero relates a circumstance particular enough of

him.⁹ He was cheapening something of an herb-woman, and was answered by her: "No, Mr. Stranger, you shall have it for no less." He was extremely surprised and even concerned, that after having passed great part of his life at Athens, the language of which he piqued himself upon speaking in perfection, he could however still be discovered for a stranger. But it was his attention itself to the purity of the Attic dialect carried too far, that occasioned his being known for such, as Quintilian observes. What a taste had Athens even down to the meanest of the people!

He did not believe, any more than Aristotle, that it was possible to enjoy any real felicity here with out the goods and conveniences of life: in which says Cicero,¹⁰ he degraded virtue, and deprived her of her highest glory; reducing her to an incapacity of making man happy of herself. He ascribes supreme divinity, in one place, to intelligence, in another to heaven in general, and after that, to the stars in particular.¹¹

He died at the age of eighty-five, exhausted with labour and study. He is said to have murmured against nature at his death, for granting a long life to siags and ravens, who can make no beneficial use of it; whilst she abridged that of man, whom a longer date would enable to attain a perfect knowledge in the sciences:¹² a murmur equally trifling and unjust, and which the light of reason only has taught many of the ancients to condemn, as a kind of rebellion against the divine will. *Quid enim est aliud gigantum more bellare cum diis, nisi naturæ repugnare?*¹³

Strato was of Lampascus.¹⁴ He applied himself very much to physics, and little to ethics, which occasioned his being called the physician. He began to preside in his school in the third year of the 123d Olympiad, A. M. 3718, and taught there eighteen years. He was the master of Ptolemy Philadelphus.

Lycón of Trœa. He governed his school forty years.

Ariston. Critolaus. The latter was one of the three ambassadors sent by the Athenians to Rome in the second year of the 140th Olympiad, A. M. 3781 and the 534th of Rome.

Diodorus. This was one of the last eminent philosophers of the sect of the Peripatetics.

ARTICLE VI.

OF THE SECT OF THE CYNICS.

ANTISTHENES.

THE Cynic philosophers owe their origin and institution to Antisthenes the disciple of Socrates.¹⁵ This sect derives its name from the place where its founder taught, called *Cynosarges*,¹⁶ in the suburb of Athens. If this origin be true, at least, we cannot doubt but their immodesty and impudence might well have confirmed a name given them at first from the place. Antisthenes led a very hard life, and for his whole dress had only a wretched cloak. He had a long beard, a staff in his hand, and a wallet at his back. He reckoned nobility and riches as nothing, and made the supreme good of man consist in virtue. When he was asked of what use philosophy had been to him, he answered, "To enable me to live with myself."

DIOGENES.

DIOGENES was the most celebrated of his disciples.¹⁷

• Ut ego jam non mirer illud Theophrasto accidisse quod dicitur, cum percontaretur ex ancula quadam, quanti aliquid venderet? et respondisset illa, atque addidisset: Hospos, non pote minoris: tulisse eum molestè, se non effugere hospitii speciem, cum etiam ageret Athenis, optimeque loqueretur. *In Brut.* l. 172.

He was of Synope, a city of Paphlagonia. He was expelled thence for counterfeiting the coin. His father who was a banker, was banished for the same crime. Diogenes, upon arriving at Athens, went to Antisthenes, who treated him with great contempt, and would have driven him away with his staff, because he was resolved to have no more disciples. Diogenes was not surprised, and bowing his head, "Strike, strike," said he, "do not be afraid: you'll never find a stick hard enough to make me remove, so long as you speak." Antisthenes, overcome by the obstinacy of Diogenes, permitted him to be his disciple. Diogenes made great improvements from his lessons, and perfectly imitated his manner of living. His whole furniture consisted of a staff, a wallet, and a wooden bowl. Seeing a little boy drink out of the hollow of his hand: "He shows me," says he, "that I have still something superfluous," and broke his bowl. He always went barefoot, without ever wearing sandals, not even when the earth was covered with snow. A tub served him for a lodging, which he rolled before him wherever he went, and had no other habitation. Every body knows what he said to Alexander, who made him a visit at Corinth: and the celebrated saying of that prince, "If I were not Alexander, I would be Diogenes." Juvenal, accordingly, finds the inhabitant of the tub greater and more happy than the conqueror of the universe.¹ The one desired nothing, and the whole world was too little for the other. Seneca therefore is not mistaken, when he says that Alexander, the proudest of mankind, who believed that every thing ought to tremble before him, was forced that day to submit to Diogenes, having found a man in him, from whom he could take, and to whom he could give, nothing.² For the rest we are not to believe, that he was the more humble for his ragged cloak, bag, and tub. He had as much vanity in these things, as Alexander could have from the conquest of the whole earth.³ One day entering Plato's house, which was furnished magnificently enough, he trampled a fine carpet under his feet, saying, "I tread upon the pride of Plato." "Yes," replied the latter, "but with another kind of pride."⁴ He had a supreme contempt for all the human race. Walking at noon with a lighted lantern in his hand, somebody asked him what he sought? "I am seeking a man," replied he. Upon seeing a slave put on a person's shoes: "You'll not be satisfied," says he, "till he wipes your nose for you. Of what use are your hands to you?" Another time seeing the judges carrying a man to be punished for stealing a little vial out of the public treasury: "See," said he, "the great thieves have caught a little one!" The relations of a young man, whom they brought to him to be his disciple, said all the good things of him imaginable: that he was prudent, of good morals, and knew a great deal. Diogenes heard them very calmly: "As he is so accomplished," said he, "he has no occasion for me."

He was accused of speaking and thinking ill of the divinity.⁵ He said that the uninterrupted good fortune of Harpalus, who generally passed for a thief and a robber, was a testimony against the gods.

Among excellent maxims of morality, he held some very pernicious opinions. He regarded chastity and modesty as weakness, and was not afraid to act openly with an impudence contrary to all sense of decency and natural shame. And indeed the character of the Cynics was to overdo every thing in respect to manners, and to render virtue itself hateful if possible, by the excesses and inconsistencies to which they carried it.

Inani sapiens nomen ferat, æquus iniqui.

Ultra, quam satis est, virtutem si petat ipse.

Hor. Ep. vi. l. l.

⁵ De Nat. Deor. iii. n. 83.

More than enough, in virtue's self is bad;

Just's then unjust; the wise man grows the mad.

His historian ascribes to him most persuasive eloquence, of which he relates wonderful effects. Onesicritus had sent one of his sons to Athens. That young man having heard some of Diogenes's lectures, settled in that city.⁶ His elder brother soon after did the same. Onesicritus himself, having had the curiosity to hear that philosopher, became his disciple, such attractions had the eloquence of Diogenes. This Onesicritus was a person of importance. He was in great favour with Alexander, followed him in his wars, in which he had employments of distinction, and composed a history, that contained the beginning of Alexander's life.⁷ Phocion, still more illustrious than he, was also the disciple of Diogenes, as was Stilpon of Megara.

Diogenes in going to the island of Ægina was taken by pirates, who carried him to Crete, where they exposed him to sale. When he was asked by the crier, "What he could do?" he answered, "Command men," and bade him say, "Will any body buy a master?" A Corinthian called Xenades bought him, and carried him to Corinth, where he made him preceptor to his sons. He confided also the whole care of his house to him. Diogenes acquitted himself so well of those employments, that Xenades was incessantly saying every where, "A good genius has taken up his abode in my house." The friends of Diogenes would have ransomed him: "No," said he, "that's foolish. Lions are not the slaves of those that feed them, but those that feed them their servants."⁸ He educated the children of Xenades very well, and acquired their affection to a great degree. He grew old in this house, and some say he died there.

He ordered at his death that his body should be left upon the earth without interment.⁹ "How!" said his friends, "would you lie exposed to the birds and beasts?" "No," replied he, "put my stick by me, that I may drive them away." "And how will you do that," said they, "when you have no sense?" "What then does it signify," answered the Cynic, "whether I am eaten or not by the birds and beasts, as I shall have no sense of it?"

No regard was had to the great indifference of Diogenes about interment. He was buried magnificently near the gate next the Isthmus. A column was erected near his tomb, on which a dog of Parian marble was placed.

He died at nearly ninety years of age, according to some upon the same day as Alexander, but others make him survive that prince some years.

CRATES.

CRATES the Cynic was one of the principal disciples of Diogenes.¹⁰ He was a Theban of a very considerable family, and of great fortune. He sold his whole patrimony for more than two hundred talents,¹¹ which he put into the hands of a banker, and desired him to give them to his children in case they proved fools; but if they had elevation of mind enough to be philosophers, he directed him to distribute the money among the citizens of Thebes, because philosophers wanted nothing: always excess and caprice even in actions laudable in themselves.

Hipparchia, the sister of the orator Metrocles, charmed with the freedom of Crates's manners, was absolutely determined to marry him, notwithstanding the opposition of all her relations. Crates, to whom they applied themselves, did all he could on his side to make her disgust this marriage. Having stripped himself before her to show her his hunch-back and ill made body in the worst light, and throwing his cloak, bag, and staff, upon the ground; "There," says he, "are all my riches, and my wife must expect no other jointure from me." She persisted in her resolution, married hunch-back, dressed herself like a Cynic, and became still more "free" and impudent than her husband.

¹¹ Two hundred thousand crowns.

Impudence was the prevailing character of these philosophers. They reproached others with their faults without any reserve, and added an air of insolence and contempt to their reproaches. This, according to some, occasioned their being called Cynics, because they were biting, and barked at all the world like dogs; and because they were ashamed of nothing, and held that every thing might be done openly without shame or reserve.

Crates flourished at Thebes about the 113th Olympiad, A. M. 3676, and excelled all the Cynics of his time. He was the master of Zeno, the founder of the famous sect of the Stoics.

ARTICLE VII.—OF THE STOICS.

ZENO.

ZENO was of Citium in the island of Cyprus.¹ On his return from buying purple in Phœnicia, for he applied himself first to commerce, he was cast away in the port of Pyraus. He was much afflicted with his loss, and removed to Athens, where he went into a bookseller's shop, and took up a book of Xenophon's, the reading of which gave him infinite pleasure, and made him forget his misfortune. He asked the bookseller, where that sort of people, of whom Xenophon spoke, were to be found. Crates the Cynic happened to pass by at that instant. The bookseller pointed him out to Zeno, and advised him to follow him. From that day he commenced his discipline; at which time he was thirty years of age, A. M. 3672. The morality of the Cynics highly pleased him; but he could not relish their immodesty and impudence.

After having studied ten years under Crates, and passed ten more in the houses of Stilpon of Mægara, Xenocrates, and Polemon, he instituted a new sect at Athens, A. M. 3692. His reputation immediately spread throughout Greece. In a short time he became the most distinguished philosopher in the country. As he usually taught in a porch, his followers were called *Stoics*, from the Greek word *στωά*, which signifies a porch or portico.

Zeno lived to the age of ninety-eight, without ever experiencing any disorder of body.² He taught forty-eight years successively, and lived sixty-eight from his first applying to philosophy under Crates the Cynic. Eusebius dates his death, which was much regretted, at the 129th Olympiad, A. M. 3743. When Antigonus king of Macedonia received news of it, he was sensibly afflicted. The Athenians caused a tomb to be erected for him in the suburb of Ceramica, and by a public decree, (wherein he was praised as a philosopher who had perpetually excited the youth under his discipline to virtue, and who had always led a life conformable to the precepts he taught) they gave him a crown of gold, and caused extraordinary honours to be paid to his memory: "In order," says the decree, "that all the world may know, that the Athenians are studious to honour persons of distinguished merit, both during their lives and after their deaths." Nothing does a people more honour than such noble and generous sentiments, which arise from a high esteem for knowledge and virtue. I have already observed elsewhere that a neighbouring nation, I mean England, distinguishes itself by its esteem for great men of this kind, and by the gratitude it expresses for those who have exalted the glory of their country.

LEUCIPPUS.

LEUCIPPUS is one of the most famous of Zeno's disciples. Authors do not agree about the place of his birth. He is believed to be the inventor of the atomical system. Posidonius ascribes it to one Moschus of Phœnicia, who, according to Strabo,³ lived before the Trojan war: but the most learned persons give Leucippus the honour of it. Epicurus is blamed for not owning his improvement from the inventions of this philosopher, and reproached with having only

reformed the system of Democritus in some places, of which Leucippus was the first author.⁴

CLEANTHES.

CLEANTHES was of Assos in Troas.⁵ He was worth but four drachmas, or thirty pence, when he came to Athens. He recommended himself highly by the courageous patience, with which he supported the hardest and most painful labours. He passed almost the whole night in drawing water for a gardener, in order to gain subsistence, and to enable himself during the day to apply to the study of philosophy. Being cited before the judges of the Areopagus, to give an account, according to one of Solon's laws, how he lived, he produced the gardener as an evidence, and without doubt his own hands, hard and callous with labour. The judges, in a transport of admiration, ordered him ten minæ, about thirty pounds, out of the public treasury. Zeno forbade him to accept of them, so much was poverty in honour with these philosophers! He filled the chair of the Porch with great reputation.

His genius was naturally heavy and slow; but he overcame that defect by tenacious application to study. Eloquence was not his talent. He, however, thought fit to compose a Rhetoric, as well as Chrysippus, of whom we shall soon speak; but both with such bad success, that, if we may believe Cicero, who certainly was a good judge in this case, those works were fitter to make a man mute than a speaker.⁶

CHRYSIPPUS.

CHRYSIPPUS was of Soli a city of Cilicia.⁷ His genius was very subtle, and proper for logical disputations, in which he exercised himself much, and upon which he wrote many tracts. Diogenes Laertius makes them amount to above three hundred. It is said that the occasion of his writing so much, was his envy of Epicurus, who had composed more books than any other philosopher: but he never came up to that rival. His works were little laboured, and by necessary consequence incorrect, full of tedious repetitions, and often even contradictions. It was the common fault of the Stoics, to introduce much subtlety and dryness into their disputations either by word of mouth or in writing. They seem as carefully to have avoided all beauty of style, as depravity of morals. Cicero did not blame them much for wanting a talent entirely foreign to their profession, and not absolutely necessary to it.⁸ "If a philosopher," says he, "have eloquence, I do not like him the worse for it; if not, I make it no crime in him."⁹

He was satisfied if they were clear and intelligible; for which he valued Epicurus.¹⁰ Quintilian often cites with praise a work written by Chrysippus upon the education of children.

He associated himself for some time with the Academics,¹¹ maintaining after their manner both sides of a question. The Stoics complained, that Chrysippus had collected so many and so strong arguments for the system of the Academics, that he could not afterwards refute them himself, which had supplied Carneades their antagonist with arms against them.

His doctrine, in many points, did no honour to his sect, and could only disgrace it.¹² He believed the gods perishable, and maintained that they would actually perish in the general conflagration. He allowed the most notorious and most abominable incests; and admitted the community of wives among

sages. He composed several writings full of the most horrid obscenities. Such was the philosopher, who passed for the most solid support of the Porch, that is to say, of the most severe sect of the Pagan world. It must appear astonishing after this, that Seneca² should praise this philosopher, whom he joins with Zeno, in the most magnificent terms. He goes so far as, to say of both the one and the other, that they had done greater things in their closets, than if they had commanded armies, filled the first offices of a state, and instituted wise laws; and he adds, that he considers them, not as the legislators of a single city, but of all mankind.

Chrysippus died in the 143d Olympiad, A. M. 3793. A tomb was erected for him among those of the most illustrious Athenians. His statue was to be seen in the suburb of Ceranica.

DIODEGENES THE BABYLONIAN.

DIODEGENES the Babylonian was so called, because his country, Seleucia, was in the neighbourhood of Babylon. He was one of the three philosophers deputed by Athens to the Romans. He showed great moderation and tranquillity of soul upon an occasion capable of moving the calumet and most patient of men. He was expatiating upon anger.³ A young man of great impudence and presumption spilt in his face, probably to try whether he practised himself the doctrine he taught others. The philosopher, without seeming moved, or raising his voice, said coldly; "I am not angry; but I doubt whether I ought not to be so." Did such a doubt suit the apathy of a Stoic?⁴

ANTIPATER.

ANTIPATER was of Sidon. He is often mentioned in the fourth book of Academical Questions as one of the most learned and esteemed of the Stoics. He was the disciple of Diogenes the Babylonian, and Posidonius was his.

PANÆTIUS.

PANÆTIUS was, without contradiction, one of the most famous philosophers of the Stoic sect. He was a Rhodian, and his ancestors had commanded the armies of that state.⁵ We may date his birth about the middle of the 148th Olympiad, A. M. 3814. He perfectly answered the peculiar care that had been taken of his education, and devoted himself wholly to the study of philosophy. Inclination, perhaps prejudice, determined him in favour of the Stoic sect, at that time in the highest credit. Antipater of Tarsus was his master. He heard him as a man that understood the rights of reason;⁶ and notwithstanding the blind deference, with which the Stoics received the decisions of the founders of the Porch, Panætius abandoned those without scruple, which did not appear sufficiently established.

To satisfy the desire of knowledge, which was his darling passion, he quitted Rhodes, without regard to the advantages for which the greatness of his birth seemed to design him. The most distinguished persons in every kind of literature usually assembled at Athens, and the Stoics had a famous school there. Panætius frequented it with assiduity, and at length supported its reputation with dignity. The Athenians resolved to make him their own, and offered him the freedom of their city; for which he returned them his thanks.⁷ "A modest man," said he to them in respect to Proclus, "ought to content himself with one country;" in which he imitated Zeno, who, lest it might be injurious to his own citizens, would not accept the same favour.

The fame of Panætius soon extended itself beyond the seas. The sciences had for some time made considerable progress at Rome. The great cultivated them in emulation of each other, and those whom their birth or capacity had placed at the head of the public affairs, made it their honour to protect them to the utmost. Such was the state of things when Panætius came to Rome. He was ardently desired there. The young nobility flew to hear him; and the Scipios and the Lælii were of the number of his disciples. A tender friendship united them from that time, and Panætius, as many writers inform us, attended Scipio in his several expeditions. To make him amends, that illustrious Roman, on a signal occasion, gave him the most grateful marks of his confidence. Panætius was the only one upon whom he cast his eyes, when the senate appointed him ambassador to the nations and kings of the east in alliance with the commonwealth.⁸ The credit of Panætius with Scipio was not useless to the Rhodians, and was often employed for them with success.⁹

The year of his death is not precisely known. Cicero tells us, that Panætius lived thirty years after having published his treatise upon the duties of man, which Cicero has diffused into his; but it is not known at what time that treatise appeared. It is probable that he published it in the flower of his age. The value Cicero set on it, and the use he made of it, are good proofs of the excellency of this work, of which we therefore should regret the loss. He composed many others. The reader may see an account of them in the memoir of the Abbé Sevin upon the life of Panætius,¹⁰ from which I have extracted all I have said of them in this place.

To the praise of the Stoics it must be confessed that less intent than other philosophers upon frivolous and often dangerous speculations, they devoted their studies to the clearing up of those great principles of morality, which are the firmest supports of society; but the dryness and stiffness that prevailed¹¹ in their writings, as well as in their manners, disgusted most of their readers, and greatly lessened their utility. The example of Cleanthes and Chrysippus, the founders of the Porch, did not mislead Panætius. Attentive to the good of the public, and aware that the useful generally is not current without the agreeable, he united solidity of argument with beauty and elegance of style, and diffused into his works all the graces and ornaments of which they were susceptible.

POSIDONIUS.

POSIDONIUS was of Apamea in Syria, but he passed the greater part of his life at Rhodes, where he taught philosophy with much reputation, and was employed in the affairs of the public with the same success. Pompey, on his return from his expedition against Mithridates, touched at Rhodes in order to see him. He found him sick. We shall see in the sequel, in what manner this visit passed.

EPICETUS.

I SHOULD injure the sect of the Stoics, if in the number of its followers I omitted Epicetetus, the man perhaps of all these philosophers, who did it most honour by the sublimity of his sentiments, and the regularity of his life.

EPICETUS was born at Hierapolis, a city of Phrygia near Laodicea. The meanness of his extraction has prevented us from the knowledge of his parents. He was the slave of one Epaphroditus, whom Suidas calls "one of Nero's guards;" whence he took his name Epicetetus, which signifies *bought servant* or *slave*. It is neither said by what accident he was brought to Rome, nor how he came to be sold to

¹⁰ Stoici horridiores evadunt, asperiores, duriores et oratione et moribus. Quam illorum tristitiam atque asperitatem fugiens Panætius, nec asperitatem sententiarum, nec discrederet spinas probavit: fuitque in altero genere mitior, in altero illustrior. *De Finib.* l. iv. n. 78, 79.

Epaphroditus. It is only known that he was the latter's slave. Epictetus was apparently made free. He always was a follower of the Stoic philosophy, which was at that time the most perfect and the most severe sect. He lived at Rome till the edict of Domitian, A. D. 96, by which all philosophers were banished from thence. If we may believe Quintilian,¹ many of them concealed great vices under so fair a name, and had acquired the reputation of philosophers, not by their virtue and knowledge, but by a grave and severe countenance, and a singularity of dress and behaviour, which served as a mask for very corrupt manners. Quintilian is perhaps a little excessive in this description, with the view of pleasing the emperor: but it is certain, that it could in no manner be applied to Epictetus. Upon quitting Rome, he went to settle at Nicopolis, a considerable city of Epirus, where he lived many years, always in great poverty, but highly honoured and esteemed. He returned afterwards to Rome in the reign of Adrian, with whom he was in great consideration. Neither the time, place, nor any other circumstances of his death are mentioned: he died at a sufficiently great age.

He confined all his philosophy to suffering ills patiently, and moderation of pleasure, which he expressed by the two Greek words, *ὑπομένει καὶ ἀνίσταται*, *sustine et abstine*. Celsus,² who wrote against the Christians, says, that upon his master's bending his leg with great violence, he told him without emotion, and in a laughing manner: "Why, you 'll break my leg." And as it happened so, he continued in the same tone: "Did not I tell you, that you'd break it?"

Lucian³ ridicules a man, who bought Epictetus's lamp at a great price,⁴ though only an earthen one; as if he had imagined that by using it he should become as wise as that admirable and venerable old man.

Epictetus had composed many works, of which only his *Enchiridion* or *Manuel* remain. But Arrian, his disciple, has written a great work, which, as he pretends, consists solely of what he had heard him say, and which he had collected as near as possible, in his own terms. Of the eight books which formed this work, we have only four.

Stobæus has preserved us some sentences of this philosopher's, which had escaped the diligence of his disciple. I shall cite only two of them in this place. "To be rich does not depend on thee, but to be happy does. Riches themselves are not always a good, and certainly are always of short duration; but the happiness derived from wisdom, endures for ever." "When thou seest a viper or a serpent in a box of gold, dost thou esteem it the more, and hast thou not always the same horror for it on account of its venomous nature? Have the same for the wicked man, when thou seest him surrounded with splendour and riches." "The sun does not stay to be implored to impart his light and heat. By his example do all the good thou canst, without staying till it be asked of thee."

The following prayer Epictetus desired to make at his death, which I take from Arrian. "O Lord, have I violated your commandments? Have I abused the gifts you have conferred upon me? Have I not submitted my senses, wishes, and opinions, to you? Have I ever complained of you? Have I accused your providence? I have been sick, because it was your will; and it was also mine. It was your will that I should be poor, and I was contented with poverty. I have been of the meanest of the people, because it was your will; and did I ever desire to be otherwise? Was I ever afflicted for my condition? Have you ever surprised me murmuring and dejected? I am still entirely ready to undergo whatever you shall please to ordain for me. The least sign from you is an inviolable order for me. It is your will that I should quit this magnificent scene: I go, with a thousand most humble thanks, that you have vouchsafed to admit me to see your works, and to display to

my eyes the admirable order, with which you govern this universe." Though it be easy to observe in this prayer several strokes borrowed from Christianity which at that time began to cast a great light, we however, perceive in it a man well satisfied with himself, and who, by his frequent interrogations, seems to defy the Divinity himself to find any fault in him. A sentiment and prayer truly worthy of a Stoic, all proud of his pretended virtue! St. Paul, who abounded so much in good works, did not speak such language "I judge not mine own self," said he. "For I know nothing by myself," (or as the French expresses it better, "though my conscience reproaches me with nothing,") "yet am I not hereby justified: but he that judgeth me is the lord."⁵ For the rest, this prayer all defective as it is, will condemn many Christians. For it shows us, that a perfect obedience, an entire devotion, and total resignation to the will of God, were considered by the pagans themselves, as the indispensable duties of creatures to him from whom they hold their being. This philosopher knew the terms of duties and virtues; but had the misfortune to be ignorant of the principle of them.

Epictetus was at Rome at the time when St. Paul made so many conversions there, and when Christianity almost at its birth shone out with so much lustre in the unexampled constancy of the faithful. But far from improving from so radiant a light, he blasphemed against the faith of the primitive Christians, and the heroic courage of the martyrs. In the fourth chapter of the seventh book of Arrian, after having shown, that a man conscious of his liberty, and convinced that nothing can hurt him, because he has God for his deliverer, fears neither the guards nor swords of tyrants Epictetus adds: "Frenzy and custom have been capable of inducing some to despise them, as the Galileans;⁶ and shall not reason and demonstration produce the same effect?" Nothing was more contrary to the doctrine of the gospel than the pride of the Stoics.

CHAPTER III.

HISTORY OF THE PHILOSOPHERS OF THE ITALIC SECT.

I HAVE already said, that the Italic sect was so called, because it was instituted by Pythagoras in that part of Italy called Græcia Magna.

I shall divide this chapter into two articles. In the first I shall relate the life of Pythagoras, and that of Empedocles the most famous of his disciples. In the second I shall treat the division of the Italic into four other sects.

ARTICLE I.

PYTHAGORAS.

THE most common opinion is that Pythagoras was of Samos, and son of Mnesarchus the sculptor.⁷ He was at first the disciple of Pherecides, who is ranked in the number of the seven sages. After the death of his master, as he had an extraordinary desire of learning and of knowing the manners of strangers, he abandoned his country, and all he had, for the sake of travelling. He remained a considerable time in Egypt, to converse there with the priests, and to learn from them whatever was most occult in the mysteries of their religion and learning. Polycrates wrote in his favour to Amasis king of Egypt, in order that he might treat him with distinction, A. M. 3440, Ant. J. C. 564. Pythagoras went afterwards into the country of the Chaldeans, to acquire the learning of the Magi. Some imagine that he might have seen Ezekiel and Daniel, and have improved from their lessons at Babylon. After having travelled into different parts of the East, he went to Crete, where he contracted a great intimacy with the wise Epimenides. And at last, after having enriched himself with various knowledge in the several countries where he had been, he returned to Samos, laden with the precious spoils which had been the motives, and were the fruits of his travels. His grief to see his country oppressed by the tyranny of

⁷ So the Christians were called.

Polycrates, made him resolve on voluntary banishment. He went into that part of Italy which was called Great Greece, and settled at Crotona in the house of Milo, the famous boxer, where he taught philosophy. It is from this place that the sect of which he was author, was called the Italic sect.

Before him, as I have observed already, those who excelled in the knowledge of nature, and had acquired reputation by a virtuous and regular life, were called *sages*.¹ That name appearing too proud to him, he assumed another, which implied, that he did not ascribe the profession of wisdom to himself, but only the desire of possessing it. This was *Philosopher*, that is to say, lover of wisdom.

The reputation of Pythagoras soon spread over all Italy, and brought a great number of disciples to hear him. Some make Numa of this number, who was elected king of Rome: but they mistake. Pythagoras flourished in the time of Tarquin, the last king of the Romans, that is, in the 220th year of Rome; or, according to Livy, in the reign of Servius Tullius,² A. M. 3472. The error³ of those who make him king Numa's contemporary is glorious for them both. For they had not fallen into it, if they had not believed that Numa could not have shown so much ability and wisdom in his government, if he had not been the disciple of Pythagoras. Certain it is that his reputation afterwards became very great at Rome. The Romans must have conceived a very high idea of him, as upon being commanded by an oracle during the war with the Samnites to erect two statues, the one to the bravest, and the other to the wisest, of the Greeks, they set up those of Alcibiades and Pythagoras.⁴ Pliny was much surprised that they chose either of them.

He made his scholars undergo a severe noviciate of silence for at least two years: and extended it to five with those in whom he discerned a too great itch for talking.⁵ His disciples were divided into two classes.⁶ The one were simple hearers, *ἀκουστικοί*, hearkening to and receiving what was taught them, without demanding the reasons of it, of which it was supposed they were not yet capable. The others, as more formed and intelligent, were admitted to propose their difficulties, *ὑποφωτιστικοί*, to penetrate deeper into the principles of philosophy, and to learn the reasons of all that was taught them.

Pythagoras considered geometry and arithmetic, as absolutely necessary to enlarge the minds of young people, and to prepare them for the study of great truths. He also set great value upon, and made great use of, music, to which he referred every thing;⁷ pretending that the world was formed by a kind of harmony imitated afterwards by the lyre; and he annexed peculiar sounds to the motion of the celestial spheres which revolve over our heads. It is said that it was the custom of the Pythagoreans on rising from bed, to awaken the mind with the sound of the lyre, in order to make themselves more fit for action: and before going to bed, they resumed their lyre, which no doubt they touched to a softer strain, in order to prepare themselves for sleep, by calming whatever might remain of the tumultuous thoughts of the day.

Pythagoras had a great influence over the minds of his scholars. His having advanced any thing sufficed for them to be convinced of it without farther

proof: whence came the famous saying *ἄντις ἰσὺς ἵππε δίδωσι*, he (the master) has said it. A reprimand which he gave one of his scholars in the presence of all the rest, so sensibly affected him, that he could not survive it, and killed himself.⁸ From that period Pythagoras, instructed and afflicted by so mournful an example, never rebuked any body except in private.

His doctrine, and still more his example, produced a wonderful change in Italy, and especially at Crotona, where he principally resided. Justin⁹ describes at large the reformation, which he introduced into that city. "He came," says he, "to Crotona, and having found the inhabitants in general abandoned to luxury and debauchery, he conciliated them at length by his authority to the rules of a prudent frugality. He continually praised virtue, and inculcated its beauty and advantages. He represented in the most lively terms the shame of intemperance, and enumerated the states which had been ruined in consequence of vicious excesses. His discourse made such an impression on the people, and occasioned so general a change in the city, that it seemed a quite different place, and retained no marks of the ancient Crotona. He spoke to the women separately from the men, and the children from their fathers and mothers. To the wives he recommended the virtues of their sex, chastity, and submission to their husbands; to the youth, profound respect for their fathers and mothers, and a taste for study and the sciences.¹⁰ He insisted principally upon frugality, the mother of all virtues; and prevailed upon the ladies to renounce the fine clothes, and rich ornaments, which they thought essential to their rank, but which he considered as the food of luxury and vice. These they sacrificed to the principal divinity of the place, which was Juno; showing by so generous a conduct that they were entirely convinced, that the true ornament of ladies was unspotted virtue, and not magnificence of dress. The reformation which the warm exhortations of Pythagoras produced among the youth, may be judged," adds the historian, "from their success with the ladies, who generally adhere to their ornaments and jewels, with almost invincible passion. 'In juventute quoque quantum profugatum sit, victi feminarum contumaces animi manifestant.' This last reflection, which naturally enough expresses the character of the ladies, is not made only by Justin. St. Jerome also observes, 'that the sex are naturally fond of ornaments.'¹¹ 'We know ladies,' says he, "of distinguished chastity, who love to adorn their persons, not for the sake of pleasing any man, but to please themselves." And he adds elsewhere,¹² that some of them carry their taste to an excess which knows no bounds, and will hearken to no reason: 'Ad quæ ardent et insanient studia matronarum.'

The zeal of Pythagoras was not confined to his school, and the instruction of private persons, but even penetrated into the palaces of the great. That philosopher knew, that to inspire princes and magistrates with the principles of honour, probity, justice, and love of public good, was labouring for the happiness and reformation of whole nations. He had the glory of forming disciples, who proved excellent legislators:¹³ Zaleucus, Charondas, and many others, whose wise laws were so useful to Sicily, and that part of Italy called Great Greece, and who have a juster title to the highest commendation than those

famed conquerors who have made themselves known to the world only by ravages, fire, and sword. He took great pains to put an end to wars in Italy, and to calm the intestine factions which disturbed the tranquillity of states. War, said he, should be made only against these five things: diseases of the body, ignorance of the mind, passions of the heart, seditions of cities, and discord of families. These five enemies he is for combating with the utmost ardour and perseverance.

The inhabitants of Crotona thought proper, that their senate, which consisted of a thousand persons, should act in all things by the advice of so great a man, and determine nothing but in concert with him: such credit had his prudence and zeal for the public good acquired him.¹ Crotona was not the only city that had the benefit of his counsels: many others experienced the good effects of this philosopher's studies.² He went from one to another to diffuse his instructions with greater fruit and abundance, and he left behind him, in all places where he continued any time, the precious traces of his residence in the good order, discipline, and wise regulations which he established in them.

His maxims of morality were admirable, and he was for having the study of philosophy tend solely to the rendering men like God. Hierocles³ gives this praise to a piece of poetry, entitled *Carmen aureum*, (golden verses,) which contain this philosopher's maxims. But his notions of the nature of God were very imperfect.⁴ He believed that God is a soul diffused into all the beings of nature, and from which human souls are derived: an opinion which Virgil, in the fourth book of the *Georgics*, has expressed in fine verses.⁵ Velleius, in Cicero, refutes this opinion in an agreeable but solid manner. "If this were so," says he, "God would be divided and torn to pieces, when these souls were taken from his substance. He would suffer, and a God is not capable of suffering, in a part of himself, whenever they suffer, as frequently happens. Besides, how comes it that the mind of man should be ignorant of any thing, if it were God?"⁶

The Metempsychosis, or transmigration of souls, was the principal maxim of Pythagoras's philosophy.⁷ He had borrowed it either from the Egyptians, or the Brahmins, those ancient sages of India. This opinion subsists still among the idolaters of India and China, and is the fundamental principle of their religion. According to it, Pythagoras believed, that the souls of men at their death passed into other bodies, and if they had been wicked, that they were confined in unclean and miserable beasts, to expiate the faults of their past lives; and that after a certain revolution of years or ages, they returned to animate other men.

This philosopher boasted, in this respect, of a privilege entirely singular: for he said⁸ he remembered in what bodies he had been before he was Pythagoras. But he went no farther back than the siege of Troy. He had first been *Ethalides*, the supposed son of Mercury, and having had permission to ask whatever he pleased of that god, except immortality, he desired that he might remember all things even after death. Some time after he was Euphorbus, and received a mortal wound from Menelaus at the

siege of Troy. His soul passed afterwards into *Hermotimus*, at which time he entered the temple of Apollo in the country of the Branchidae, where he saw his buckler eaten up with rust, which Menelaus on his return from Troy had consecrated to that god in token of his victory. He was afterwards a fisherman of Delos, named *Pyrrhus*; and lastly, *Pythagoras*. He affirmed, that in a voyage which he had made to hell, he had seen the soul of the poet *Hesiod* fastened with chains to a pillar of brass, and suffering great torments. That as for that of *Homer*, he had seen it hanging on a tree, surrounded with serpents, upon account of the many falsehoods he had invented and ascribed to the gods; and that the souls of the husbands, who had lived amiss with their wives, were severely tormented in that region.

To give more weight and credit to these fabulous tales, he had made use of industry and artifice. Upon arriving in Italy, he shut himself up in a subterraneous place, after having desired his mother to keep an exact journal of all that should pass. When he had continued there as long as he judged proper, his mother, as they had agreed before, gave him her notes, wherein he found the dates and other circumstances of events. He quitted this place with a visage pale and wan. In an assembly of the people he assured them, that he was just returned from hell; and to convince them of what he said, he began with relating all that had passed during his absence. All the hearers were moved and surprised with that account, and nobody doubted but that there was something divine in Pythagoras. Fears and cries ensued on all sides. The people of Crotona conceived an extraordinary esteem for him, received his lessons with great eagerness, and begged of him that he would vouchsafe to instruct their wives also.

There must have been a very blind credulity, or rather gross stupidity among the people, to have believed such wild chimeras, which often even contradicted themselves. For it does not seem very easy to reconcile the transmigration of souls into different bodies with the pains Pythagoras supposed, that the souls of the wicked suffered in hell; and still less with his doctrine upon the nature of souls. For, as the learned translator of Cicero's books upon the nature of the gods observes, the souls of men, and those of beasts, according to Pythagoras, are of the same substance; that is to say, a particle of that universal Soul, which is God himself.⁹ When therefore it is said, that the soul of Sardanapalus, as a punishment for his excesses, passes into the body of a hog, it is precisely the same thing as to say, God modifies himself into a hog, in order to punish himself for not having been wise and temperate, while he was modified in Sardanapalus. Lactantius¹⁰ has reason for treating Pythagoras as an old dotard, and for saying, he must have thought that he had talked to infants and not to men, to vent such absurd fables and old women's stories to them with a grave and serious air.

Empedocles his disciple rose upon his master's ravings, and composed a genealogy of his soul still more extravagant and various; for according to Athenaeus,¹¹ he gave out, that he had been a girl, a boy, a shrub, a bird, and a fish, before he was Empedocles.

But how could so great a philosopher as Pythagoras, and one so valuable for many excellent qualities, conceive so strange a system? How could he draw so great a number of followers after him while he advanced opinions capable of shocking every man of common sense? How happens it, that whole nations, in other respects not void of knowledge, and civilized, have retained this doctrine down to our days?

It is most certain that Pythagoras, and all the ancient philosophers, when they began to philosophize, found "the doctrine of the immortality of the soul" generally received by all nations; and it was upon

¹⁰ Athen. l. viii. p. 363

that principle Pythagoras, as well as the rest, founded his system. But when the question was to fix what became of that soul after its brief office of animating a human body, Pythagoras, and all the philosophers with him, were at a loss and in confusion, without being able to resolve upon any thing capable of satisfying a rational mind. They could not reconcile themselves to the Elysian fields for the virtuous, nor Styx for the wicked, mere fictions of the poets. Those amusements for the souls of the blessed seemed very insipid to them; and could they be believed to exist without end, and to endure throughout all eternity? But the souls of those, who had done neither good nor harm, as of infants, what became of them? What was to be their lot, their condition? What were they to do to all eternity? To extricate themselves from this very difficult objection, some philosophers destined the souls of the wise and ingenious to the contemplation of the course of the stars, the harmony of the spheres, the origin of winds, storms, and other meteors, as Seneca and some other philosophers teach. But the generality of the world could have no part in the learned and speculative joys of this philosophical paradise. What occupation, then, were they to have throughout futurity? They perceived, that it did not consist with so wise a being as God, to create beings purely spiritual every day, only to animate bodies for some short space, and to have no other employment during the rest of eternal duration. Why create so many souls of infants, that die in their births, and at their mothers' breasts, without ever being able to make the least use of their reason? Does it consist with the wisdom of God to produce so many thousands of new souls every day, and to continue creating them every day throughout all eternity, without either use or purpose? What is to be done with those infinite millions of useless inactive souls? What could be the end of forming those incessantly increasing numbers of spirits without either function or end? These were insurmountable difficulties to all the sects of the philosophers. In the impossibility of getting over them, some went so far as to doubt and even deny the immortality of the soul. Others, who could not resolve to renounce a maxim which God has impressed too deeply on the heart of man for him to be able to disown it, found themselves reduced to make them pass from one body into another: and as they could not conceive eternal punishments, they believed that they sufficiently punished the wicked, in confining them within the bodies of beasts. And thence they fell into all the absurdities, with which they are justly reproached. But the other sects scarce defended themselves better from the absurdities to which their different systems gave birth.

But to return to Pythagoras. In necessary consequence of the Metempsychosis, he concluded, and one of the capital points of his moral doctrine was, that man committed a great crime, when he killed and ate animals; because all animals, of whatsoever kind they are, being animated with the same soul, it was a horrid cruelty to cut the throat of another self. This is what Ovid,¹ where he feigns that Pythagoras instructs king Numa in his maxims, wittily describes after his manner in these three verses:

Hec! quantum scelus est in viscera condì,
Conjestoque avidum pinguescere corpore Corpus,
Alteriusque animantem animantem vivere letho.

But, observes again with ingenuity, the translator already cited, what would Pythagoras have answered to a man who should have asked him conformably to his own principles: "What injury do I do a fowl in killing it? I only make it change its form, and it is much more likely to gain than lose by that change. Perhaps that soul immediately after quitting its body, will go to animate some embryo, who will one day be a great monarch or philosopher; and instead of seeing itself confined to a fowl, which uncharitable men leave in a yard to suffer the injuries of the weather, and a thousand other inconveniences, it

will find itself seated in an assemblage of corpuses, that forming the body, sometimes of an epicure, sometimes of a Cæsar, will glut itself with pleasures and honours."

The same philosopher forbade his disciples to eat beans; whence Horace² calls them the relations or allies of Pythagoras: *fabæ Pythagoræ cognatæ*. Different reasons are given for this prohibition; among others, that beans by the great wind they occasion, excite vapours very contrary to the tranquillity of soul necessary to those, who devote themselves to inquiring after truth.³

I shall never have done, if I undertook to relate circumstantially all the wonders ascribed to Pythagoras. If we may believe Porphyry, that declared enemy of Christianity, and Iamblichus his disciple, (for they are the worthy authorities for all these miracles) Pythagoras made even the beasts understand and obey him. He commanded a bear that made great ravages in Daunia to be gone, and it disappeared. He forbade an ox, after having whispered a word in his ear, to eat beans: and never more did he touch bean. It is affirmed that he had been seen and heard at the same time disputing in the public assemblies of two cities very remote from each other; the one in Italy, and the other in Sicily. He foretold earthquakes, appressed tempests, expelled pestilence, and cured diseases. His golden thigh ought not to be omitted. He showed it to his disciple Abaris, the priest of Apollo Hyperboreus, to prove to him that he himself was that Apollo; and he had also shown it, says Iamblichus, in a public assembly at Crotona. What wonders does not the same Iamblichus relate of this Abaris? Borne upon a dart as upon a Pegasus, he could pass a great way through the air in a short time, without being stopped or retarded in his course by rivers, seas, or places inaccessible to other men. Would one believe, that the miracles and cures ascribed to Pythagoras could be quoted on the testimony of such authors, as things of a real nature? *Credat Judeus Appella*. People of sense, even among the pagans, openly laughed at them.

It is time to make an end of his history. The circumstances of his death, which I shall not enter into particularly, are very differently related. Justin⁴ observes, that he died at Metapontum, whither he had retired after having continued twenty years at Crotona; and that the people's admiration of him rose so high, that they converted his house into a temple, and honoured him as a god. He lived to a very advanced age.

EMPEDOCLES.

EMPEDOCLES, a Pythagorean philosopher, was of Agrigentum, a city of Sicily. He flourished in the 84th Olympiad, A. M. 3560. He travelled much, as was the custom of these times, in order to enrich his mind with curious knowledge. On his return into his country, he frequented the schools of the Pythagoreans. Some make him Pythagoras's disciple; but he is believed to have lived many years after him. He applied himself not only to composing works, but reforming the manners of his country;⁵ and Empedocles spared no pains to do at Agrigentum what Pythagoras had done at Crotona. The city of Agrigentum was abandoned to luxury and debauchery. Its inhabitants, according to Diogenes Laertius, amounted to eight hundred thousand: which is to be understood of its territory as well as city. I have mentioned its power and riches elsewhere. Empedocles used to say that the people of Agrigentum abandoned themselves to feast and pleasure, as if they believed they were to die to-morrow; and applied themselves in building, as if they thought they were never to die. Nothing shows the luxury and effeminacy of the Agrigentines better, than the order

¹ Satyr. G. l. ii.

⁴ Diog. Laert.

⁵ Metam. l. xv.

given those who were to defend the city in the night against the attacks of the Carthaginians.¹ By this order each man was to have only one camel's skin, one tent bed, one woollen quilt, and two pillows. The Agrigentines thought this discipline highly severe, and could not be brought to submit to it without difficulty. Among these citizens abandoned to luxury, there were however persons of merit, who made a very good use of their riches, as I have shown elsewhere.

The authority, which Empedocles had acquired at Agrigentum, he employed solely in making peace and good order take place as much as possible.² The supreme command was offered him, which he tenaciously refused. His principal care was to put an end to the divisions that prevailed among the Agrigentines; and to persuade them to consider themselves as all equals, and members of one and the same family. His next attention was to reform the insolence of the principal persons of the city, and to prevent the dissipation of the public revenues.³ As to himself, he employed his own estate in marrying the young women that had no portions. In order to establish equality as much as possible among the citizens of Agrigentum, he caused the council, which consisted of a thousand persons chosen out of the richest citizens, to be abolished.⁴ He rendered it triennial, from perpetual as it was before; and succeeded in ordaining that the people should be admitted to it, or at least such of them as favoured democratical government.

When Empedocles went to the Olympic games, nothing was talked of there but him.⁵ His praises were the common subject of all conversations. It was an ancient custom to sing the verses of the great poets in public, as those of Homer, Hesiod, Archilochus, Mimnermus, Phocylides, and others.⁶ The same honour was done to those of Empedocles. The singer Cleomenes sang his *Katharmoi*, Purifications in the Olympic games. This was a moral poem of three thousand hexameters, composed by our philosopher upon the duties of civil life, the worship of the gods, and the precepts of morality. It took its name from containing maxims, which taught the means for purifying and improving the soul. The golden verses are believed to have been part of this poem.

Empedocles was at the same time a philosopher, poet, historian, physician, and even according to some, magician. It is very probable that his magic was only the profound knowledge he had acquired in whatever was most abstruse in nature. The important service he had done the people of Agrigentum, in making certain periodical winds cease to blow, which by their pernicious nature did great damage to the fruits of the earth, was ascribed to magic: as was also what he did for the inhabitants of Selinontum, in curing them of a pestilence occasioned by the stench of the waters of a river that ran through their city. His magic, as to the first, was his having filled up an opening of a mountain, whence issued the infected exhalations, which a south wind drove upon the territory of Agrigentum; and as to the second, it was his having caused two small rivers to empty themselves into that of Selinontum, which sweetened the water, and removed its bad quality. The most wonderful effect of Empedocles' magic, and which made him be considered as a god, was the pretended resurrection of an Agrigentine woman, named Panthea.⁷ Pliny⁸ speaks of it, as well as Origen.⁹ Heriippus, who contents himself with saying, that having been given over by the physicians, and probably taken for dead, she was cured by Empedocles, reduces that miracle to reality; and Galen¹⁰ seems to give into the same opinion.

It is said that Empedocles,¹¹ in order to confirm the world in the opinion they had conceived of his

divinity by disappearing suddenly, threw himself into the gulf of mount Ætna.¹² But this extravagance has much the air of being the invention of such as have pleased themselves either with throwing the marvellous into the lives of those philosophers, or, on the contrary, with rendering them ridiculous. Authors of greater gravity tell us, that he retired into Peloponnesus, where he died at the age of sixty, according to Aristotle, about the beginning of the 88th Olympiad, A. M. 3576.

ARTICLE II.

DIVISION OF THE ITALIC SECT INTO FOUR SECTS.

THE Italic or Pythagorean sect divided itself into four others: that of Heraclitus, which took his name the Eleatic, of which Democritus was the chief; the Sceptic, founded by Pyrrho; and the Epicurean, instituted by Epicurus.

SECTION I.—SECT OF HERACLITUS.

LITTLE is known of this philosopher. He was a native of Ephesus, and lived in the 58th Olympiad, A. M. 3460. He is said to have had no masters, and to have become learned by continual meditation.¹³

Among many treatises of his composing, that concerning nature, which included his whole philosophy, was the most esteemed. Darius king of Persia, son of Hystaspes, having seen this work, wrote a most obliging letter to Heraclitus, to desire him to come to his court, where his virtue and knowledge would be more esteemed than in Greece. The philosopher, little affected with offers so gracious and so full of goodness, replied bluntly, That he saw nothing among men but injustice, knavery, avarice, and ambition, and that contenting himself with little, as he did, the court of Persia suited ill with him. He was not in the wrong at bottom. It is not surprising, that a Greek born free and an enemy to the pride of Barbarian kings, and the slavery and vices of courtiers, should set a high value upon poverty with independence, and esteem it infinitely more than the greatest fortunes he could expect from a monarch living in the midst of pomp, pride, effeminacy, and pleasures, in a nation devoted solely to luxury. He might indeed have expressed his refusal in more polite terms.

He was a true man hater. Nothing satisfied him; every thing gave him offence. Mankind were the objects of his pity.¹⁴ Seeing all the world abandoned themselves to a joy, of the falsehood of which he was sensible, he never appeared in public without shedding tears, which occasioned his being called the *Weeper*. Democritus, on the contrary, who saw nothing serious in the most serious occupations of men, could not forbear laughing at them. The one could find nothing in life but misery, the other nothing but folly and trifling. Both, in some sense, were in the right.

Heraclitus, disgusted and tired with every thing, at last conceived so great an aversion to mankind, that he retired to a mountain, where he lived upon herbs in company with wild beasts. A drowsy, which that kind of life occasioned, obliged him to return to the city, where he died soon after.

SECTION II.—SECT OF DEMOCRITUS.

DEMOCRITUS, author of this sect, one of the greatest philosophers of the ancient world, was of Abdera in Thrace.¹⁵ Xerxes, King of Persia, having lodged in the house of Democritus' father, left him some Magi, to be his son's preceptors, and to instruct him in their pretended theology and astronomy. He afterwards heard Leucippus, and learned from him the system of atoms and vacuity.

¹⁷ Laert.

His extraordinary inclination for the sciences induced him to travel into all the countries of the world, where there was hopes of finding learned men. He visited the priests of Egypt, the Chaldeans, and the Persian philosophers. It is even said that he went as far as Ethiopia and India, to confer with the Gymnosophists. He neglected the care of his estate, and left his lands uncultivated, in order to apply himself with less interruption to the study of wisdom.¹ Some go so far as to say, but with little probability, that he put out his eyes in hopes of meditating more profoundly, when the objects of sight should not divert the intellectual powers of his soul. It was in some measure blinding himself to shut himself up in a tomb, as it is said he did, in order to apply more freely to meditation.

What seems most certain is, that he expended his whole patrimony in his travels, which amounted to above an hundred talents² (an hundred thousand crowns.) At his return he was cited before the judges, for having spent his estate in that manner. By the laws of his country, those who had squandered their patrimony, were not to be interred in the tombs of their family. He pled his cause himself, and produced, as a proof of the just use he had made of his fortune, the most finished of his works, which he read to the judges. They were so charmed with it, that they not only acquitted him, but caused as much money as he had expended in his travels, undoubtedly out of the public treasury, to be repaid him, erected statues in honour of him, and decreed that after his death the public should charge itself with the care of his funeral: which was accordingly executed. He travelled as a great person, for the sake of instruction, not to enrich himself. He went to the remotest parts of India in quest of the riches of erudition, and scarce regarded the treasures which he found almost at his door, in a country abounding with mines of gold and gems.

He passed some time at Athens, the centre of the sciences, and the abode of wit and learning.³ But far from endeavouring to display his merit and curious knowledge there, he affected to remain unknown: a circumstance very remarkable in a man of learning and a philosopher!

A fact singular enough is related concerning him, but with no other foundation than Hippocrates' letters, which the learned believe spurious. The Abderites, seeing Democritus their countryman regard nothing, laugh at, and ridicule every thing, say that the air was full of images, endeavour to know what the birds said in their songs, and inhabit tombs almost perpetually, apprehended that his brain was turned, and that he would entirely run mad, which they considered as the greatest misfortune that could happen to their city. They therefore wrote to Hippocrates, to desire him to visit Democritus. The great concern they expressed for the health of so illustrious a citizen does them honour. The illustrious physician they had sent for, after some conversations with the supposed sick man, judged very differently of him, and dispelled their fears, by declaring that he had never known a wiser man, nor one more in his senses. Diogenes Laertius also mentions this journey of Hippocrates to Abdera.

Nothing certain is said either of his birth, or the time of his death, A. M. 3584. Diodorus Siculus makes him die at the age of ninety, the first year of the 90th Olympiad.

Democritus had a fine genius, with a vast, extensive, penetrating wit, which he applied to the whole circle of curious knowledge.⁴ Physics, ethics, math-

ematics, polite learning, liberal arts, all came within the sphere of his activity.

It is said, that having foreseen a certain year would prove bad for olives, he bought at a very low rate a great quantity of oil, by which he gained immensely. Every body was amazed, with reason, that a man who had never seemed to regard any thing but study, and who had always set so much value upon poverty, should on a sudden throw himself into commerce, and entertain thoughts of amassing such great riches.⁵ He soon explained the mystery himself, in restoring to all the merchants, of whom he had bought oil, and who were in despair on account of the bargain they had made with him, all the surplus he had acquired, contenting himself with showing, that to become rich was at his own option. There is something of a like nature in the history of Thales.

Epicurus is obliged to Democritus for almost his whole system; and, to render the elegant Latin expression, he is the source, from which the streams that water the gardens of Epicurus, flow.⁶ The latter was in the wrong, in not confessing his obligations to Democritus, and in treating him as a dreamer. We shall show in the sequel his opinions concerning the supreme good of man, the world, and the nature of the gods. It was Democritus also that supplied the Sceptics with all they said against the evidence of the senses.⁷ For besides its being his custom to say, that truth lay hid at the bottom of a well he maintained that there was nothing real except atoms and vacuity, and that all else was only opinion and appearance.

Plato is said to have been the declared enemy of Democritus. He had collected all his books with care, and was going to throw them into the fire, when two Pythagorean philosophers represented, that doing so would signify nothing, because they were then in the hands of many. Plato's hatred for Democritus appears in his having never cited him, even in places where to refute him was the question, though he has mentioned almost all the rest of the ancient philosophers.

SECTION III.—SCEPTIC OR PYRRHONIC SECT.

PYRRHO, a native of Elis in Peloponnesus, was the disciple of Anaxarchus, and accompanied him to India. It was undoubtedly in the train of Alexander the Great, whence we may collect in what time he flourished. He had practised the art of painting before he applied himself to philosophy.

His opinions differed little from those of Arcesilaus, and terminated in the incomprehensibility of all things. He found in all things reasons for affirming, and reasons for denying; and therefore he did assent after having well examined both sides of a question, concluding only that hitherto he saw nothing clear and certain in it, *non liquet*, and that the subject in question required farther discussion. Accordingly he seemed during his whole life in quest of truth; but he took care always to contrive subtleties, to avoid consenting that he had found it: that is to say, in reality he would not find it; and that he concealed so hideous a turn of mind under the specious outside of inquiry and examination. Though he was not the inventor of this method of philosophizing, it however bears his name: the art of disputing upon all things, without ever going farther than to suspend one's judgment, is called *Pyrrhonism*. The disciples of Pyrrho were called *Sceptics*, from a Greek word *εἰσπραγμαι*, which signifies to consider, to examine, because their whole application terminated in that.

Pyrrho's indifference is astonishing; and if all Diogenes Laertius relates of it be true, it rose even to madness. That historian says, he did not prefer one

⁸ Laert.

thing to another; that a wagon or a precipice did not oblige him to go a step out of his way; and that his friends who followed him, often saved his life. However, he one day ran away from a dog that flew at him.¹ When he was rallied upon a fear so contrary to his principles, and so unworthy of a philosopher: "It is hard," replied he, "to divest one's self entirely of the man." His master Anaxarchus having fallen into a ditch in his company, he walked on without so much as offering him his hand.² Anaxarchus far from taking it amiss, blamed those who reproached Pyrrho for so inhuman a behaviour, and praised his disciple for his indifference of mind, which argued his loving nothing. What would become of society, and the commerce of life, with such philosophers? Pyrrho maintained that life and death were equally indifferent. "Why don't you die then?" somebody asked him. "For that very reason," replied he, "because life and death are equally indifferent."³

He taught an abominable doctrine, that opens the way for crimes of every kind:⁴ that the honour and infamy, the justice and injustice of actions, depeuded solely upon human laws and customs: in a word, that there was nothing honest or dishonest, just or unjust, in itself.

His country respected him highly, conferred the dignity of pontiff upon him, and granted all philosophers an exemption from taxes upon his account: a very singular conduct in regard to a man, who merited only punishments, whilst they loaded him with honours.

SECTION IV.—EPICUREAN SECT.

EPICURUS, one of the greatest philosophers of his age, was born at Gargettium in Attica, in the third year of the 109th Olympiad, A. M. 3663.⁵ His father Neocles, and his mother Cherestrata, were of the number of the inhabitants of Attica sent by the Athenians into the island of Samos. This occasioned Epicurus' passing his infancy in that island. He did not return to Athens till the eighteenth year of his age.⁶ It was not to fix there: for some years after he went to his father, who lived at Colophon: and afterwards resided in different places. He did not finally settle at Athens, till about the thirty-sixth year of his age, A. M. 3699. He there erected a school in a fine garden which he had purchased. An incredible throng of hearers soon came thither from all parts of Greece, Asia, and even Egypt, to receive his lessons. If we may believe Torquatus,⁷ the warmest assertor of the Epicurean sect, upon this head, the disciples of Epicurus lived in common with their master in the most perfect friendship. Though throughout all antiquity, at least for many ages, scarce three couple of true friends had appeared. Epicurus had known how to unite great numbers of them in one house, and that a small one.⁸ The philosopher Numenius, who lived in the second century, observes that amid the discord and divisions which prevailed among each of the other sects, the disciples of Epicurus had continued in union down to his time.⁹ His school was never divided; but always followed his doctrine like an oracle. His birth-day was celebrated in the time of Pliny the naturalist,¹⁰ that is to say, above four hundred years after his death: they even feasted the whole month in which he was born. His picture was to be seen every where.

Epicurus composed a great number of books, which are made to amount to above three hundred; and piqued himself upon quoting nothing, and deriving every thing from his own fund. Though none of them are come down to us, no philosopher's opinions are better known than his. We are most indebted for them to the poet Lucretius, and Diogenes Laër-

tius, not to mention Cicero in his philosophical works. The learned Gassendi has collected with great exactness all that is to be found in ancient writers concerning the doctrine and person of Epicurus.

He placed the Atomical system in exceeding reputation. We shall see that he was not the inventor of it, but that he only changed some things in it. His doctrine upon the supreme good of man, which he makes to consist in pleasure, contributed very much both to decri the sect, and to make it gain ground: it will also be spoken of in the sequel, as well as his opinions concerning the nature of the gods, providence, and destiny.

The praise given Epicurus by Lucretius, his faithful interpreter, shows what we ought to think of that philosopher's system. He represents him as the first of mortals, who had the courage to rise up against the prejudices that blinded the universe, and to shake off the yoke of religion, which till then had held mankind subjected to its empire; and that without being awed either by respect for the gods, their fame, their thunders, or any other motive.

Humana ante oculos fœdè cum vita jaceret
In terris oppressa gravi sub religione—
Primum Graius homo mortales tollere contra
Est oculus ausus, primusque obistere contra
Quem nec fama drûm nec fulmina, nec minitanti
Murmure compressit calum.

Epicurus is praised for having never departed from his zeal for the good of his country.¹¹ He did not quit it when besieged by Demetrius Poliorcetes,¹² and determined to share in the miseries it suffered. He lived upon beans, and gave his disciples the same food. He desired good sovereigns, but submitted to those who governed ill—a maxim of great importance to the tranquillity of states. Tacitus expresses it in these terms: *Bonos Imperatores volo capere, qualescumque tolerare.*¹³ "To pray for good emperors, and suffer them of whatsoever kind they be."

Epicurus died in the torments of a retention of urine, which he supported with extraordinary patience and constancy, the second year of the 127th Olympiad, A. M. 3733, at the beginning of his seventy-second year.

GENERAL REFLECTION UPON THE SEVERAL SECTS OF PHILOSOPHERS.

I have endeavoured to set the history of the different sects of the heathen philosophers in as clear a light as possible. Before I take my leave of that subject, and proceed to explain the various opinions of these sects, I think it incumbent on me to apprise the reader, that he would be deceived, if he expected any considerable change or reformation in the manners of men from the different instructions of all these philosophers. The wisdom, so much boasted of by the most learned among the many sects into which the universe was divided, could determine no question, and multiplied errors. All human philosophy pretended to, was to instruct men in living in a manner worthy of men; because it discovered in men no qualities but such as were human, and allotted to them only the enjoyment of human things. Its instructions are not useless in this point, as they at least dissuade men from the brutal life that dishonours the excellency of their nature, and makes them seek their happiness in the vilest part of their being, which is the body. But all the reformation they effect extends to very few things. What progress have the sects of philosophers made, though endued with so much eloquence, and supported with so much subtlety? Have they not left mankind where they found them, in the same perplexities, prejudices, and blindness? And indeed how could they labour for the reformation of the human heart, as they neither knew wherein it was irregular, nor the source of its irregularity? Without therevelation of the sin of Adam, what could be known of men, and of his real state? Since his fall he abounds with amazing contrarieties.¹⁴

¹³ Tacit. Hist. l. iv. c. 8.

¹⁴ Mr. Du Guet. J. C. crucifié, vol. I. c. 5. d'après M. Paschal

He retains of his first origin characters of greatness and elevation, which his degradation and meanness have not been able to extinguish. He wills, he aspires at every thing. His desire of glory, immortality, and a happiness that includes all good, is infinite. A nothing employs him, a nothing afflicts or consoles him. On a thousand occasions he is an infant; weak, fearful, and dejected; without mentioning his vices and passions, which dishonour, debase, and sometimes makes him inferior to the beasts of the field, to which he approaches nearer than to man by his unworthy inclinations.

The ignorance of these two conditions threw the philosophers into two equally absurd extremes. The Stoics, who made an idol of their chimerical wisdom, were for inspiring man with sentiments of pure and perfect greatness: which is not his condition.¹ The Epicureans, who had degraded him by reducing him to mere matter, inculcated sentiments of pure and absolute meanness into him; and that is also as little his condition. Philosophy was not capable of discerning things so near, and at the same time so remote from each other: so near, because united in the state of humanity; and so remote, because they belong by their nature to states entirely different. A distinction of this kind was not made before Jesus Christ, or independently of Jesus Christ. Before him man either knew, nor was capable of knowing himself. He either exalted or debased himself too much. His teachers always deceived him, either in flattering a pride it was necessary to depress, or augmenting a meanness it was necessary to exalt. Hence I comprehend how necessary revelation was to me, and how precious I ought to think the gift of the faith. It is true, the manner in which the sin of Adam extended down to me, is covered with obscurities. But from that very point wrapt up in darkness, issues the light which makes all clear, and dispels all my difficulties. I am, therefore, far from refusing to believe one only thing, of which the belief is rewarded by the understanding of so many others: and choose rather to submit my reason to a single article, which it does not comprehend, but which is revealed, than to make it fly out against an infinity of others, it comprehends as little, and of which divine revelation neither forbids us the examination, nor removes the difficulties.

PART SECOND.

HISTORY OF PHILOSOPHY.

INTRODUCTION.

BY the history of philosophy I understand the doctrines taught by each sect of the ancient philosophers.

Philosophy, among the ancients, consisted of three parts: Dialectics or Logic, which directs the operations of the mind, and the formation of argument; Physics (that included also the metaphysics) which considers the structure of the world, the effects of nature, the existence and attributes of the Divinity, and the nature of the soul; and, lastly, Ethics, which lays down the morals, and treats of the duties of life.

This is an ample subject, and the reader must not expect that I should treat it to the bottom. I have already declared, more than once, that I do not write for the learned. Stoics, Peripatetics, and Epicureans, are frequently mentioned in books and conversation. I thought it proper therefore to give the generality, and persons of no great reading, some knowledge of the principal questions discussed by those philosophers, but without entering into an exact detail of their disputes, which are often very knotty and disagreeable.

Before I proceed to my subject, I cannot help observing the wonderful taste that prevailed among the most considerable persons for all the sciences, and in particular for the study of philosophy. I do not speak only of the Greeks. We have seen how much the famous sages of Greece were esteemed in the court of Cæsar; the value Pericles set upon, and the use he made of the lessons of Anaxarchus; what passion the

most illustrious citizens of Athens had for the conversations of Socrates; in what manner Dion, notwithstanding the allurements of a court abandoned to pleasure, devoted himself to Plato; with what taste even for the most abstracted knowledge, Aristotle inspired his pupil Alexander the Great; and lastly, how highly Pythagoras and his disciples were considered by the princes of that part of Italy called Great Greece. The Romans did not give place in this respect to the Greeks, from the time that learning and the polite arts were introduced among them. Paulus Æmilius, after the conquest of Macedonia, thought one of the most grateful fruits of his victory, the having brought a philosopher from Greece to Rome, to instruct his children, who were then in the army, and to converse with himself at his leisure hours. Scipio Africanus, who destroyed Carthage and Numantia,² those formidable rivals of Rome, in the midst of the most important affairs both of war and peace,³ knew how to procure himself moments of repose and retirement, for enjoying the conversation of Polybius and the philosopher Panætius, whom he had always along with him. Lælius, that model of virtue, more worthy of respect for his mild wisdom than his dignities, the intimate friend of Scipio, shared with him in the pleasure of those learned and agreeable conversations. The friendship of those two great men for Panætius rose to a great degree of familiarity, and Cicero says, the philosopher highly deserved it.⁴ What honours did not Pompey render Posidonius, going expressly to Rhodes, on his return from his glorious campaigns against Mithridates, to see and hear that philosopher! Lucullus, even while in the field, where a general has scarce time to breathe, found moments of leisure for gratifying his taste for polite learning, and in particular for philosophy, and to hear the philosopher Antiochus, who was the companion of all his expeditions.⁵

The Abbé Godey,⁶ in respect to a letter of Dionysius Halicarnassensis, observes upon the use which the great men of the Roman commonwealth made of their leisure. The excellent education of the Romans, says he, made them learned almost from their infancy. They were perfectly instructed in their own and the Greek tongues: to learn these two living languages, cost them little. They were inspired very early with a taste for the most excellent writers. That taste, instilled so soon into their infant minds, grew strong with years, and inclined them to cultivate the society of learned men, whose conversation might supply the place of reading, of which their employments deprived them. Thence it followed that the Romans, whose minds were all improved by letters, lived together in a continual intercourse of erudition. And what must have been the conversation of a great number of Romans, when they happened to meet in the same company! Hortensius, Cicero, Cotta, Cæsar, Pompey, Cato, Brutus, Atticus, Catullus, Lucullus, Varro, and many others!

But never did any one carry the taste and ardour, especially for philosophy, higher than Cicero. It is not easy to conceive how a man so much taken up as he was between the affairs of the bar and those of the state, could find time to make himself master, as he

Quest.* l. iv. n. 4.

⁶ *Mém. de l'Acad. des Belles Lettres*, tom. v. p. 190.

had done, of all the questions discussed in his days among the philosophers. That time, as he tells us himself,¹ in respect to polite learning, was what others bestowed on walking, pleasure, the public shows, and gaming, and which he employed either in his closet, or in familiar conversation with friends of the same taste as himself. He was convinced that such studies and recreation perfectly suited senators and statesmen, when they did not interfere with what they owed the public.² Were it better, says he, that their meetings were in some measure passed in silence, or turned upon trifles and insignificant matters? The philosophical books he has left us, which are not the least estimable part of his works, show how far he had carried his application in that way. Without speaking of all the rest, he lays down excellent rules in them for those who write upon controverted subjects, and who undertake to refute their adversaries. He is for engaging in disputes only from the love of truth, without prejudice, and without desire either of displaying one's wit, or of carrying one's point.³ He banishes all passion, anger, heat, insult, and reproaches, from them. "We are," says he, speaking of himself, "ready to refute our adversaries without tenaciousness in error, and to be refuted by them without resentment."⁴ How amiable is this character! How beautiful is it to seek in disputes, not to overcome our opponents, but solely to make truth triumphant! What advantage would not self-love itself, if it were allowable to hearken to it, find in such a conduct, to which it is not possible to refuse one's esteem, which adds new force to argument, which, while it gains the heart, prepares the mind for conviction, and by politeness and modesty, spares the mortifying confession of being mistaken, the secret pain, with which, through a vicious shame, it is almost always attended. When will this taste for study, and this wise moderation in disputes, revive among us?

We must, however, own for the honour of our times, that we have persons of extraordinary merit, who distinguish themselves particularly by these two qualities. I shall only mention the president Bouhier in this place. His learned remarks upon the text of several of Cicero's books, would alone suffice to show the great extent of that illustrious magistrate's knowledge. The Abbé Olivet, in his preface to the new edition of the Tusculan questions, translated partly by the president Bouhier, and partly by himself, with a success that does equal honour to them both, says very well; "Perhaps the example of a man of his rank and merit may revive the taste for critical learning in France: a taste so common heretofore, that the celebrated Lampinus, when he devoted his labours to Cicero, was assisted by the greatest persons of his times. For, to make a transient observation, the list which he left us of them, and which may be seen at the end of his preface, proves, that this same Cicero, who in our days is banished into the colleges, was two hundred years ago the delight of all the most considerable persons either of the bar or church." But I admire the character of modesty and wisdom, which prevail in the writings of the P. Bouhier, still more than his vast erudition. Mr. Davies had made some observations in England upon the same text of Cicero as himself. "The career of us both," says the magistrate, "in

this kind of literary amusement, does not resemble those, in which rivals ought only to aspire at the honour of overcoming. The true glory of critics consists in seeking the truth, and in doing justice to those who have found it. I am therefore charmed with doing it to the learned Englishman." He even thanks him for setting him right in respect to certain mistakes. What a difference there is between so moderate and rational a disposition, and the warmth of those authors who are so jealous of their reputation, as not to be able to suffer the slightest criticism.

To return to my subject. The division of philosophy into three parts, logic, ethics, and physics, supplies me with that I am to follow in the ensuing brief account of them.

CHAPTER I.

OPINIONS OF THE ANCIENT PHILOSOPHERS UPON LOGIC.

DIALECTICS, or Logic, is the science that lays down rules to direct the operations of the mind in inquiries after the true, and to teach us to discern it from the false.⁵ I have observed with sufficient extent in the fourth volume of my treatise upon the study of polite learning, of what advantage this part of philosophy was, and the use to be made of it.

Aristotle, among the ancients, is the most excellent author of logic. Besides several other works, we have his four books *De Analyti*, wherein he lays down all the principles of reasoning. "This genius," says Rapin the Jesuit in his comparison of Aristotle and Plato, "so replete with reason and understanding, fathoms the abyss of the human mind in such a manner, that he penetrates into all its springs by the exact distinction he makes of its operations. The vast fund of the thoughts of man had not before been sounded, in order to know its depth. Aristotle was the first who discovered this new method for attaining knowledge by the evidence of demonstration, and for proceeding geometrically to demonstration by the infallibility of syllogism, the most accomplished work, the greatest effort of human genius." This is a praise, to which nothing can be well added: and, indeed, Aristotle cannot be denied the glory of having carried the force of reasoning very far, and of having traced out the rules and principles of it with much subtlety and discernment. Cicero seems to acknowledge this philosopher to be the author and inventor of logic; he ascribes that honour himself to Zeno of Elæa, according to Diogenes Laertius.⁶ Hence it is believed that Zeno was the first who discovered the natural series and dependence of principles and consequences, of which he formed an art, that till then had nothing fixed and regular. But Aristotle, without doubt, improved exceedingly upon him.

This study was the principal occupation of the Stoics, who acknowledged another Zeno for their founder.⁷ They piqued themselves upon excelling in this kind of philosophy. And, indeed, their manner of reasoning was warm, vigorous, close, and proper to dazzle and perplex their opponents; but obscure, dry, and void of all ornament, often degenerating into minuteness, sophism, and captious wrested arguments, to use Cicero's term.⁸ Though the question, Whether there be any thing certain in our knowledge? ought to be considered only as preliminary to logic, it was however made the principal object of it, and what the philosophers disputed with most warmth. Their difference of opinion upon this subject consisted in its being believed by some, that it was possible to know and to judge with certainty; and on the contrary by others, that nothing could be certainly known, nor consequently affirmed, as positive.

Socrates's manner of disputing might have made

¹ Pro Arch. Poet. n. 13.

² Si quodam in libro verè est à nobis philosophia laudata, profectò ejus tractatio optimo atque amplissimo quoque dignissima est: nec quidquam aliud videndum est nobis, quod populus Romanus hoc in gradu collocavit, nisi ne quid privati studiis de operâ publicâ detrahatur. — Quasi verò clarorum virorum aut tacitis congressus esse oporteat, aut ludicos sermones, aut rerum colloquia leviorum. *Academ. Quest.* l. iv. n. 6.

way for this latter method of philosophizing.¹ Every body knows that he never expressed his opinion, that he contented himself with refuting that of others without affirming any thing positively, and that he declared, he only knew that he knew nothing; and it was even for this, he believed that he deserved the praise given him by Apollo, of being the wisest of mankind. Many think Plato followed the same method, but authors do not agree about it. But it is certain, that the two most celebrated of Plato's disciples,² Spensippus his nephew, and Aristotle, who formed two famous schools, the first that of the Academics, the other that of the Peripatetics, abandoned Socrates's custom of never speaking but with doubt, and of affirming nothing. Reducing the manner of treating questions to certain rules and a certain method, they composed of these rules and method, an art, a science, known under the name of the dialectics, or logic, which makes one of the three parts of philosophy. Though these two schools had a different name, they had at bottom the same principles, with some very little difference, and are generally confounded under the name of the ancient Academy.

The opinion of the ancient Academy was, that, though our knowledge has its origin in the senses, the senses do not judge of truth, but the mind, which alone deserves to be believed, because the mind alone sees things as they really are in themselves, that is to say, it sees what Plato calls the ideas, which always subsist in the same state, without suffering any change.

Zeno, the founder of the Stoics,³ who was of Citium, a small town of Cyprus, granted something more to the evidence of the senses, which he pretended to be certain and clear, but under certain conditions, that is, if they were perfect and in good health, and without any obstacle to prevent their effect.⁴

Epicurus went still farther. He gave so great a certainty to the evidence of the senses, that he considered them as an infallible rule of truth: so that by his doctrine, objects are precisely what they appear: that the sun, for instance, and the fixed stars, had really no greater magnitude than they seem to have to our eyes.⁵ He admitted another method of discerning truth, that is, the ideas we have of things, without which we can neither form any question, nor pass any judgment. "Antecepta animo quedam informatio, sine qua nec intelligi quicquam, nec queri, nec disputari potest."⁶

Zeno made use of the same principle, and insisted particularly upon the clear, evident, and certain ideas, which we naturally have of certain principles relating to morals and the conduct of life. "The good man," says he, "is determined to suffer every thing, and to perish in the most cruel torments, rather than depart from his duty, and betray his country. I ask, why he imposes upon himself a law so cruel, and so contrary in appearance to his interest, and whether it be possible for him to take such a resolution, if he had not a clear and distinct idea in his mind of justice and fidelity, which evidently show him, that he ought to expose himself to every kind of infiction, rather than act what is contrary to justice and fidelity."⁷ This argument, which Zeno founds upon the certainty of clear and evident ideas, shows the falsehood of the principle generally received in the school of the Peripatetics, "That all our ideas are derived from our senses." For, as the logic of Port

Royal observes, there is nothing that we conceive more distinctly than our thought itself, nor any proposition more clear than this, *I think, therefore I am*. Now we could have no certainty of this proposition, if we did not conceive distinctly what it is to be, and what it is to think. And we must not be asked to explain these terms, because they are of the number of those, which are so well understood by all the world, that endeavouring to explain them, would render them obscure. If it cannot be denied, that we have in us the ideas of being and thinking, I would know by which of the senses they entered into our minds. It must then be admitted that they do not in any manner derive their origin from the senses.

Zeno showed also the falsehood and ridicule of the opinion of the Academics by another reflection.⁸ In the ordinary conduct of life, said he, it is impossible to make any choice, or determine upon any thing, without first having a fixed and certain principle in the mind, to determine us to choose one thing rather than another: for without that we should continue always in uncertainty and inaction.

The followers of the ancient Academy, and the Stoics, agreed therefore with each other, as both maintained, though upon different principles, that there were certain means for knowing truth, and consequently evident and certain knowledge.

Arcefilaus rose up with great vivacity against this opinion, confining himself particularly to opposing Zeno, and formed a sect, which was called the Middle Academy,⁹ and subsisted down to Carneades, the fourth successor of Arcefilaus, who founded the sect called the New Academy. As it deviated only in some small alterations from the Middle one, they are confounded with each other, and both included in the name of the New Academy. This sect was in great reputation. Cicero embraced it openly, and declared himself its defender. If we may believe him,¹⁰ it was neither through obstinacy, nor the frivolous desire of overcoming, that Arcefilaus attacked Zeno, but through the obscurity of all knowledge, which had obliged Socrates, as well as Democritus, Anaxagoras, Empedocles, and almost all the ancient philosophers, to confess their ignorance, and to agree, that there was nothing to be known, nothing determined with certainty, not even what Socrates had excepted in saying; "I know only one thing, which is, that I know nothing."

The main point in dispute between Zeno and Arcefilaus was the evidence of the senses. Zeno affirmed, that truth might be certainly known by their aid: Arcefilaus denied it. The latter's principal reason was,¹¹ that there is no certain mark to distinguish false and delusive objects from such as are not so. There are some, which either are, or appear so perfectly like each other, that it is impossible to discern the difference. Hence, in judging and affirming any thing of them, one is liable to err, and to take the true for the false, and the false for the true, which is entirely unworthy of a wise man. Consequently, to act with prudence, he ought to suspend his judgment, and decide nothing.¹² And this was what Arcefilaus did: for he passed whole days in disputing with others, and in refuting their opinions, without ever expressing his own.

The Academics, by his example, acted ever after in the same manner. We have seen that Carneades, when he went to Rome with two other deputies, spoke one day for, and the next against justice, with equal force and eloquence. They pretended, that the end of these discourses, wherein they maintained both sides of a question, was, by such inquiries, to discover something true, or at least that came near the truth.¹³ The only difference, said they, between us,

and those who believe they know something, is, that these other philosophers boldly advance what they maintain for true and incontestible, and we have the modesty to affirm our positions only as probable and like truth. They added, that their doctrine was accused, without foundation, of reducing mankind to inaction, and of opposing the duties of life;† as probability and the likeness to truth sufficed to determine their choice of one thing rather than another. We have an excellent treatise of Cicero's, entitled *Lucullus*, which is reckoned as the fourth book of the Academic Questions; wherein Cicero makes Lucullus defend the opinion of the ancient Academy, That there are things which a man is capable of knowing and comprehending; and for himself, he maintains the contrary opinion,‡ which is that of the New Academy, That man's knowledge extends no farther than appearances, and that he can have none but probable opinions. Lucullus, in concluding his dissertation, which is of considerable length, and very eloquent, apostrophizes in these terms to Cicero: "Is it possible, after the magnificent praises you have given philosophy, that you can embrace a sect which confounds the true with the false, which deprives us of the use of reason and judgment, which forbids us to approve any thing, and divests us of all our senses? The Cimmerians themselves, who are said never to see the sun, have some fires, some twilight, to illuminate them. But the philosophers, for whom you declare, in the midst of the profound darkness with which they surround us, leave us no spark of light to guide us. They keep us hampered in chains, which will not suffer us to make the least motion. For, to conclude, to forbid us, as they do, to give our consent to any thing whatsoever, is actually to deprive us entirely of the use of our minds, and at the same time to prohibit us all manner of action." It were hard to refute the doctrine of the New Academy better, which really seems to degrade man, in confining him to a state of absolute ignorance, and in leaving nothing to guide him but doubt and uncertainty.

Father Mallebranche, in his inquiry after truth, lays down with great extent an excellent principle concerning the senses. It is, that the senses were given us by God, not to enable us to know the nature of objects, but their relation to us; not what they are in themselves, but whether they are advantageous or hurtful to our bodies. This principle is highly luminous, and destroys all the little glosses and chicanes of the ancient philosophers. As to objects in themselves, we know them by the ideas we have of them.

I have said that the New Academics contented themselves with denying certainty, and admitting probability.§ The sect of Pyrrho, which was a branch that sprung from the Academics, even denied that probability, and pretended, that every thing was equally obscure and uncertain.

But the truth is, that all these opinions, which have made so much noise in the world, never subsisted except in discourse, disputation, or writing, while nobody ever was seriously convinced by them. They were the diversions and amusements of persons of talent and leisure: but they were never opinions by which these persons were inwardly much affected, and consequently willing to direct their conduct. They pretended that sleeping could not be distinguished from waking, nor madness from reason: but notwithstanding all their arguments, could they doubt whether they slept, or whether they were in their senses? But if there had been any body capable of these doubts, at least no man could doubt whether he is, whether he thinks, or whether he lives. For whether he sleeps or wakes, whether he is in or out of his senses, whether he does, or does not, err, it is at least certain, because he thinks that he is, and that he lives; it being impossible to separate being and

life from thought, and to believe that what thinks is not, and does not live.

CHAPTER II.

OPINIONS OF THE ANCIENT PHILOSOPHERS CONCERNING ETHICS, OR MORALITY.

MORAL philosophy, or Ethics, whose object is the regulation of the manners, is, properly speaking, the science of man. All other knowledge is in some measure external and without him, or at least may be said not to extend to what is more immediately personal and himself, I mean the heart: for it is in that the whole man consists, and is what he is. They may render him more learned, more eloquent, more just in his reasonings, more knowing in the mysteries of nature, more fit to command armies, and to govern states: but they neither make him better, nor wiser. These however are the only things that concern him nearly, in which he is personally interested, and without which all the rest ought to appear next to perfectly indifferent.

It was this induced Socrates to believe, that the regulation of the manners was to be preferred to all other science. Before him the philosophers almost wholly devoted themselves to inquiring into the secrets of nature, to measuring the extent of lands and seas, and in studying the course of the stars. He was the first that placed the Ethics in honour, and to use the terms of Cicero, brought philosophy down from heaven into cities,‖ introduced her also into houses, and familiarized her with individuals, in obliging her to give them precepts upon the manners and conduct of life. She did not confine herself to the care of particulars. The government of states was always the principal object of the reflections of the most celebrated philosophers. Aristotle and Plato have left us several tracts of great extent upon this subject, which have always been highly esteemed, and contain excellent principles. This part of moral philosophy is called *Politics*. I shall not treat it separately in this place; and shall content myself in the sequel, where I shall speak of duties, with making some extracts from Plato and Cicero, which will show what noble ideas they had of the manner of governing states.

Moral philosophy ought to instruct mankind principally in two things. It ought, in the first place, to teach them in what that supreme good, or *happiness*, consists, at which they all aspire; then to show them the virtues and duties, by which they may attain it. It is not to be expected that Paganism should lay down the purest and most perfect maxims upon matters of such importance. We shall find a mixture of light and darkness in it, which will amaze us, and is at the same time highly capable of instructing us.

I shall add a short discourse upon civil law to my account of Ethics, or moral philosophy.

ARTICLE I.

OPINIONS OF THE ANCIENT PHILOSOPHERS UPON THE SUPREME GOOD, OR HAPPINESS, OF MAN.

IN all moral philosophy there is not a more important subject than that which relates to the supreme good of man. Many questions are discussed in the schools of little importance to the generality of men, and in which they might dispense with instructing themselves, without any great detriment to the manners and conduct of life. But the ignorance of what constitutes his supreme good leads man into infinite error, and occasions his walking always by chance, without having any thing fixed and determinate, and without knowing either where he goes, or what paths

ut, in utramque partem dicendo et audiendo elincit et tanquam exprimit aliquid, quod aut verum sit, aut ad id quam proximè accedat. *Lib. iv. n. 7, 8.*

§ *Logic of Por. Boial, Part. iv. c. 1.*

‖ A Socrate omnia, quæ erit de vita et moribus, philosophia manavit. *Tuscul. Quæst. l. iii. n. 8.* The more ancient philosophers, and especially Pythagoras, had given their disciples good precepts of morality: but did not make them their principal doctrine like Socrates.

§ Socrates primus philosophum devocavit à cælo, et in urbibus collocavit et in domos etiam introduxit, et cœcig de vita et moribus rebusque bonis et malis quærere. *Ibid. l. 5. n. 10.*

he ought to take:¹ whereas that principle once well established, he knows all his duties clearly, and to what he is to adhere in every thing else.

Philosophers are not the only persons that take pains to inquire wherein this supreme good consists; but all men, the learned, the ignorant, the wise, the stupid: there is nobody that does not share in this important question.² And though the head should continue indifferent about it, the heart could not avoid making its choice. It raises this secret cry of itself in regard to some object: Happy is he who possesses that!

Man has the idea and desire of a supreme good implanted in his nature: and that idea and desire are the source of all his other desires, and of all his actions. Since his fall he retains only a confused and general notion of it, which is inseparable from his being. He cannot avoid loving and pursuing this good, which he knows only confusedly: but he knows not where it is, nor wherein it consists, and the pursuit of it precipitates him into an infinity of errors. For finding created good things which satisfy some small part of that insatiable avidity which engrosses him, he takes them for the supreme good, directs all his actions to them, and thereby falls into innumerable crimes and errors.

This we shall see evidently in the different opinions of the philosophers upon this head. Cicero has treated it with abundance of extent and erudition in his five books, *De Finibus bonorum et malorum*, in which he examines wherein real good and evil consist. I shall confine myself to the plan he has followed, and shall relate after him what the Epicureans, Stoics, and Peripatetics, the three most celebrated sects of philosophy, thought upon this subject.

The two last will, from time to time, afford us excellent maxims upon different subjects, but often mixed with false principles and gross errors. We are not to expect to find any thing instructive in them concerning future good. Human philosophy does not exalt man above himself, but confines him to the earth. Though many of the philosophers were convinced of the immortality of the soul, and in consequence that this life is but a moment in respect to the eternal duration of our souls, they have however devoted their whole study and attention to this life of a moment. What was to happen hereafter in the other, was only the subject of some barren conversations, from which they deduced no consequence either from their own conduct, or that of others. Thus these pretended sages, who knew all things except themselves, and to what every particular thing was destined except man, may be justly considered as ignorant and senseless. For, not to know what one is, and whither one goes, to be ignorant of one's end, and of the means for attaining it; to be learned in what is superfluous and foreign, and blind to what is personal and necessary, is certainly to be void of sense.

SECTION I.—OPINIONS OF EPICURUS CONCERNING THE SUPREME GOOD.

THE name alone of Epicurus suffices to inform us, that in the present question we are not to expect to be inspired by him with noble and generous sentiments.³

According to all the philosophers, That is called the supreme good, upon which all other good depends, and which depends itself upon no other. Epicurus makes this supreme good consist in pleasure, and by necessary consequence, supreme evil in pain.⁴ Nature herself, says he, teaches us this truth, and prompts us from our birth to pursue whatever gives us pleasurè as our supreme good, and to avoid what-

ever gives us pain as our supreme evil. There is no more occasion for studied arguments to establish this truth, than there is to prove that fire is hot, snow white, and honey sweet: which are self-evident. Let us suppose, on the one side, a man enjoying the greatest pleasures both of body and mind, without any fear of their being interrupted; and on the other, a man suffering the sharpest pains, without any hope of relief; can we doubt on which side to place supreme good and supreme evil?

As it does not depend upon man to exempt himself from pain, Epicurus opposes that inconvenience with a remedy founded upon a reasoning, which he believes very persuasive.⁵ "If pain be great," says he, "it will be short; if long, it will be slight." As if a disease did not often happen to be at the same time both long and painful, and reasoning had any power over the sense of feeling. He proposed another remedy, of no greater efficacy, against the sharpness of pain; which was to divert the mind from the evils we suffer, by turning our whole attention upon the pleasures we have formerly enjoyed, and upon those we are in hopes of tasting hereafter.⁶ How! might one reply to him, whilst the violence of pain racks, burns, and agonizes me, without a moment's intermission, do you bid me forget and disregard it? Is it in my power then to dissemble, and forget in that manner? Can I stifle and silence the voice of nature at such a time?

When he was obliged to give up all these false and wretched reasonings, he had no other evasion than to admit, that his wise man might be sensible of pain, but that he would persist in believing himself happy during it; and to this he adhered.⁷ Cicero tells us, that whilst he talks in this manner, he found it scarce possible to forbear laughing. If the sage be tortured, if he be burned, (one would imagine Epicurus was going to say, that he would bear it with constancy, and not sink under it: but that is not enough for him, he goes still farther) if the sage were in the burning bull of Phalaris, he would cry out with joy, "How grateful is this! how little I value it!"⁸ It is surprising to hear such words from the idolator of voluptuousness, the man who makes supreme good consist in pleasure, and supreme evil in pain. But we are still more surprised when we see Epicurus sustain this generous character to the last, and to hear him in the midst of the acutest pangs of the stone, and the excessive torments of the most terrible colic, cry out: "I am happy. This is the last and most fortunate day of my life."⁹

Cicero asks, how it is possible to reconcile Epicurus with himself? As for him, who does not deny pain to be pain, he does not carry the virtue of the wise man to so high a pitch. "To me it is enough," says he, "if he supports evils with patience. I do not require that he should suffer them with joy. For undoubtedly pain is a sad, sharp, bitter thing, contrary to nature, and exceedingly hard to undergo."¹⁰ This is thinking and speaking reasonably. The language of Epicurus is that of pride and vanity, which seeks to exhibit itself as a spectacle, and whilst it displays a false courage, proves a real weakness. For the rest, these absurd consequences of Epicurus, were inevitably necessary consequences of his erroneous princi-

¹ De Finib. l. ii. n. 93. Tuscul. Quæst. l. ii. n. 44, 45.

² De Finib. l. iii. n. 33, &c. Id. l. ii. n. 17.

³ Non est in nostra potestate, fiduciamque his rebus quas males esse opinemur, dissimulatio vel oblivio. Lacerant, vexant, stimulos admovent, ignes adhibent, respirare non sinit; et tu oblivisci jubes, quod contra naturam est? Cicero.

⁴ In Phalaridis tauro si erit, dicit; Quam suave est hoc! Quam hoc non curo! Cicero.

⁵ Quid porro? Non aequi incredibile videtur, aliquem in summi cruciatibus positum, dicere: Beatus sum? Atqui hæc vox in nostra officina voluptatis est audita: Beatus sumus, inquit, hæc et ultimum dico ego, Epicurus; cum illum hinc uritur diffinitus torquet, hinc insensibilis excruciat dolor ventris. Seneca, Epist. 92.

⁶ Tullius dolorem, dolorem esse non negat—Ego, inquit, tantum vim non tribui sapientie contra dolorem. Si fortis in perferendo, officio satis est; ut lætetur etiam, non postulo. Tristitia enim res est sine dubio, aspera, amara, inimica nature, ad patiendum tolerandumque difficilis. Tuscul. Quæst. l. ii. n. 33, et 12.

¹ Summum bonum si ignoratur, vivendi rationem ignorari necesse est. Ex quo tantus error consequitur, ut, quem in portum se recipiant, scire non possint. Cogitatur autem rerum finibus cum intelligitur quid sit et honorum extremum et malorum, inventa viæ via est, conformatioque omnium officiorum.—Hoc constituto, in philosophia, constituta sunt omnia. De Finib. bon. et mal. l. v. n. 15.

² Omnis auctoritas philosophæ consistit in beata vita comparanda. Beate enim vivendi cupiditate incensati omnes sumus. Ibid. n. 86.

³ Epicurus, in constitutione finis, nihil generosum sapit atque magnificum. De Finib. l. i. n. 23.

⁴ De Finib. l. i. n. 29, 30.

plea. For if the wise man must be happy as long as he is wise, pain, not depriving him of his wisdom, cannot deprive him of his happiness. Thus he is reduced to affirm himself happy in the midst of the most exquisite torments.

It must be owned, that Epicurus has maxims and even actions ascribed to him, which are dazzling and surprising, and which give a quite different idea of his person and doctrine, to what is generally formed of them. And hence many learned and celebrated persons have taken upon them his defence, and written his apology.

He declares loudly, says Cicero,¹ that one cannot live joyously, except with wisdom, honesty, and justice; and that one cannot live with wisdom, honesty, and justice, otherwise than joyously. What does not such a principle include!

Upon moral subjects, and rules of duty, he advances maxims no less noble and severe. Seneca² repeats many of his sayings, which are certainly very laudable. "I was never studious of pleasing the people; for, what I know, the multitude do not approve, and what the multitude do approve, I do not know." Instead of the whole people Epicurus substitutes some man of great virtue and reputation,³ whom he is for having us set perpetually before our eyes, as our guardian and inspector, in order to our acting in all things, as if he were the eyewitness and judge of our actions.⁴ And, indeed, it were to retrench the greater part of one's faults, to give them a witness one respects; of whom the authority and idea only would make our most secret actions more prudent and blameless.

If you would make Pythocles truly rich, said Epicurus, you must add nothing to his estate, but only retrench his desires and appetites.⁵

I should never have done, should I repeat his many other maxims of morality equally just. Does Socrates himself talk better than Epicurus? And some pretend that his life suited his doctrine.

Though the gardens of Epicurus had this inscription, "Pleasure is here the supreme good," the master of them, though very courteous and polite, received his guests with bread and water.⁶ Himself, this teacher of voluptuousness, had certain days, when he satisfied his hunger with great sobriety.⁷ He says in a letter, that he did not spend quite an as, or penny, upon a meal; and that Metrodorus, his companion, who was not so old, spent a whole as. We have seen with what courage he suffered the sharpest and most cruel pains in his last moments. What can be said of these facts, and many of the like nature? for many such are related of him. What shall we say also, on the other side, of facts in great number directly the reverse, and of his being reproached with abandoning himself to drunkenness and the most shameful debauches, as Diogenes Laertius informs us?

But Cicero cuts the question short in one word, and reduces it to a single point.⁸ "Do you believe," says somebody to him, "that Epicurus was the man some are for having him pass for, and that his design was to inculcate irregularity and debauchery?" "No," replies Cicero: "for I find he also advances very fine maxims, and most severe morality. But here, not his life and manners, but his doctrine and opinions are the question. Now he explains himself upon what he understands by pleasure and happiness in a manner by no means obscure. I understand by that word, says Epicurus, the pleasures of the taste,

the pleasures of love, the view of such objects as delight the eye, diversions and music.⁹ Do I add to his words? Have I annexed any thing false to them? If so, pray correct me; for I have no view but to clear up the truth." The same Epicurus declares, "he cannot so much as conceive that there is any other good, except what consists in drinking, eating, harmonious sounds that delight the ear, and obscene pleasures."¹⁰ Aren't of these his own terms, says Cicero? *An hæc ab eo non dicuntur?*¹¹ If we suppose that he maintained such a maxim, what regard is to be had for his finest discourses elsewhere upon virtue and purity of manners? The same judgment was passed on them as on the books he wrote upon the Divinity.¹² People were convinced, that in reality he believed there were no gods. He however spoke of the veneration due to them in the most magnificent terms, in order to screen his real sentiments and person, and to avoid drawing the Athenians upon him. He had the same interest in covering so shocking a doctrine, as that which makes the supreme good consist in voluptuousness.

Torquatus urged extremely in favour of Epicurus, whose doctrine he defended,¹³ the passage where that philosopher said, that without wisdom, honesty, and justice, it was impossible to lead a happy life: *non posse jucundè vivi, nisi honestè, et sapienter et justè vivatur*. Cicero does not suffer himself to be dazzled by an empty glitter of words, with which Epicurus took pains to cover the turpitude of his maxims. He proves at large that wisdom, honesty, and justice, were irreconcilable with pleasure, in the sense that Epicurus gives it, which is a disgrace to philosophy, and a dishonour to nature itself. He asks Torquatus,¹⁴ if, when he should be elected consul, which was soon to happen, he would venture in his speech to the people or senate, to declare, that he entered upon office fully resolved to propose to himself no other view or end in all his actions but voluptuousness? And wherefore would he not venture it, except because he well knows that such language is infamous?

I shall conclude this article with a fine contrast made here by Cicero.¹⁵ On the one side he represents L. Thorius Balbus Lanuvinus, one of those men so expert and delicate in voluptuousness, that make it their business and merit to refine upon every thing which bears the name of pleasure: who, void of all chagrin for the present, and all uneasiness about the future, did not abandon himself brutally to the excesses of eating and drinking, nor to other gross diversions; but, attentive to his health and certain rules of decency, led an easy life of softness and delight, entertained a company of chosen friends every day at his house, had his table always covered with the finest and most exquisite dishes, denied himself nothing that could flatter his senses agreeably, nor any of those pleasures, without which Epicurus did not conceive how the supreme good could exist; in a word, who was industrious in culling every where, to use the expression, the quintessence of joy and delight, and whose rosy complexion argued the extraordinary fund of health and good plight which he enjoyed. This is the man, says Cicero, addressing himself to Torquatus, who according to your estimate, is supremely happy. I am afraid to name the person I design to oppose to him; but virtue itself will do it for me: it is M. Regulus, who of his own accord, with no other force than his word given the enemy, returned from Rome to Carthage, where he knew what torments were prepared for him, and where he was actually put to death by hunger and

being kept perpetually awake. It is in those very torments that virtue itself loudly declares him infinitely more happy than your Thorius on his bed of roses and wallowing in voluptuousness.¹ Regulus had commanded in great wars, had been twice consul, and received the honour of a triumph: but he deemed all those advantages nothing in comparison with this last event of his life, which his fidelity to his word and his constancy had drawn upon him: an event, of which the mere repetition afflicts and frightens us, though the reality was matter of joy and pleasure to Regulus.

Put but a Christian suffering for the truth in the place of Regulus, and nothing can be more conclusive than Cicero's reasoning. Without which it is only refuting one absurdity by another, and opposing a false idea of happiness to an infamous happiness.

SECTION II.—OPINIONS OF THE STOICS CONCERNING THE SUPREME GOOD.

WE now quit the school of least repute among the ancient philosophers for its doctrine and manners, but which however had abundance of authority, and whose dogmas were almost universally followed in practice, the attraction of pleasure being far more efficacious than the finest reasonings; and proceed to another school much extolled by the Pagan world, from which it derived much honour, and in which it pretended that virtue was taught and practised in all its purity and perfection. It is plain that I speak of the Stoics.

It was a common principle with all the philosophers, that the supreme good consisted in living according to nature: *secundum naturam vivere, summum bonum esse*.² The different manner in which they explained this conformity to nature, occasioned the diversity of their opinions. Epicurus placed it in pleasure: others in exemption from pain: and some in other objects. Zeno, the founder of the Stoics, made it consist solely in virtue. According to him, to live according to nature, in which alone happiness consists, is to live honestly and virtuously. Behold what nature inspires, to what she inclines us, honesty, decency, and virtue: and she inspires us at the same time with a supreme horror for all that is contrary to honesty, decency, and virtue. This truth is evidently seen in children, in whom we admire candour, simplicity, tenderness, gratitude, compassion, purity, and ignorance of all evil and artifice.³ Whence do they derive such excellent virtues, if not from nature herself, who paints and shows herself in infants as in a mirror? In a more advanced age,⁴ who can forget the man so much as to refuse his esteem to wise, sober, and modest youth: and with what eye, on the contrary, do we look on young persons abandoned to vice and depravity? When we read, in history, on the one side, of goodness, generosity, clemency, and gratitude; and on the other, of violence, injustice, ingratitude, and cruelty: however remote in time we

are from the persons spoken of, are we masters of our opinions, can we forbear loving the one and detesting the other? Observe, says Zeno, the voice of nature, which cries aloud, that there is no real good but virtue, no real evil but vice.

The Stoics could not reason either more justly or with apter consequence in their principles, which were however the source of their errors and mistakes. On the one side, convinced that man is made for happiness, as the ultimate end to which he is destined; and on the other, confining the whole being and duration of man to this life, and finding nothing in so short a space, more great, more estimable, and more worthy of a man than virtue; it is not to be wondered that they should place man's ultimate end and happiness in it. As they had no knowledge either of another life, or of the promises of eternity, they could not do better in the narrow sphere wherein they confined themselves through the ignorance of revelation. They rose as high as it was possible for them to rise. They were under the necessity of taking the means for the end, the way thither for being there. For want of knowing better, they took nature for their guide: they applied themselves to the consideration of it, by what it has of great and sublime, while the Epicurean considered it only by what it has of earthly, animal, and corrupt. Hence they necessarily made man's happiness to consist in virtue.

As to what regards health, riches, reputation, and the like advantages; or diseases, poverty, ignominy, and the other inconveniences of this kind: Zeno did not place them in the number either of goods or evils, nor make the happiness or misery of mankind depend upon them. He therefore maintained, that virtue alone, and of itself, sufficed to their happiness; and that all the wise, in whatsoever condition they might happen to be, were happy.⁵ He, however, set some, though small value, upon those external goods and evils, which he defined in a manner different, as to the terms, from that of other philosophers, but which at bottom came very near the same opinions. We may judge of all the rest by a single example.⁶ The other philosophers considered pain as real and solid evil, which extremely incommoded the wise man, but which he endeavoured to support with patience; which did not hinder him from being happy, but rendered his happiness less complete. Hence, according to them, a good action exempt from pain, was preferable to one united with it. The Stoics believed that such an opinion degraded and dishonoured virtue, to which all external goods joined together added no more than the stars to the lustre of the sun, a drop of water to the vast extent of the ocean, or a mite to the innumerable millions of Ceres; to use their own comparisons. A wise Stoic, therefore, reckoned pain as nothing, and however violent it might be, he was very far from calling it an evil.

Pompey, in his return from Syria, passed expressly by the way of Rhodes⁷ to see the celebrated Stoic Posidonius. When he arrived at the house of that philosopher, he forbade his licitor to strike the door with his wand, as was the custom. The person, says Pliny, to whose power the East and West were in subjection, was pleased that the *fascēs* of his licitor should pay homage to the dwelling of a philosopher.⁸ He found him in bed very ill of the gout, which tormented him cruelly. He expressed his concern to see him in that condition, and that he could not hear him as he had promised himself. That, replied the philosopher, depends upon yourself; it shall never be said that my illness occasioned so great a person to come to my house in vain. He then began a long

¹ Ego, huius quem antepanam, non audeo dicere: dicit pro me ipsa virtus, nec dubitabit isti vestro beato M. Regulum antepanone. Quem quidem, cum sua voluntate, nulla vi coactus præter fidem dederat hosti, ex patria Carthagini revertisset, ita hunc, cum vigiliis et fame cruciaretur, clamaret virtus beatiorum fuisse, quam potantem in rosa Thorium. Bella magna gesserat, bis consul fuerat, triumpharat: nec tamen sua illa superiora tam magna nec tam præclara ducebat, quam illum ultimum casum, quem propter fidem constantiamque susceperat; qui nobis miserabilis videtur audientibus, illi perpetuus erat voluptarius. *De Finib. l. ii.*

² Id indicant pueri, in quibus, ut in speculis, natura certat. — Quæ memoria est in his bene merentium! quæ referenda gratiæ cupiditas! Atque ea in optima quoque indole maximè apparent. *De Finib. l. v. n. 61.*

and grave discourse, wherein he undertook to prove, that there was nothing good but what was honest: and as he was in excessive pain all over while he spoke, he often repeated: "Pain, you do nothing; though you are troublesome, you shall never make me own you an evil."¹

Another Stoic was of a better faith.² This was Dionysius of Heraclea, Zeno's disciple, whose doctrine he had long and warmly maintained. In the torments of the stone, which made him cry out terribly, he discovered the falsehood of all he had taught in respect to pain.³ "I have devoted many years," said he, "to the study of philosophy, and cannot bear pain. Pain is therefore an evil."

It is not necessary to ask the reader's judgment of these two philosophers. The character of these false sages of the Pagan world is painted in the most lively colours, in the words and actions of the first. They exhibited themselves as spectacles, and fed themselves up with the attention of others, and the admiration which they believed they occasioned. They bore up against their inward sense through the shame of appearing weak, while they concealed their real despair under the appearance of a false tranquillity.

It must be confessed that pain is the most dreadful proof of virtue. It plunges its sharpness into the inmost soul: it racks, it torments it, without its being possible to suspend the sense of it: it keeps it in spite of it employed by a secret and deep wound, that engrosses its whole attention, and renders time insupportable to it, while every moment seems whole years. In vain does human philosophy endeavour in this condition, to make her wise man appear invulnerable and insensible: she only blows him up with vain presumption, and fills him with a force, which is indeed but cruelty. True religion does not instruct her disciples in this manner. She does not disguise virtue under fine but chimerical appearances. She raises mankind to a state of real greatness; but that is by making them discern and confess their own weaknesses.

Let us hear Job, the man put to the rudest trial that ever was. He was told by messenger after messenger, almost without any interval, that his flocks and herds were destroyed, his slaves killed or taken, and at last that all his children were crushed to death and buried under the ruins of a house where they were eating together. In the midst of so many heavy unforeseen strokes, so suddenly reiterated, and so capable of shaking a soul of the greatest fortitude, no complaint escaped him. Solely intent upon the duty of that precious moment, he submits to the decrees of providence: "Naked came I into the world, and naked shall I go out of it: the Lord gave, and the Lord hath taken away: blessed be the name of the Lord." He shows the same submission and constancy after Satan had struck him with biles all over his body, and ulcers to his very marrow, whilst he suffers the most acute pains. Does Job, in this condition, exhibit himself as a sight, or seek to attract admirers by a vain ostentation of courage? He is far from it. He confesses that his flesh is weak, and himself nothing but weakness. He does not dispute strength with God, and owns that of himself he has neither strength, counsel, nor resource. "Is my strength the strength of stones, or is my flesh of brass? Is there help in me? and is not wisdom driven quite from me?"⁴ This is not the language of Pagan philosophy, which is nothing but pride and vanity.

The Stoics made their sage a man absolutely perfect and void of passion, trouble, and defect. It was a vice with them to give the least sense of pity and compassion entrance into the heart. They deemed it the sign of a weak and even bad mind: "Misericordia est vitium pusilli animi, ad speciem alienorum malorum succidentis: itaque pessimo cuique familiarissima est."⁵ Compassion, continues the same Seneca, is a trouble and sadness of mind, occasioned by the miseries of others: now the wise man is susceptible neither of trouble nor sadness.⁶ His soul enjoys always a calm serenity, which no cloud can ever discompose.

How can he be moved with the miseries of others, when he is not moved with his own? The Stoics reasoned in this manner, because they did not know what man is. They destroyed nature, while they pretended to reform it. They reduced their sage to an idol of brass or marble, in hopes to render him firm and constant in his own misfortunes and those of others. For they were for having him equally insensible in both, and that compassion should not make him consider that as a misfortune in his neighbour, which he ought to regard as indifferent in respect to himself. They did not know, that the sentiments they strove to extinguish, were part of the nature of man, and that to root out of his heart the compassion, tenderness, and warm concern with which nature itself inspires us for what happens to our neighbour, was to destroy all the ties of human and civil society.

The chimerical idea which they formed of the supreme perfection of their wise man, was the source whence flowed the ridiculous opinion they laid down, that all faults were equal. I have shown the absurdity of that maxim elsewhere.

They maintained another no less absurd, but much more dangerous, and which was a consequence of their opinion upon what constituted the supreme good of man; a just and solid opinion in some sense, but from which they made a bad inference. They pretended, that the supreme good of man ought not to be made to consist in any of those things of which he is capable of being divested against his will, and which are not in his power; but in virtue alone, which depends solely upon himself, and of which no foreign violence can deprive him.⁷ It was very clear, that mankind could neither procure for themselves, nor preserve health, riches, and the other advantages of that nature: accordingly they implored the gods for the attainment and preservation of them. These advantages, therefore, could not compose part of the supreme good. Virtue alone had that privilege, because man is absolutely master of that, and derives it solely from himself. He gives it to himself, according to them, he preserves it himself, and has no occasion to have recourse to the gods for that, as for other good things. "Hoc quidem omnes mortales sic habent, externas commoditates—ad diis se habere: virtutem autem nemo unquam acceptam deo retulit."⁸ Never, said they, did any man take it into his head to thank the gods, that he was a good man, as he thanks them for riches, honours, and the health he enjoys. "Num quis, quod bonus vir esset, gratias diis egit unquam? at quod dives, quod honoratus, quod incolatus." In a word, it is the opinion of all men, that we ought to ask God for the goods of fortune; but as to wisdom, we derive that only from ourselves. "Judicium hoc omnium mortalium est fortunam a deo petendam, & se ipso sumendum esse sapientiam." They carried their frantic pride so high as to set their sage in this view above God; because God is virtuous and exempt from passion by the necessity of his nature, whereas their wise man is so by his own choice and will.⁹

I shall not stop here to observe to the reader, from what I have now said, and what preceded it, into what

absurdities the most esteemed and respected sect among the ancients, and indeed in some sense the most worthy of esteem and respect, gave into. Behold what human wisdom is capable of, when abandoned to its own strength and lights, or rather its own impotence and darkness.

It remains for me to relate the opinions of the Peripatetics, concerning the supreme good of man.

SECTION III.—OPINION OF THE PERIPATETICS CONCERNING THE SUPREME GOOD.

If we may believe Cicero upon this head, the difference between the Stoics and the Peripatetics upon the question of the supreme good, consists less in things than words, and that the opinions of both amounted to the same sense at bottom. He often reproaches the Stoics with having introduced rather a new language, than new doctrines, into philosophy, that they might seem to vary from those who had preceded them; which reproach appears to have sufficient foundation.

Both the one and the other agreed as to the principle, upon which the supreme good of man ought to be founded, that is, to live according, or conformably, to nature: *Secundum naturam vivere*. The Peripatetics began by examining what the nature of man is, in order to laying down their principle well. Man, said they, is composed of body and soul: such is his nature. To render him perfectly happy it is necessary to procure him all the goods both of the body and the soul: that is, to live according to nature, in which both sects agree the supreme good consists. In consequence, they reckoned health, riches, reputation, and the other advantages of that kind, in the number of goods; and in that of evils, sickness, poverty, ignominy, &c., leaving, however, an infinite distance between virtue and all other goods, and vice and all other evils. These goods which we place among those of the body, said they, make the felicity of man perfect, and render his life completely happy; but in such a manner, that he is capable of being happy, though not so entirely without them.¹

The Stoics thought very nearly the same, and gave these advantages and inconveniences of the body some weight, but they could not bear that they should be called goods and evils. If once, said they, pain were to be admitted an evil, it would follow that the wise man, when in pain, is not happy: for felicity is incompatible with a life wherein there is any evil. People do not reason so, replied the Peripatetics, in any other respect. An estate covered with fine corn in abundance does not cease to be deemed fertile, because it produces some few bad weeds. Some small losses with considerable gains, do not hinder commerce from being reckoned very advantageous. In every thing, the greater outweighs the less, and is the rule of judging. It is thus in respect to virtue. Put it into one scale, and the whole world into the other, virtue will always be infinitely the most weighty: a magnificent idea of virtue this!²

I should think it abusing the reader's patience, if I bestowed more time in refuting these subtleties, and bad chicanery of the Stoics. I only desire him to remember what I have observed from the beginning, that in this question concerning the supreme good of man, the philosophers, of whatever sect they were, considered that good only in respect to this life. The goods of eternity were either unknown, or indifferent to them.

ARTICLE II.

OPINIONS OF THE ANCIENT PHILOSOPHERS UPON THE VIRTUES AND DUTIES OF LIFE.

"THOUGH philosophy," says Cicero,⁴ "be a region wherein there are no uncultivated lands, and though

it is fertile and abundant from one end to the other, there is no part of it more rich than that which treats of the duties of life, and lays down rules and precepts for giving our manners a certain and constant tenor, and making us live according to the laws of reason and virtue." It is true that excellent maxims, and such as might make us blush, are to be found upon this head amongst the Pagans. I shall repeat some of them from Plato and Cicero, confining myself more to the thoughts than expressions of the former,

The End of Government is to make the Governed Happy, in making them Virtuous.

The first care of every man charged with the government of others, (which includes all persons in general, whose function it is to command, kings, princes, generals, ministers, governors of provinces, magistrates, judges, and fathers of families:) the first care, I say, of whoever is in any kind of authority, is to lay down well the end he ought to propose to himself in the use of that authority.⁵ What is the end of a man charged with the government of a state?⁶ It is not, says Plato in more than one place, to render it rich, opulent, and powerful; to make it abound with gold and silver; to extend its dominion far and wide; to keep up great fleets and armies in it, and thereby render it superior to all others by sea and land. It is easy to perceive that Athens is intended here. He proposes something much greater and more solid to himself; that is, to make it happy by making it virtuous; and it can only be so by sincere piety and profound submission in regard to God.

When we speak, says he elsewhere,⁷ of a happy city or republic, we do not pretend to confine that felicity only to some individuals, its principal persons, nobility and magistrates: we understand, that all the members of such city or republic are happy, each in their several conditions and degrees; and in this the essential duty of a person charged with the government of it consists. It is the same with a city or state, as with the human body.⁸ This comparison is entirely just, and abounds with consequences. The body consists of the head and the members, among which members some are more noble, more conspicuous, and more necessary than others. Can the body be said to be in health, and good condition, when the least and meanest of the members is diseased and out of order? Between all the inhabitants of a city, there is a mutual relation of wants and assistance, that forms an admirable tie of dependence among them.⁹ The prince, the magistrates, and the rich, have occasion for food, clothes, and lodging.¹⁰ What would they do, if there were not an inferior order of people to supply them with all these necessities? This providence has taken care of, says Plato, in establishing the different orders and conditions of men by the means of necessity. If all were rich, there would be neither husbandmen, masons, nor artificers: and if all poor, there would be no princes, magistrates, and generals of armies, to govern and defend the rest. It was this mutual dependence that formed states, and within the compass of the same walls assembled and united a multitude of men of different trades and occupations, all necessary to the public good, and of whom in consequence none ought to be neglected, and still less despised by him who governs. From this multiplicity of talents, conditions, trades, and employments, reduced in some measure to unity by this mutual communication and tendency to the same end, results an order, harmony, and concert of wonderful beauty, but which always supposes, that, for the perfection of the whole, it is necessary that each part should have its perfection and ornament. To return to the comparison of a city or state to the human body, the prince is as the head or soul of it;¹¹ the ministers, magistrates, generals of armies, and other officers appointed to execute his orders, are his eyes,

¹ Illa, quæ sunt à nobis bona corporis numerata, complent ea quidem beatissimam vitam, sed ita, ut sine illis possit bona vita existere. *De Finib. l. v. n. 71.*

² *De Finib. l. v. n. 91, 92.*

⁸ *De Repub. l. ii. p. 369, 374. 11 Ib. l. ii. p. 961-964.*

arms, and feet. It is the prince who is to animate them, put them in motion, and direct their actions. The head is the seat of the understanding; and it is the understanding that regulates the use of the senses, moves the members, and is watchful for their preservation, well-being, and health. Plato uses here the comparison of a pilot, in whose head alone lies the knowledge of steering the vessel, and to whose ability the safety of all on board is confided. How happy is a state, whose prince speaks and acts in this manner!

Whoever is charged with the care of others, ought to be firmly convinced, that he is designed for inferiors, and not inferiors for him.

To be convinced of this principle, we have only, in my opinion, to consult good sense, right reason, and even common experience. It, however, seldom happens that superiors are truly convinced of it, and make it the rule of their conduct. Plato,¹ to set this principle in full light, begins by introducing one Thrasymachus into the dialogue, who pleads the cause, or rather makes the apology, of a corrupt government. This man pretends, that in every government, that ought to be considered as just, which is for the advantage of the government: that he who commands, and is in office, is not so for others, but for himself: that his will ought to be the rule of all under him; that if strict justice were to be observed, superiors of all men were the most to be pitied, having for their lot only the cares and anxieties of government, without being in a condition to advance their families, serve their friends, or comply with any recommendation, as they would be bound to act in all things according to the principles of exact and severe justice. There are few, or rather none, who talk in this manner: but too many reduce it to practice, and make it the rule of their conduct. Plato refutes at large all this wretched reasoning, and, according to his custom, makes use of comparisons taken from the common usages of life: I shall content myself here with the following single proof, to show that those who command are designed for their inferiors, and not their inferiors for those who command. A pilot takes upon himself the care of a ship with a great number of persons on board, whom different views and interests induce to go to a foreign country. Did it ever enter into the thoughts of any reasonable man to imagine, that the passengers were for the pilot, and not the pilot for the passengers? Would any one venture to say, that the sick whom a physician takes care of are for him? And is it not evident that physicians, as well as the art of physic, are intended solely for restoring health to the sick? Princes are often represented by the ancients under the idea of ποιμένες λαόν, *the shepherds of the people*. The shepherd is certainly for his flock, and nobody is so unreasonable to pretend, that the flock is for the shepherd.

It is from this doctrine of Plato, that the Roman orator borrowed the important maxim, which he strongly inculcates on Quintus Cicero, his brother, in the admirable letter wherein he gives him advice for his good conduct in the government of Asia, which had been confided to his care. "As for me," says he, "I am convinced that the sole end and attention of those in authority ought to be, to render all under them as happy as possible.—And not only," adds he, "those who govern citizens and allies, but whoever has the care of slaves, and even of beasts, ought to procure them all the good and convenience they can, and make their advantage their whole care."²

The natural consequence of this principle, that all superiors, without exception, are established for the

good of those under them, is that their sole view in the use of their power and authority ought to be the public good.³ Hence also it follows, that only persons of worth should have great employments; that they should even enter upon them against their will; and that it should be necessary to use a kind of violence to oblige them to accept such offices. And indeed places, wherein nothing is to be seen but pains, labour, and difficulty, are not so desirable as to be sought or solicited. However, says Plato, nothing is more common in our days than to make interest for posts, and to pretend to the highest employments, without any other merit, than an ambition that knows no bounds, and a blind esteem for one's self: and this abuse it is, that occasions the misfortunes of states and kingdoms and terminates at length in their ruin.

Justice and the faith of engagements are the foundations of society. Sanctity of oaths.

The firmest tie of society is justice, and the foundation of justice is fidelity to engagements, which faith consists in the inviolable observance of promises given, and treaties made.⁴

Injustice can assume only two different forms, of which the one resembles the fox, and is that of artifice and fraud; and the other the lion, which is that of violence.⁵ Both the one and the other are equally unworthy of man, and contrary to his nature: but the most odious and detestable is that of fraud and perfidy, especially when it covers the blackest practices with the appearance of probity.

All kinds of fraud and artifice should be banished from the intercourse of mankind, with that malignant cunning of address,⁶ that covers and adorns itself with the name of prudence, but which in reality is infinitely remote from it, and suits only double-dealing, dark, knavish, malicious, artificial, perfidious people: for all these odious and detestable names scarce suffice to express the character of such as renounce sincerity and truth, in the intercourse of life.⁷ By what name then must we call those, who make a jest of the sanctity of oaths, which are solemn and religious affirmations, made in the presence, and before the eyes of God, whom we call to witness to them,⁸ whom we render in some measure the guarantee for their truth, and who will undoubtedly avenge the sacrilegious abuse of his name? The regard due to the divinity, could not, according to Plato,⁹ be carried too far in this respect. It was from this principle he desired that, in trials wherein only temporal interests were concerned, the judges should not require any oath from the parties, in order that they might not be tempted to take false ones, as it happens, says he, with more than half those who are obliged to swear; it being very uncommon and difficult for a man, when his estate, reputation, or life are at stake, to have so great a reverence for the name of God, as not to venture to take it in vain. This delicacy is remarkable in a Pagan, and well worthy our serious reflection. Plato goes still farther. He declares,¹⁰ that not only to swear slightly, and without any important reason, but to use the name of God in familiar discourse and conversation, is to dishonour and to be wanting in the respect due to the divine Majesty. He would therefore have been far from reproving a custom, now very common even among persons of worth, of calling frequently upon the name of God, when nothing less is in question than religion.

Different duties of civil life. Fine maxims upon virtue.

Every one ought to consider the common good as the great end of his actions.¹¹ For should men know

no good but private interest, and be for engrossing every thing to themselves, no kind of society could subsist among them. Every thing upon earth was created for the use of man, and men themselves were formed for one another, and for the aid of each other by reciprocal services. Hence we are not to believe, that we were born only for ourselves. Our country, our fathers, mothers, and friends, have a right to whatever we are, and it is our duty to procure them all the advantages in our power.

It is upon these principles of our duty to justice and society, that the Stoics determine many questions of moral philosophy in a manner, that condemns many Christian casuists.

At the time of a famine, a merchant arrives first in a port laden with corn, followed by many others with the same freight.¹ Ought he to declare, that the rest will soon be there; or is it allowable for him to be silent about them, in order to make the better market for himself? The decision is, that he ought to declare it; because so the good of human society for which he is born requires.—A man receives bad money in payments.² May he give it to others for good, knowing it to be counterfeit? He cannot, as an honest man.—Another sells an ingot of gold, taking it for brass.³ Is the buyer obliged to tell the seller that it is gold, or may he take advantage of the other's ignorance, and buy that for a crown which is perhaps worth a thousand? He cannot in conscience.

It is an indisputable maxim, says Plato, which ought to serve as a foundation for the whole conduct of civil life: that it is never allowable to hurt any one, nor consequently to return evil for evil, injury for injury, or a take revenge of our enemies, and to make the same misfortunes fall upon them, which they have made us to suffer.⁴ And this is what reason teaches us. But the Pagans are not steady upon this refined point of morality. "He is a good man," says Cicero, "who does all the good in his power, and hurts nobody unless provoked by injury." *Virum bonum esse, qui prosit quibus possit; nocet nemini, nisi lacessitus injuria.*⁵

One of the laws of Plato's commonwealth is, that money should never be lent with usury.⁶ The goods of another are never to be appropriated to one's own use. "If I had found a treasure," says Plato, "I would not touch it, though the augurs upon being consulted should assure me that I might apply it to my own use. That treasure in our coffers, is not of so much value as the progress we make in virtue and justice, when we have the courage to despise it. Besides, if we appropriate it to our own use, it is a source of curses to our family." He judges in the same manner of a thing found in one's way.⁷

All other good things without virtue, ought to be regarded as real evils.⁸ And this virtue is neither the gift of nature, the fruit of study, nor the growth of human wit, but an inestimable blessing, which God confers on whom he pleases.⁹

Contrast between a good man under a load of evils, and a wicked man in the highest affluence and good fortune.

Plato supposes two men, very different in the world's thoughts and treatment of them. The one consummately wicked, without either faith, probity, or honour, but wearing the mask of all these virtues; the other a perfectly good man, (according to the idea of the Pagans) who has no thoughts but to be, not to seem, just. The first, for the attainment of his ends, spares neither fraud, injustice, nor calumny, and reckons the greatest crimes as nothing, provided he can but conceal them.¹⁰ With an appearance of religion,

he affects to adore the gods with pomp and splendour, offering presents and sacrifices to them in greater number, and with more magnificence than any body. By this means deceiving the dim sight of men, that cannot pierce into the heart, he succeeds in heaping up riches, honours, esteem, reputation, powerful establishments, and multiplying advantageous marriages for himself and his children; in a word, whatever the most splendid fortune includes of most soothing and beneficial. The second, in a supreme degree the good man, simple, modest, reserved, solely intent upon his duty, inviolably attached to justice, far from being honoured and rewarded as he would deserve, (in which case, says Plato, it could not be discerned whether virtue itself, or the honours and rewards consequent upon it, were his motives) is universally in disgrace, blackened with the most odious calumnies, looked upon as the vilest of wretches, abandoned to the most cruel and ignominious treatment, "thrown into prison, scourged, wounded, and at last nailed to the cross;" while he chooses rather to undergo the most cruel torments, than to renounce justice and innocence.¹¹ Is there any one, cries Cicero, so stupid as to hesitate one moment, which of these two he would rather choose to resemble?

We are surprised to find sentiments so noble, so exalted, and so conformable to right reason and justice, among the Pagans. We should remember, that notwithstanding the general corruption and darkness which had overspread the Pagan world, the light of the eternal Word did not fail to shine out to a certain degree in their minds: "and the light shineth in darkness."¹² It is that light, which discovers and makes known to them various truths, and the principles of the law of nature. It is that light, which writes it in their hearts, and gives them the discernment of many things just and unjust: which makes St. Augustine¹³ say, "Let the wicked see in the book of the light, in what manner they ought to live." Now when we see in Greece crowds of learned men, a people of philosophers, who succeed one another during four entire ages; who employ themselves solely in inquiring after truth; who, most of them, for succeeding the better therein, renounce their fortunes, country, settlement, and all other employments except that of applying to the study of wisdom: can we believe so singular and unexampled an event, which never happened in any other part or time of the world, the effect of chance, and that Providence had neither any share in it, nor intended it for any end? It had not destined the philosophers to reform the errors of mankind. Those great men disputed four hundred years almost without agreeing upon, and concluding any thing. None of their schools undertook to prove the unity of the Godhead, none of them ever so much as thought of advancing the necessity of a Mediator. But how useful were their moral precepts upon the virtues and duties, in preventing the inundation of vice? What horrid disorders had taken place, had the Epicureans been the prevailing and only sect? How much did their inquiries contribute to the preservation of the important doctrines of the distinction between matter and mind, of the immortality of the soul, and the existence of a Supreme Being? Many of them had admirable principles upon all these points, "which God had made known unto the

¹⁰ Quanto, si duo sint, quorum alter optimus vir, equissi-

preferable to so many other people whom he left in barbarity and ignorance.

As this knowledge of theirs, and the virtuous actions consequent upon it, may be considered under a double point of view, it ought also to produce two quite different effects in us. If we consider it as an emanation of that eternal light, "which shineth even in darkness," who can doubt whether or not it be worthy of our esteem and admiration? But if we consider it in the principle from whence it proceeded, and the abuse made of it by the Pagans, it cannot be praised without reserve and exception. It is by the same rule we are to judge of all that we read in profane history. The most shining actions of virtue which it relates, are always infinitely remote from pure and real virtue, because not directed to their principle, and having their root in cupidity, or pride and self-love. *Radicata est cupiditas: species potest esse bonorum factorum, verè opera bona esse non possunt.*¹ The root is not judged by the branches, but the branches by the root. The blossoms and even fruit may seem like; but their root is highly different. *Noli attendere quod floret foris, sed qua radix est interna.* Not what these actions have of real, but what is defective in them, ought to be condemned. It is not what they want, that makes them vicious. And what they want is charity, that inestimable gift, of which the want cannot be supplied by any other, and which is not to be found out of the Christian church and the true religion. Accordingly we see, that none of the Pagans, who in other respects, have laid down very fine rules of duty between man and man, have made the love of God the fundamental principle of their morality: none of them have taught the necessity of directing the actions of human probity to Him. They knew the branches, but not the stem and trunk of moral perfection.

ARTICLE III.

OF JURISPRUDENCE, OR THE CIVIL LAW.

I ANNEX the knowledge of the law to moral philosophy, of which it is a part, or at least to which it has a great relation. It is a subject of great extent, but I shall treat it very succinctly. The memoirs with which an able professor of law, Mr. Lorry, one of my very good friends, has supplied me, have been of great use to me.

By the knowledge of the law, I mean the knowledge of right, of laws in general. Every people have had their particular laws and legislators. Moses is the most ancient of them all: God himself dictated the laws it was his will that his people should observe. Mercurius Trismegistus among the Egyptians, Minos among the inhabitants of the island of Crete, Pythagoras among the cities of Great Greece, Charondas and Zaleucus in the same country, Lycurgus at Sparta, and Draco and Solon at Athens, are the most celebrated legislators of Pagan antiquity. As I have spoken of them with sufficient extent in the course of this history, I proceed directly to the Romans.

The beginnings of the Roman civil law were confined. Under the kings, Rome had only a small number of laws, which were proposed at first by the senate, and afterwards confirmed in the assembly of the people. Papirius, who lived in the time of Tarcinius Priscus, was the first who collected the laws made by the kings into one body. That collection was called from the name of its author, *Jus Papirianum*, the *Papirian law*.

The commonwealth, after having abolished the power of kings, retained their laws for some time: but they were afterwards expressly abolished by the Tribunitian law, in hatred to the name of kings. From that time it used an uncertain kind of Right till the twelve tables, which were prepared by the Decemviri, and composed out of the laws of Athens and the principal cities of Greece, into which deputies had been sent to collect such as they should judge the wisest and best adapted to a republican government. These laws were the foundation and source of the

whole Roman civil law:² and Cicero is not afraid to prefer them to all the writings and books of the philosophers, as well in respect to the weight of their authority, as the extent of the utility deducible from them.³

The brevity, and at the same time the severity, of the law of the twelve tables, made way for the interpretation of the learned, and the prætor's edicts. The first employed themselves in explaining their spirit and intention: the second in softening their rigour, and supplying what might have been omitted.

The laws, in process of time, having multiplied greatly, the study of them became absolutely necessary, and at the same time very difficult. Persons of birth, capacity, learning, and love for the public good, distinguished by the name of civilians, applied wholly to this study. The young Romans, who designed to open themselves a way to the great offices of the commonwealth by the talent of eloquence, which was the first step to them, went to the houses of these civilians in order to acquire their first knowledge of the law, without which it was not possible for them to succeed at the bar. Private persons in all their affairs had recourse to them, and their houses were regarded as the oracles of the whole city, whence answers were brought which determined doubts, calmed disquiets, and directed the methods it was necessary to take in the prosecution of all suits.⁴ These answers were no more than opinions, which might inform the judges, but imposed no necessity upon them of following them. Augustus was the first who gave them more authority, in appointing civilians himself, who were no longer limited to serve as counsel to individuals, but were held the emperor's officers. From that period, their opinions, reduced to writing, and sealed with the public authority, had the force of laws, to which the emperors obliged the judges to conform. These civilians published various works under different titles, which have contributed exceedingly towards reducing the knowledge of the civil law into art and method.

These laws, in their turn, multiplied extremely, and made way for doubts and difficulties by contradictions, supposed or real. In such cases recourse was had to the prince, who gave the solution of them. He adjudged also by decrees the causes referred to him by appeal, and answered by rescripts all the consultations addressed to him by petition or memorial. And thence partly came the Constitutions of the Emperors, so full of wisdom and equity, from which the body of the Roman or civil law has been formed.

To form these decisions with the greater maturity, they called in the assistance of the most learned civilians, and did not give their answers, till after having concerted them well with all the persons in the empire who were best versed in the laws and rights of the public.

I shall say a few words in this place upon the most celebrated civil lawyers of the latter times.

Papinian (*Æmilius*) was held in great estimation by the emperor Severus, whom he had succeeded in the office of fiscal advocate. He was looked upon as the asylum of the laws, and the repository of the whole knowledge of them. The emperor Valentinian III. raised him above all the civilians, in ordaining by his law of the 7th of November 426,⁵ that when they were divided upon any point, they should follow the opinion espoused by that eminent genius, as he calls him. And, indeed, Cujas⁶ judges him to be the most profound civilian that ever was, or ever

⁶ Cuj. in Cod. Th.

will be. The emperor Severus, being willing to raise his great merit to equal dignity, made him *præfectus prætorio*, of which one of the principal functions was to judge causes jointly with the emperor, or in his name. Papinian, to acquit himself the better in that office, took Pautus and Ulpian for his counsellors and judges assistant, whose names are also very famous among the civilians.

Severus, at his death, left two sons, Caracalla and Geta. Though they had both the name, Dion¹ assures us that only Caracalla had the power of emperor, who soon rid himself of his colleague in the most cruel and barbarous manner conceivable; for he caused him to be assassinated in the arms of their common mother, and, according to some, killed him with his own hands.

Caracalla murdered all whom his brother had loved, and who had either served or retained to him, without distinction of age, sex, or quality; and Dion says, that he began with twenty thousand of his domestics and soldiers.² To mention or write the name of Geta sufficed for being immediately butchered; so that the poets dared not use it even in comedies, where it was commonly given to slaves.

Papinian could not escape his cruelty. It is said, that Caracalla would have obliged him to compose a discourse to excuse the death of Geta either to the senate or people, and that he generously replied: "It is not so easy to excuse, as to commit parricide;" and, "to accuse an innocent person, after having deprived him of his life, is a second parricide." He remembered, without doubt, that Seneca had been very much blamed, for having composed a letter for Nero to the senate, to justify the assassination of his mother.³ The son of Papinian, who was then questor, and had three days before exhibited magnificent games, was also killed.

Fabius Sabinus. The emperor Heliogabalus (A. D. 221,) having ordered a centurion to go and kill Sabinus, that officer, who was a little deaf, believed that he had bade him make Sabinus quit the city. The centurion's error saved the life of Sabinus, who passed for the Cato of his times. The emperor Alexander, who succeeded Heliogabalus, A. D. 222, placed him in the number of those next his person, and whose counsel he took for governing wisely.

Ulpian (*Domitius Ulpianus*) descended originally from the city of Tyre. He had been counsellor, and judge assistant to Papinian, in the time of Severus. When Alexander came to the empire, he placed him near his person, in quality of counsellor of state, and to take care of all things referred to his judgment,⁴ which employment is evidently that since called great referendary. He afterwards made him *præfectus prætorio*.

Lampridius,⁵ places him at the head of those wise, learned, and faithful persons, who composed Alexander's council, and assures us that prince paid him greater deference than any body else, upon account of his extraordinary love of justice; that he conversed only with him in private; that he looked upon him as his tutor; and that he proved an excellent emperor, from making great use of Ulpian's counsels in the government of the empire.

As Ulpian endeavoured to re-establish discipline amongst the prætorian soldiers, they rose against him, and demanded his death of Alexander. Instead of granting their request, he often covered him with his purple robe, to defend him against the effects of their fury. At length, having attacked him in the night, he was obliged to fly to the palace to implore the aid of Alexander and Mammæa. But all the awe of the imperial authority could not save him, and he was killed by the soldiers even in the sight of Alexander. Several of Ulpian's works are still extant.

Paulus (*Julius Paulus*) was of Padua, where his statue is still to be seen.⁶ He was nominated consul under Alexander, and then *præfectus prætorio*. He, as well as Sabinus and Ulpian, was of the council

formed by Mammæa the mother, and Massa the grand mother, of Alexander, to administer the public affairs during the minority of that prince. Every body knows the great services they did, and the reputation they acquired him. The Roman empire had at that time every thing that could render a state happy, a very good prince, and excellent ministers: for the one is of small utility without the other; and perhaps it is even more dangerous to the people, to have a prince good of himself, but who suffers himself to be deceived by bad men, than to have one more wicked, who however inspects into the conduct of his officers, and obliges them to do their duty. Alexander always set great value upon the merit of Paulus, who is said to have written more than any other civilian.

Pomponius was also of Alexander's court and council. How happy was this reign! As he lived to the age of seventy-eight, he composed a great number of works. Among the rest, he made a collection of all the famous civilians down to the time of the emperor Julian.

Modestinus (*Herennius*) lived also in the reign of Alexander, who raised him to the consulship. He, as well as the four preceding lawyers, was Papinian's disciple, whose care formed them all in the knowledge of the civil law. What services does a single man sometimes render a state by his learning and pupils!

Tribonian was of Pamphilia. He was honoured with the first employments at Constantinople by the emperor Justinian. It was under that prince, and by his care, that the civil law took a new form, and was reduced into an order, that still exists, and will for ever do him honour.

Before him, there were many *Codes*, which were either compiled from, or abridgments of, the Roman laws. Gregorius and Hermogenes, two civilians, made a collection of laws, which from their names was called *The Gregorian and Hermogenian Code*. It was a collection of the Constitutions of the emperors, from Adrian down to Dioclesian and Maximin in 306. This work was of no use, for want of authority to cause it to be observed. The emperor Theodosius the younger was the first who composed a *Code* in sixteen books, consisting of the Constitutions of the emperors from Constantine the Great down to him; and he abrogated all laws not comprised in this system. This is called *the Theodosian Code*, and was published in 438. And lastly, the emperor Justinian, seeing the authority of the Roman law much weakened in the West, from the decline of the empire, resolved to cause the whole body of the Roman law to be compiled anew. He charged Tribonian with this commission, who called in the aid of the most learned civilians then in being. He chose the finest of the Imperial Constitutions from Adrian down to his own time, and published this new Code in 529.

He afterwards undertook a new work by order of the emperor: this was to extract the best decisions from the two thousand volumes of the ancient civilians, and to reduce them into one body, which was published in 533, under the name of *the Digest*. The emperor gave this collection the force of law by the letter which he placed in front of the work, and which serves it for a preface. It is called also *the Pandect*. The Digest consists of fifty books. The same year appeared the *Institutes* of Justinian, a book which contains the elements and principles of the Roman or civil law. The year following, that is to say in 534, the emperor made some alterations in his first Code, which he abolished, and substituted a new one in its stead, to which alone he gave the authority of law. And lastly, after this revival, Justinian published a hundred and sixty-five constitutions, and thirteen edicts, which are called *Novelle*, the *Novels*, either because they make a considerable change in the ancient law; or, according to Cujas, because they were made upon new cases, and compiled after the revival of the Code by the order of that emperor. Most of the *Novels* were written in Greek, and were translated into Latin.

The body of the civil law therefore consists of four parts, the Code, the Digest, the Institutes and the

⁵ Cæsariani.

⁶ Scriniorum magister.

⁷ Ibid.

Novels. By the *Civil Law*, the Institutes understand the laws peculiar to each city or people. But at present it is properly the Roman law, contained in the Institutes, the Digest, and the Code. It is otherwise called the *Written Law*.

From all that I have now said may be seen, what services a prince may render his people, who applies himself seriously to the cares of government, and who is well convinced of the extent and importance of his duties. Justinian had been very successful in the wars he had undertaken, and had the wisdom to ascribe that success neither to the number of his troops, the courage of his soldiers, the experience of his generals, nor his own talents and abilities; but solely to the protection with which God had vouchsafed to favour his arms.¹ But, had he contented himself with his military glory, he would have thought, that he had only half discharged the functions of sovereignty, which was principally established for rendering justice to the people in the name and place of God himself. Accordingly he declares expressly in a public edict, that the Imperial Majesty ought not to be adorned with arms only, but armed also with laws, for the good government of the people, as well in peace as in war.²

After, therefore, having restored peace to the provinces of the empire as a warrior, he turned his thoughts to the regulation of its polity as a legislator, by instituting a universal body of law, to serve as the rule of all tribunals: a work which had been much the object of the wishes of his predecessors, as he observes in more than one place, but which seemed attended with so many difficulties that they had always believed it impracticable. He surmounted them all with a constancy, that nothing was capable of discouraging. For succeeding in this important enterprise he employed all the most learned civilians in the whole extent of the empire, presiding himself in the work, and revising exactly all they composed.³ Far from ascribing the honour of it to himself, as is usual enough, he does them all justice; he mentions them with praises, he extols their erudition, he treats them almost as his colleagues, and recommends it as a duty, to thank the Divine Providence for having supplied him with such aids, and for having honoured his reign by the composition of a work so long desired, and so useful and necessary for the due administration of justice. An emperor, of less zeal for the public good, and less liberality, than Justinian, would have left all those civilians in obscurity and inaction. How many excellent talents of all kinds remain buried, for want of patrons to produce them! The learned are not wanting to princes, but princes to the learned. The great qualities and actions of Justinian would have recommended him for ever to the veneration of mankind, if his conduct in respect to ecclesiastical affairs had not sullied his glory.

I shall conclude this article upon the knowledge of civil law, with some extracts from laws, that may give the reader an idea of the beauty and solidity of the different institutions of which I have been speaking.

"Digna vox est majestate regnantis, legibus alligatum se Principem profiteri: adeo de auctoritate juris nostra pendet auctoritas. Et, re vera, majus imperio est submittere legibus principatum; et oraculo presentis Edicti, quod nobis licere non patimur, aliis indicamus." "It is worthy of the majesty of a prince to declare himself bound and limited by the laws: so much does our authority depend on right and justice. And, indeed, to submit the sovereign

power to the laws, is greater than to exercise it: therefore we are well satisfied to make known to others by the present edict, what we do not think lawful for us to do." It is an emperor, master of almost the universe, who speaks thus, and who is not afraid of hurting his authority, by declaring the just bounds by which it is limited.

"Rescripta contra jus elicta, ab omnibus Judicibus refutari precipimus; nisi forte sit aliquid, quod non lædatur alium, et prosit petenti, vel crimen supplicanti indulgeat." "We ordain, that no judge shall have any regard to rescripts obtained from us contrary to justice, unless they tend towards granting some grace to petitioners not to the hurt of others or towards remitting some punishment to supplicants." It is very uncommon for princes either to own that they have deceived themselves, or been deceived by others, and to retract in consequence what they have once decreed. Nothing, however, does them more honour than such an acknowledgment, as we see in the example of Artaxerxes, who publicly revoked the unjust decree he had been misled into passing against the Jews.

"Scire leges, non hoc est verba earum tenere, sed vim ac potestatem." "To know the laws, is not only to understand the words of which they are composed, but their force and efficacy."

"Non dubium est in legem committere eum, qui verba legis amplexus, contra legis nititur voluntatem, nec pœnas insertas legibus evitabit, qui se contra juris sententiam æva prærogativa verborum fraudulentè excusat." "It is not to be doubted, but that he acts contrary to the law, who, confining himself to the letter, acts contrary to the spirit and intent of it; and whoever, to excuse himself, endeavours fraudulently to elude the true sense of a law by a rigorous attachment to the words of it, shall not escape its penalties by such prevarication."

"Nulla juris ratio, aut equitatis benignitas patitur, ut, quæ salubriter pro utilitate hominum introducuntur, ea nos duriori interpretatione contra ipsorum commodum producimus ad severitatem." "It is contrary to all justice and equity, that those things which have been wisely instituted for the good of mankind, should be wrested to their prejudice by a mistaken severity and a too rigid interpretation."

"Observandum est jus reddenti, ut, in adiendo quidem facilem se præbeat, sed contemni non patitur." Unde mandatis adjicitur, ne in ulteriorem familiaritatem provinciales admittant: nam ex conversatione æquali contemptio dignitatis nascitur. Sed et incog noscendo, neque exandescere adversus eos quos malos putat; neque precibus calamitosorum illachrymari oportet. Id enim non est constantis et recti Judicis, cujus animi motum vultus detegit; et summam ita jus reddi debet, ut auctoritatem dignitatis ingenio suo augeat." "The person who administers justice ought indeed to be easy of access, but should not suffer himself to be despised by making himself too cheap. Hence it is, that in the instructions given to provincial governors and magistrates, it is recommended to them, not to admit the people of their provinces into too great a degree of familiarity, because conversing as equals induces contempt of dignity. In rendering justice, he ought also neither to express great indignation against such as he believes criminal, nor suffer himself to be softened too much by the prayers of the unfortunate. For it does not become the constancy and gravity of an upright judge, to discover the sentiments of his heart in his countenance: in a word, he ought to dispense justice in such a manner, as to exalt the authority of his office by the wisdom and moderation of his conduct."

"Quæ sub conditione jurijurandi relinquuntur, à Prætoribus reprobantur." Providit enim is qui sub jurijurandi conditione quid accipit, aut omitendo conditionem perderet hereditatem legatuvæ, aut cogeretur turpiter, accipiendo conditionem, jurare. Voluit ergo eum, cui sub jurijurandi conditione quid relictum est, ita capere, ut capiant hi, quibus nullus talis jurijurandi conditio inseritur: et rectè. Cùm

¹ Ita nostros animos Dei omnipotentis erigimus adiutorum, ut neque armis confidamus, neque nostris militibus, neque bellorum ducibus, vel nostro ingenio; sed omnem spem ad solam referamus summam providentiam trinitatis. *Epist. ad Trebon.*

² Imperatoriam majestatem non solum armis decoratam, sed etiam legibus oportet esse armatam, ut strumque tempus, et bellorum et pacis, rectè possit gubernari. *Epist. ad Euphram legum juventutem.*

³ Nostra quoque majestas semper investigando et perscrutando ea quæ ab his componebantur, quicquid dubium et incertum inveniebatur, emendabat, et in competentem locum redigebat. *Epist. ad senat. et omnes populos*

entia faciles sint nonnulli hominum ad jurandum contemptu religionis, alii perquam timidi metu divini Numinis usque ad superstitionem: ne vel hi, vel illi, aut consequerentur, aut perderent quod relictum est, Prætor consultissimè intervenit." The tendency of this law is admirable. It dispenses with a person's taking an oath, to whom an estate or legacy has been left upon condition of taking such oath; and ordains, that he shall enjoy such estate or legacy, as if such condition had not been inserted, lest it should occasion him either to swear contrary to his conscience, or to renounce his right through an over-scrupulous, or superstitious delicacy of conscience. It were to be wished, that the spirit of this law should occasion the number of useless oaths to be abolished, which had custom has introduced into all the trading societies and companies of France.

"Advocati, qui dirimunt ambigua fata causarum, suæque defensionis viribus in rebus sepe publicis ac privatis lapsa erigunt, fatigata reparant, non minus provident humano generi, quàm si preliis atque vulneribus patriam parentesque salvarent. Nec enim solos nostro imperio militare credimus illos, qui gladiis, clypeis, et thoracibus nituntur, sed etiam advocatos. Militant namque patroni causarum, qui gloriose vocis confisi munimine, laborantium spem, vitam, ac posteros defendunt." "Advocates, who terminate causes, of which the events are always uncertain, and who by the force of their eloquence, whether in respect to the public, which often happens, or private persons, reinstate ruinous affairs, render no less service to mankind, than if they defended their country and parents in battle at the expense of their blood and wounds. For we rank in the number of those who fight for our empire, not only such as act for it with sword, harness, and shield, but those also who lend our subjects the noble aid of eloquence, in defence of their lives, interests, and posterity."

It is with reason that the prince bestows such fine praises on a profession, which makes so salutary a use of the talents of the mind, and that he equals it with whatever is greatest in the state. But at the same time he recommends to advocates the exercise of so illustrious a profession with a noble disinterestedness, and not to disgrace it by a base devotion to sordid interest. "Ut non ad turpe compendium stitumque deformem hæc arripiatur occasio, sed laudis per eam augmenta querantur. Nam si lucro pecunieque capiantur, veluti objecti atque degeneres inter vilissimos numerabuntur." He also exhorts them not to abandon themselves to the inhuman itch and pleasure of bitter raillery and gross invective, which only lessen the weight of the advocate's discourse in the esteem of his hearers; but to confine themselves strictly to what the necessity and success of causes require. "Ante omnia autem universi advocati ita præbeant patrocinia jurgantibus, ut non ultra quàm litium poscit utilitas, in licentiam convitiandi ac maledicendi temeritate prorumpant. Agant quod causa desiderat, temperent ab injuria. Nam si quis adeo procax fuerit, ut non ratione sed probris putet esse certandum, opinionis suæ imminutionem patietur."

CHAPTER III.

OPINIONS OF THE ANCIENT PHILOSOPHERS CONCERNING THE METAPHYSICS AND PHYSICS.

I HAVE already observed that the Metaphysics were included in the Physics of the ancients. I shall examine four points in them. The existence and attributes of the Divinity; the formation of the world; the nature of the soul; and the effects of nature.

ARTICLE I.

OF THE EXISTENCE AND ATTRIBUTES OF THE DIVINITY.

THE opinions of the ancient philosophers concerning the Divinity may be reduced to three principal points or questions. 1. Whether the Divinity exists? 2. What is his nature? 3. Whether he presides over the government of the world, and makes the affairs of mankind his care?

Before I enter into the chaos of philosophical opin-

ions, it will not be improper to explain in few words the state of the belief of the whole world in respect to the Divinity, as the philosophers found it, when they first began to introduce their maxims upon this point by the sole method of reasoning; and to slight the common and popular belief of all the nations of the universe, even to the most barbarous, which had supported itself in a constant and uniform manner by tradition alone.

Before the philosophers, the whole world agreed in believing in a Supreme Being, omnipresent, and attentive to the prayers of all who invoked his name in whatsoever condition they might be, in the midst of deserts, in the violence of storms at sea, and in the gloom of dungeons; so good as to concern himself for the misfortunes of men, with power to deliver them out of them, the dispenser of victory, success, abundance, and every kind of prosperity: the arbiter of the seasons, and of the fecundity of man and beast: presiding at the conventions and treaties made either between kings or private persons: receiving their oaths, exacting the execution, and punishing with inexorable severity the least violation of them: giving or taking away courage, presence of mind, expedients, good counsel, and attention and docility to wise advice: protecting the innocent, the weak, and the injured, and declaring himself the avenger of oppression, violence, and injustice: judging kings and nations, deciding their lot and destiny, and assigning with absolute power the extent and duration of kingdoms and empires. Such were part of the thoughts which men generally had of the Divinity, even in the midst of the darkness of paganism, which may serve as a summary of the ideas they had derived from a universal and perpetual tradition, undoubtedly as ancient as the world, upon this head. That this is true, we have incontestable proofs in the poems of Homer, the most venerable monument of Pagan antiquity, and which may be considered as the archives of the religion of those remote times.

SECTION I.—OF THE EXISTENCE OF THE DIVINITY.

THE philosophers were much divided concerning different points of philosophy, but they all agreed in respect to the existence of the Divinity, except a very small number, of whom I shall soon speak. Though these philosophers, by their inquiries and disputes, added nothing fundamentally to what all nations believed before them upon this head, those inquiries and disputes cannot, however, be said to have been useless. They served to confirm mankind in their ancient belief, and to obviate the pernicious subtleties of those, who would attack it. The union of so many persons generally esteemed for the solidity of their sense, their indefatigable application to study, and the vast extent of their knowledge, added new weight to the common and anciently received opinion concerning the existence of the Divinity. The philosophers supported this opinion with many proofs, some more subtle and abstract, and others more popular and obvious to the understanding of the vulgar. I shall content myself with pointing out some few of the latter kind.

The constant and general concurrence of men of all ages and countries in the firm belief of the existence of the Divinity, seemed to them an argument to which it was impossible to object any thing with sense or reason. The opinions that have no other foundation but vulgar error and credulous prejudice, may indeed continue for some time, and prevail in certain countries: but sooner or later they give way, and lose all belief. Epicurus¹ founded the proof of

¹ Epicurus solus vidit primum esse deos, quod in omnium animis eorum notionem impressisset ipsa natura. Quos etenim gens, aut quod gens hominum, quod non habet sine doctrina antiquitatem quandam deorum? quam appollat *ἑκατόν* Epicurus, id est anteciptam animo quandam informationem, sine qua nec intelligi quidquam, nec queri, nec disputari possit—cùm ergo non institutio aliqua, aut more, aut lege sit opinio constituta, maneatque ad unum omnium firma consensus, intelligi necesse est esse deos: quoniam sentias eorum, vel potius sentias cognitiones habere

the existence of the gods, upon nature's having stamped the idea of them on every mind. Without the idea of a thing, said he, we can neither conceive, speak of, nor dispute about it. Now what people, what kind of men, have not an idea, a notion of gods, independently of all learning? That is not an opinion derived from education, custom, or any human law; but the firm and unanimous belief of all mankind: it is therefore from notions implanted in our souls, or rather innate, that we conceive there are gods. Now, all judgments of nature, when universal, are necessarily true.

Another argument, which the philosophers more frequently used, because evident to the most simple, is the contemplation of nature. The least practised in reasoning may at a single view discover Him, who paints himself in all his works. The wisdom and power he has shown in all he has done, show themselves, as in a glass, to such as cannot contemplate him in his proper idea. This is an obvious and popular philosophy of which every man void of passion and prejudice is capable. The heavens, earth, stars, plants, animals, our bodies, our minds, all argue a mind superior to us that exists as the soul of the whole world. When we consider with some attention the frame and architecture of the universe, and the just proportion of all its parts, we discover at the first glance the traces of the divinity, or, in better terms, the seal of God himself impressed upon all things called the works of nature. "Can one," said Balbus,¹ in the name of the Stoics, "behold heaven, and contemplate what passes there, without discerning with all possible evidence, that it is governed by a supreme divine intelligence? Whoever should doubt it, might as well doubt whether there be a sun. The former is more visible than the latter. This conviction, without the evidence that attends it, would never have been so fixed and permanent: it would not have acquired new force by length of time; it would not have been able to resist the torrent of years, and to have passed through all ages down to us." "If there be," said Chrysippus,² "things in the universe, that the wit, reason, strength, and power of man, are not capable of effecting, the Being that produces them is certainly better than man. Now, man could not form the heavens, nor any thing of what we see invariably regular. There is, however, nothing better than man, because he alone possesses reason, which is the most excellent thing he can possess. In consequence, the Being that made the universe is better than man. Wherefore then should we not say, that Being is a God?" To what blindness, or more properly, to what excess of stupidity must men have been abandoned, who could choose to attribute such stupendous and inconceivable effects to mere chance, and a fortuitous concurrence of atoms, rather than to the infinite wisdom and power of God? "Is it not amazing," cries Balbus,³ in speaking of Democritus, "that there ever should be a man, who could persuade himself, that certain solid and individual bodies set themselves in motion by their natural weight, and that from their fortuitous concurrence a world of such great beauty was formed? Whoever believes this possible, might as well believe, that if a great number of characters of gold, or any other substances, representing the twenty-one letters,⁴ were thrown upon the ground, they might fall disposed in such order, as to form the annals of Ennius legibly." The same thing may be said of Homer's Iliad. Who could believe, says the Archbishop of Cambray, in his admirable treatise upon the existence of God, that a poem so perfect was not

composed by the efforts of a great poet's genius but that the characters of the alphabet having been thrown in confusion, a cast of mere chance, like one of dice, disposed all the letters exactly in the order necessary for describing so many great events in verses full of harmony and variety; for placing and connecting them all so well together; for painting each object in the most graceful, most noble, and most affecting colours conceivable; and, lastly, for making each person speak according to his character in so natural and pathetic a manner? Let a man reason and subtilize ever so long, he will never persuade a person of sense, that the Iliad had no other author but chance. Wherefore then should this man of sense believe of the universe, which, without doubt, is still more wonderful than the Iliad, what his reason would never permit him to believe of that poem?

In this manner all the most famous sects explained themselves. Some philosophers, as I have said before, but very few, undertook to distinguish themselves from the rest by peculiar opinions upon this subject. Abandoned to the feeble force of reason, in their attempts to fathom the nature and essence of the Divinity, and to explain his attributes, and without doubt dazzled with the lustre of an object, of which the human eye cannot sustain the radiance, they lost themselves in their inquiries, and from doubting at first the existence of the Divinity, proceeded so far by degrees as to deny it. But the people, who did not enter into these philosophical subtilties and refinements, and adhered solely to immemorial tradition, and the natural notion implanted in the hearts of all men, rose up vigorously against these teachers of atheism, and treated them as the enemies of mankind.

PROTAGORAS⁵ having begun one of his books with these words: "I neither know whether there are gods, nor what they are;" the Athenians banished him not only from their city, but their territory, and caused his works to be publicly burned.

DIAGORAS did not confine himself to doubting; he plainly denied that there were gods; which occasioned his being surnamed the *Atheist*. He lived in the 91st Olympiad, A. M. 3588. It is said that the fondness of an author, and excessive tenderness for one of his productions, drew him into impiety.⁶ He had prosecuted a poet for stealing a composition of his in verse. The latter swore he had robbed him of nothing; and soon after published that work in his own name, which acquired him great reputation. Diagoras seeing his adversary's crime not only unpunished, but honoured and rewarded, concluded that there was no providence and no gods, and wrote books to prove it. The Athenians cited him to give an account of his doctrine; but he fled, upon which they set a price upon his head. They caused a talent (about 150*l.* sterling) to be promised by sound of trumpet, to whoever should kill him, and two to such as should bring him alive, and caused that decree to be engraven upon a pillar of brass.

THEODORAS of Cyrene denied also the existence of gods without restriction, A. M. 3684.⁷ He would have been brought to the tribunal of the Areopagus, if Demetrius Phalereus, who at that time ruled every thing at Athens, had not favoured his escape. His moral tenets were worthy of an Atheist. He taught that all things are indifferent, and that there is nothing in its own nature either vice or virtue. His impiety drew him into trouble wherever he went, and he was at last condemned to poison himself.

The just severity of the Athenians, who punished even doubting upon this head, as we have seen in the case of Protagoras, highly contributed to put a stop to the licentiousness of opinions, and the progress of impiety.⁸ The Stoics carried their respect for religion so far in this point, that they treated the custom of disputing against the existence of the gods as criminal and impious, whether it was done seriously, or

De quo autem omnium natura consentit, id verum esse negasse est. ¹ C. l. i. n. 43, 44.

⁵ The President Bouhier, in his learned dissertation, *De prisca Græcor. et Lat. litera*, printed at the end of Montfaucon's *Antiquities*, has shown, that the ancient Romans had only these sixteen letters: A, B, C, D, E, F, I, K, L, M, N, O, P, R, S, T. The five others, added in the time of Cæsar, were G, Q, U, X, Z, without reckoning H, which was one letter than a note of aspiration.

merely for the sake of conversation, and against one's opinion.¹

SECTION II.—OF THE NATURE OF THE DIVINITY.

A BRIEF enumeration of all the chimeras advanced by the philosophers upon this subject, will convince us better than any other arguments of the incapacity of human reason to attain to such sublime truths by its own strength. I shall extract this detail from Cicero's books upon the *nature of the gods*. The remarks and reflections with which the Abbé Olivet of the French Academy has interspersed his excellent translation of these books of Cicero, will be great helps to me, and I shall scarce do more than copy and abridge them.

As the ancient philosophers studied the nature of the gods only with relation to sensible things, whose origin and formation they endeavoured to comprehend, and as the different manners in which they disposed the system of the universe, occasioned their different beliefs concerning the Divinity, we must not be surprised to find these two subjects often united and confounded in this place.

THALES of Miletus said, "That water was the principle of all things, and that God is that intelligence, by whom all things are formed out of water."² He spoke of an intelligence, that making only one whole with matter, directed its operations; in the same manner as the soul, which united with the body makes only one and the same man, is said to direct the actions of man.

ANAXIMANDER believed, "That the gods receive being, that they are born and die at remote periods of time, and that they are innumerable worlds." These gods of Anaximander were the stars.³

ANAXIMENES affirmed, "That the air is god, that it is produced, that it is immense and infinite, and that it is always in motion."⁴ This opinion of Anaximenes, at bottom, differs in nothing from those that precede it. He retained the idea of a sole, and infinitely extended, substance from his master Anaximander: but he called it air, as Thales had called it water.

ANAXAGORAS, the pupil of Anaximenes, was the author of this opinion, "That the system and order of the universe were to be attributed to the power and wisdom of an infinite mind."⁵ Anaxagoras lived only in an age after Thales. The notions of philosophy began to clear up. The necessity of an efficient cause, substantially distinct from the material one, was perceived. But to this infinite mind he attributes only the order and motion, not the creation, of the universe. The co-eternity of the two principles independent of each other, as to their existence, is the rock, on which he with all the ancient philosophers split.

PYTHAGORAS believed, "That God is a soul diffused throughout all the beings of nature, and from which the souls of men are derived."⁶ Virgil has admirably described the doctrine of this philosopher,—

Esse apibus partem divini mentis, et haustus
Ætheris dixere deum nantque ire per omnes
Terræque, tractusque maris, cœlumque profundum.
Hinc pecudes, arborea, virgo, genus omne ferarum
Quemque sibi tenues nascertem arcescere vitas.

Georg. l. iv.

Pythagoras lived at least fifty years before Anaxagoras. The latter, therefore, is not the first who had the idea of a pure spirit; or Pythagoras must be said to have confounded it with matter.

XENOPHANES said, "That God is an infinite whole, to which he adds an intelligence."⁷ The same philosopher says elsewhere, "That God is an eternal substance—and of a round figure," by which he understands the world.⁸ He, therefore, believed this God material.

PARMENIDES did not differ in his opinions with his

master Xenophanes, though he expressed himself in different terms.⁹

EMPEDOCLES. According to him, "The four elements, of which he affirms all things to be composed, are divine," that is to say, gods.¹⁰ It is, however, manifest, that they are mixed, that they have a beginning and perish, and that they are void of thought.

DEMOCRITUS "gives the quality of gods as well to the images of sensible objects, as to nature which supplies these images, and to our knowledge and understanding."¹¹ What he called gods were atoms. To speak properly, he believed nothing. "I deny," said he, "that we either know any thing, or nothing. I deny that we know even whether we know that."¹² I deny that we know whether any thing exists, or whether nothing exists." A worthy member of the Eleatic sect, whose favourite maxim was the *Acatalepsy*, or the absolute incomprehensibility of all things. This sect, which acknowledged Xenophanes for its founder, formed the unbelieving Protagoras, and gave birth to that of Pyrrho.

PLATO. It appears from all his works, that he had very just thoughts of the Divinity, but that he was afraid to explain himself freely in a city, and at a time, wherein it was dangerous to clash with the prevailing opinions. In the *Timæus* he says, "that the Father of the world could not be named;" and in his books of *Legibus*, "that we should not be curious to know properly what God is."¹³ He supposes him incorporeal. He attributes the formation of the universe to him:¹⁴ *Opifice medicatoreque mundi*. He says also, "that the world, the heavens, the stars, the earth, souls, and those to whom the religion of our forefathers ascribes Divinity; all this," he says, "is God."¹⁵ Plato's opinion at bottom, notwithstanding the appearance of Polytheism is, that there is but one most good and most perfect God, who made all things according to the idea of the best work possible.

ANTISTHENES says, "That there are many gods adored by the nations of the earth, but that there is but one natural God," that is to say, as Lactantius explains it, author of all nature.¹⁶

ARISTOTLE differs exceedingly with himself. Sometimes he affirms that the whole Divinity resides in intelligence,¹⁷ that is to say, in the intelligent principle, by which all thinking beings think. Sometimes, that the world is God. He afterwards discovers some other being, who is above the world, and who takes care to direct and preserve its motion. He elsewhere teaches that God is nothing else, but the fire that shines in the heavens.

XENOCRATES says, "that there are eight gods. The planets are five of them, and all the fixed stars together so many scattered members of the same body, make but one. The sun is the seventh; and last of all, the moon the eighth."¹⁸

THEOPHRASTUS in one passage attributes supreme Divinity to intelligence; in another to the heavens in general; and afterwards to the planets in particular.¹⁹

STRATO says, "that there is no other God but nature: and that nature is the principle of all productions and all mutations."²⁰

ZENO, the founder of the famous sect of the Stoics. We ought to expect something great concerning the Divinity from him. The following is the sum of his theology, extracted principally from Cicero's second book *De Natura Deorum*, in which his opinions are explained with great extent:—That the four elements alone compose the whole universe: that these four elements make but one continued nature, without division: that absolutely no other substance exists besides these four elements: that the source of intelligence, and of all souls, is the fire united in the ether, where its purity suffers no alteration, because the other elements do not mingle with it: that this intelli-

gence, active, vital fire penetrates the whole universe: that as intelligence is its property distinctly from the other elements, it is deemed to operate all things: that it proceeds methodically to generation, that is to say, it produces all things, not blindly and by chance, but according to certain rules always the same: that being the soul of the universe, it causes it to subsist, and governs it with wisdom, because it is the principle of all wisdom: that consequently it is God: that he gives the same denomination to Nature, with which it is one and the same, and to the Universe, of which it is part: that the sun, moon, and all the stars, as they are bodies of fire, are gods: that all things, wherein any singular efficacy resides, and wherein this active principle manifests itself clearly, deserve the name of divinities: that the same title ought also to be given to great men, in whose souls this divine fire brightens with uncommon lustre: and lastly, that in whatsoever manner this soul of the universe is represented to us, and whatever names custom has given it in respect to the different parts it animates, religious worship is due to it.

I am tired with repeating so many absurdities, and the reader no doubt as much as me, if he has had patience enough to read them to the end. He ought not to expect to see living lights shine out from the darkness of paganism, upon a subject so infinitely superior to the weakness of human intellect, as the nature of the Divinity. The philosophers might indeed, by the pure strength of reason, have convinced themselves of the necessity and existence of a divine Being. Some of them, however, as Epicurus, have been suspected of concealing real atheism under the veil of specious words: at least they dishonoured the Divinity almost as much by the mean ideas they conceived of him, as they would have done, had they absolutely denied him.¹ As to what regards the essence of the divine nature, they were all widely mistaken. And how should it have been otherwise, as men know no more of God, than he is pleased to reveal to them? The Abbé Olivet, in his dissertation upon the theology of the philosophers, reduces their sentiments to three general systems, which include all the particular opinions given us by Cicero in his books upon the nature of the gods. The different manner in which these philosophers disposed the system of the universe, occasioned their different beliefs concerning the Divinity.

Some of them believed, that mere matter alone, without thought or reason, was capable of forming the world: whether one of the elements produced all the rest by different degrees of rarefaction and condensation, as it appears Anaximenes believed; or that matter, being divided into an infinity of moving corpuscles, those corpuscles assumed regular forms in consequence of fluttering accidentally to and fro in the void, as Epicurus believed; or that all the parts of matter had an intrinsic gravity, which gave them a necessary direction, according to Strato's opinion. Now, the atheism of these philosophers is manifestly of the greatest kind, because they acknowledge no other first cause but inanimate matter.

Others rose to this notion; that the order of the world was too exquisite not to be the effect of an Intelligent Cause.² But not conceiving any thing immaterial, they believed Intelligence a part of matter, and ascribed that perfection to the fire of the ether, which they considered as the ocean of all souls. This was the opinion of the Stoics; with whom may be joined Thales, and even Pythagoras, Xenophanes, Parmenides, and Democritus, who admitted, as well as they, an universal intelligent matter.

And, lastly, others comprehended, that intelligence could not be material, and that it was necessary to distinguish it absolutely from whatever is corporeal. But at the same time they believed, that bodies existed independently of that intelligence, and that its power extended no farther than to dispose them into order, and to animate them. This was the opinion

of Anaxagoras and Plato: an opinion much less imperfect than that of the others, as it includes the idea of spirit, and really distinguishes the cause from the effect, the agent from matter; but still infinitely remote from truth.

As to the two other classes of philosophers, who admitted no principles but such as were material, they are absolutely inexcusable, and differ only in their blindness, as being more or less blind. What we read in the book of Wisdom may be well applied to them:—"Vain are all men by nature, who are ignorant of God, and could not out of the good things that are seen, know him that is: neither by considering the works, did they acknowledge the Workmaster. But deemed either fire, or wind, or the swift air, or the circle of the stars, or the violent water, or the light of heaven, to be the gods which govern the world."³

I speak here only of the gods peculiarly acknowledged as such by the philosophers. Varro distinguished three kinds of theologies. The fabulous, which was that of the poets: the natural, taught by the philosophers: and the civil or political, which was that established by the state, and in use among the people.⁴ The first and the last either ascribed, or suffered to be ascribed to the gods, all the passions and vices of men, and the most abominable crimes. The second seemed less void of reason, but at bottom was scarce any thing more religious, and included absurdities that disgrace human understanding.

Cicero⁵, in his third book upon the nature of the gods, sets all these absurdities in their full light. He did not know enough to establish true religion; but he knew enough to refute the Stoics and Epicureans, the only persons that rose up against St. Paul, when he preached at Athens. The mere light of nature might suffice him for subverting falsehood, but could not guide him to the discovery of the truth. We here discern the weakness of human reason, and the vain efforts that it makes alone, to raise itself up to the exact knowledge of a God truly hidden, and who dwells in inaccessible light.⁶ What progress in this respect has this proud reason been capable of making, during above four ages, in the best heads of Greece, in the most illustrious of the pagans for their learning, and the chiefs of their most famous schools? There is nothing so absurd, that has not been advanced by some philosopher.⁷

And farther. Such of them as professed a higher degree of wisdom, and to whom God had manifested his unity, did they not keep this knowledge a secret through an ungrateful and abject cowardice? Did one of them rise up against the impiety which had substituted mute idols, and figures not only of men, but of beasts and reptiles, to the true and living God? Did one of them refrain from going to the temples, though he did not approve in his heart of the superstitious worship, which he authorized by his presence and example?⁸ The only one, whose religion was put to the trial, did he not treat those, who accused him of not adoring the gods worshipped by the Athenians, as false accusers?⁹ His apologist,¹⁰ who was also his disciple and friend, does he defend him in any other manner, than by affirming that he always acknowledged the same divinities as the people? And is not Plato himself obliged to own, that this mean prevaricator ordered an impious sacrifice, even when certain of immediate death? A small extract from one of Plato's letters¹¹ shows us how much he was

afraid to explain himself upon the nature and unity of God, and in consequence how far he was from rendering him thanks, from confessing him before men, and from exposing himself to the least danger in bearing witness of him. The shameful actions attributed to the false gods made him blush: but he contented himself with saying, that either they were not guilty of those crimes, or were not gods if they had committed them; without daring to say, that there was but one God, and without having the courage to rise up against the public worship, founded upon the very crimes he considered with horror.¹

It must be said, to the shame of paganism, and the glory of the gospel, that a child among us, with the least instruction in the catechism, is more certain and more knowing in respect to every thing necessary for us to know of the Divinity, than all the philosophers together.

SECTION III.—WHETHER THE DIVINITY PRESIDES OVER THE GOVERNMENT OF THE WORLD? WHETHER MANKIND BE HIS PECULIAR CARE?

The dispute of the ancient philosophers concerning providence was, whether the gods presided in the government of the world in general, and whether they descended to a particular care of every individual of mankind. Epicurus was almost the only one who denied this truth.

"It is asked,"² said he, "in what manner do the gods live, and how do they employ themselves? Their life is the most happy, and the most delicious imaginable. A god does nothing: he disturbs himself with no kind of care: he undertakes nothing. His wisdom and virtue form his joy. The pleasures he tastes, pleasures that can admit of no increase, he is sure of enjoying for ever." "This," continues he, addressing himself to Balbus, who sustained the opinion of the Stoics, "this is a happy god. But as for yours, he is overwhelmed with cares and labour. For, if you believe that this god is the world itself, turning incessantly as it does round the axis of the heavens, and that too with surprising rapidity, is it possible for him to have a moment's rest?"³ Now, without rest, there is no felicity. To pretend that there is a God in the world who governs it, who presides over the course of the stars, and the revolutions of the seasons, who regulates and disposes all things, who has his eye upon the land and sea, who makes the lives of men his concern, and who provides for their wants; all this is certainly giving him very severe and laborious employments.⁴ Now, to be happy, according to us, it is necessary to possess tranquillity of mind, and to be entirely at leisure. Besides, you set an eternal master over our heads, of whom we are to be day and night continually in dread.⁵ For how is it possible not to fear a God who foresees all things, whose thoughts extend to all things, who observes all things, who believes all things relate to him, who interferes in all things, and who is never without employment?" The great maxim of Epicurus was, therefore, "That a happy and immortal being had neither any thing to do himself, nor occasioned employment for others."⁶ So impious a doctrine, which openly denies providence, deserved an Epicurus for its advocate and defender. And it must be owned, that what he says of a god who sees and knows all things, and who in consequence must punish whatever is contrary to the law of heaven, is the sole reason which to this day induces some persons to believe there is no providence that watches over all the actions of man, or rather to desire it.

"It is not without reason that this doctrine occasioned Epicurus to be considered as a declared ene-

my of the gods, who undermined all religion, and who by his reasonings, as Xerxes by his troops, levelled their temples and altars."⁷ "For, after all, what reason," says Cotta, "should oblige us to have any thoughts of the gods, since they have none of us, and absolutely neither take care of, nor do, any thing.—To be bound to express piety for them, would it not be necessary to have received graces from them? For wherein is a person obliged to those who have done nothing for him? Piety is a justice paid by man to the gods. Now, as your gods have no relation to us, what can they require from us?"

The prayers made to the Divinity in distress and danger, the vows made to him for the attainment of certain graces, the promises and oaths of which he is taken for witness, uses common to all nations and practised in all times, show that mankind had always Providence in their thoughts. To consult only our own reason, such as sin has left it, that is to say, our pride and darkness, we should be tempted to believe that it is not treating the Divinity with sufficient respect to make him descend thus to little circumstances, in representing to him all our wants; to stipulate conditions with him, if he vouchsafes to hear them; and to make him intervene in our transactions and engagements. God has thought fit by these different methods to preserve in the minds of all people a clear idea of his providence, of the care he takes of all mankind in particular, of the supreme authority that he retains over all the events of their lives, of his attention in examining whether they have faithfully kept their promises, and of the punishment he will inflict for the violation of them. And indeed we see that these truths have always been considered as the firmest foundations of human society. "Abore all," says Cicero, in laying down rules for a wise government, "we ought to be fully convinced, that the gods are the supreme lords and rulers of all things: that whatever passes in the universe, is directed by their will and power: that they delight in doing good to mankind: that they attentively examine what every one is, what he thinks, how he acts, and with what piety, and what sentiments, he practises the duties of religion: and lastly, that they make a great difference between the good and the wicked."⁸

This passage shows us, that the Pagans not only attributed the universal government of the world to the Divinity,⁹ but were convinced, that he descended to the most minute particulars, and that not any of mankind, not an action, or even a thought, escaped his attention and knowledge. The Epicureans could not support the idea of a God so near, so attentive to them, and of such piercing sight. He is supremely happy, said they, and consequently enjoys infinite tranquillity. He is void of anger and passion. Every thing is indifferent to him, except repose. This is what persons abandoned to their pleasures are still fond of persuading themselves, in order to avoid the importunate reproaches of conscience. They are willing to allow in God a general care of his creatures, and a goodness like that of princes, who govern their dominions with wisdom, but who do not enter into particulars, nor descend to love their subjects, and distinguish any of them by their peculiar regard. David did not think in this manner. "The Lord looketh from heaven: he beholdeth all the sons of men. From the place of his habitation, he looketh upon all the inhabitants of the earth. He fashioneth their hearts alike: he considereth all their works."¹⁰ In beholding all mankind from heaven, he does not examine them with a general and confused view.¹¹ Every individual is as present to him as if he were

attentive to no other object. He does not see him as from a great distance, but as immediately before his eyes. He does not consider only his outside, but penetrates into whatever is most secret and retired within him. He does not only interrogate his heart, but dwells in it, and is more present and intimate there, than the heart itself. In the infinite multitude of men, that have been, and now are, nothing escapes either his sight or his remembrance. This knowledge and attention, which are as incomprehensible as his being, are natural effects of his being the Creator of all things, and of the heart as well as all the rest. "Who fashioneth their hearts,—who considereth all their works."

ARTICLE II.

OF THE FORMATION OF THE WORLD.

I SHALL not tire the reader a second time with a particular account in this place of the various systems of the ancient philosophers concerning the formation of the world, which vary infinitely, and are some more absurd than others. I shall scarce speak of any of them, except those of the Stoics and Epicureans, whose systems upon this subject are most known and celebrated. It is not my design to enter very deeply into them, but to give only a general idea of them.

SECTION I.—SYSTEM OF THE STOICS CONCERNING THE FORMATION OF THE WORLD.

ACCORDING to the Stoics, the intelligent part of nature only set the material and nonintelligent part of it in motion, which as well as itself had existed from all eternity. This appears very clearly from one passage of Cicero, not to mention many more. To obviate and remove the objections, that might be made against Providence, in respect to several things either useless or pernicious, with which the world abounds, the Stoics replied: "Nature has made the best use she could of the elements that existed."¹ Could the pre-existence of matter be more expressly implied? Aristotle,² and many other philosophers, were also of the same opinion. What the Stoics called "the soul of the world,"³ was that intelligence, that reason, which they believed diffused throughout nature. And what was this intelligent, sensitive, rational principle? Why, nothing but the ethereal fire which penetrates all bodies: or rather, nothing but mechanical laws, which they ascribed principally to the celestial fire, and according to which every thing was formed, and every thing acted necessarily. Accordingly Zeno defined nature, "a fire of subtle art, which proceeded methodically to generation."⁴ For he believed the action of creating and generating peculiar to art. Cicero uses the term create in this place, which might give reason to believe, that he knew and admitted the action of producing out of nothing, which is creation in the strict sense of the term. But he uses the same word in many other places to express a simple production; and none of his works give the least room to believe, that he had so singular a notion, as that of creation properly so called.⁵ As much may be said of all the ancients who have treated the physics, as Cicero expressly shows: *Erit aliquid quod ex nihilo oriatur, aut in nihilum subito occidat? Quis hoc physicus dixit unquam?*⁶ It was a received principle with all the philosophers, that matter neither could be produced from, nor reduced to, nothing.

⁷ Lib. 2. de Divinit.

De nihilo nihil, in nihilum ni posse reverti.

Pers. Sat. 3.

Epicurus in express terms denies this power to the Divinity:

Nullam rem è nihilo gigni divinitus unquam.

Lactantius,⁷ has preserved a fragment of Cicero's books *De Natura Deorum*, which cannot be applied with certainty to the system of the Stoics: because, as it is detached, it does not entirely appear of which sect of philosophers it is to be understood. However, it seems very proper to explain what they thought concerning the formation of the world. I shall insert it here at length. "It is not probable," say the speaker, "that matter, from which all things derived their origin, was itself formed by the divine Providence; but rather, that it has, and always had an intrinsic and natural force, which renders all its modifications possible to it."⁸ "As a workman, therefore, when he works upon a building, does not produce the matter for it himself, but uses that which he finds ready made; and as he who forms a figure of wax finds the wax produced to his hand: so the divine Providence must have had a matter, not that it had produced itself, but which it found in a manner at hand," and prepared for its designs. "That if God did not produce the first matter, it cannot be said that he produced either earth, air, fire, or water."

The comparison of the architect and the statuary is entirely proper for explaining the system of the Stoics. Their god, (whom Cicero calls the divine Providence in this place,) and which is only the ether, as we have observed, did not create, or produce the matter of which the world is formed out of nothing; but he modified it, and, in disposing the parts of matter, before in confusion, he made earth, air, water, and that gross fire which we know: that is to say, he gave them the form and disposition in which we see them.

The workman, says Lactantius in the passage I have just cited, cannot build without wood, because he is not capable of producing it of himself; and of that he is incapable because he is man, or weakness itself.⁹ But God produces all that he pleases out of nothing, because he is God, or power itself, that knows neither measure nor bounds. For if he is not omnipotent, he is not God.

SECTION II.—SYSTEM OF THE EPICUREANS CONCERNING THE FORMATION OF THE WORLD.

IN the system of the Epicureans (and the Stoics were of the same opinion in this point) these two words, *world* and *universe*, had a different signification.¹⁰ By the world they understood the heavens and the earth, and all they contained; and by the universe, not only the heavens and the earth with all they contain, but also the infinite void, which they supposed beyond the world. For they believed the world full and limited, (or a limited plenum); but they supposed it surrounded on all sides with an infinite, and absolutely void, space. Accordingly they divided all nature, the whole universe, into two parts bodies and space, or void.¹¹

⁷ Lact. Div. Instit. l. ii. c. 8.

⁸ Non est probabilè, eam materiam rerum, unde orta sunt omnia, esse divina providentia effectam; sed habere et habuisse vim et naturam suam. Ut igitur faber, cum quid edificaturus est, non ipse facit materiam, sed ea utitur quæ sit parata, fictorque item cæra: sic isti providentia divini materiam præsto esse oportuit, non quam ipse faceret, sed quam haberet paratam. Quid si non est à Deo materia facta, ne terra quidem, et aqua, et aer, et ignis à Deo factus est.

⁹ Faber sine ligno nihil edificabit, quia lignum ipsum facere non potest: non posse autem, imbecillitatis est humane. Deus vero facit sibi ipse materiam, quia potest: posse enim, Dei est: nam, si non potest, Deus non est. Homo facit ex eo quod est, quia per mortalitatem impeditur est; per impeditur, definitur ac modicæ potestatis. Deus autem facit ex eo quod non est, quia per immortalitatem fortis est, per fortitudinem potestatis immensus, quod sine ac modo caret sibi via factoris. *Lactant. ibid.* c. 10.

¹⁰ Plut. de Placit. Philos. l. ii. c. 1.

¹¹ Putat quæ omnia Naturæ nomine appellent, ut Epicurus qui ita dividit: Omnia, quæ secundum Naturam, esse Corpora et Ignea. *2. De Nat. Deor.* n. 89.

Omnis ut est Igitur per se Natura duobus
Consistit rebus, quæ Corpora sunt et Inane.

Lucret. l. ii.

This distinction is necessary for understanding the system of the Epicureans. For they supposed, as a certain principle, that without the *vacuum*, there could not have been any motion or even production in the world.

Quæ, si non esset Inane,
Non tam sollicito motu privata carerent,
Quam genita omnino nulla ratione fuisset:
Unde materies quoniam stipata fuisset.—*Id. l. i.*

According to the Epicureans, the fortuitous concurrence of atoms formed the world.

Atom is a Greek word, which signifies indivisible. It is a corpuscle of every kind of figure, from numbers of which all other bodies are formed. Atoms are not objects of the senses, through their extreme smallness, which makes them imperceptible.

Moschus the Phœnician, Leucippus, and Democritus, were the first philosophers who advanced the doctrine of atoms.¹ They suppose that of these little corpuscles, some are smooth, some rough, some round, some angular, and others curved, and in a manner hooked; and that heaven and earth were formed by the fortuitous concurrence of these atoms.

But Epicurus particularly insisted upon this doctrine, which he placed in honour, introducing however some alterations in it, by which Cicero affirms, that he only spoiled the doctrine of Democritus, instead of correcting and improving it.²

Democritus places atoms in an infinite space, without either middle or extremities.³ There, in motion from all eternity, they unite and adhere to each other, and by such meeting and concurrence, form the world as we see it. Cicero cannot bear that a philosopher, in explaining the formation of the world, should speak only of the material, without saying a word of the efficient cause. And indeed, what an absurdity is it to suppose, that certain solid and indivisible bodies move of themselves from all eternity by their natural weight! This Democritus holds as well as Epicurus: for the latter also gave his atoms a natural and intrinsic activity, which sufficed to put them in motion: but he differed from the former in other points.

Epicurus, pretends, indeed, that atoms tend of themselves directly downwards, which motion he says is that of all bodies.⁴ Afterwards coming to reflect, that, if all atoms tended continually downwards in a direct line, and by a perpendicular motion, it would never be possible for one of them to touch another, he subtly imagined a declination or obliquity in their motion, by the means of which the atoms striking against each other, blend and hook themselves together, and form the world, with all the parts that compose it. Thus, by a mere fiction, he gives them, at the same time a slight declination or obliquity of motion, without alleging any cause for it, which is shameful to a natural philosopher; and deprives them also without any cause of the direct motion downwards, which he had advanced as the law or tendency of all bodies. However, with all the suppositions he invents, he does not effect what he pretends. For if all atoms have an equal declination or obliquity of motion, they will never adhere to each other. And if some have it, and not others, to give these a direct, and those an oblique, motion, is giving them different employments upon trust and at a venture. With all this, it would not cease to be impossible for such a fortuitous clash or concurrence of atoms ever to produce the order and beauty of the universe. "If the fortuitous concurrence of atoms," says Cicero, elsewhere,⁵ "is capable of forming the world, why will it not as well form a portico, a temple, a house, or

a city; works of much less difficulty? To reason in so absurd a manner, one would think, that these philosophers had never once looked up towards the heavens, nor beheld all their wondrous and various beauties."⁶

The doctrine of void had induced Epicurus, as well as some other philosophers, to suppose a plurality of worlds, formed, as well as this we inhabit, by the fortuitous concurrence of atoms.

Quare etiam atque etiam tales fatcare necesse est,
Esse alios alibi congressus materiai,
Qualis hic est, avido complexu quem tenet æther.

Lucret. l. ii.

Gassendi considers this opinion as contrary not only to the holy Scriptures, which mention no plurality of worlds, and seem to suppose only one, but also to that of the greatest philosophers, as Thales, Pythagoras, Empedocles, Anaxagoras, Plato, Aristotle, Zeno the Stoic, and many others. He owns however it cannot be demonstrated, that there are not other worlds besides this, because it is in the power of God to create as many as he pleases: but that it would be contrary to reason, to affirm actually that there are more, because God has not revealed that to us.

SECTION III.—PLATO'S FINE THOUGHT OF THE FORMATION OF THE WORLD.

I DO NOT undertake to examine what Plato's opinions were concerning the formation of the world, which would require great discussion. He sometimes calls matter eternal; by which he does not understand that it subsisted visibly from all eternity, but that it subsisted intellectually in the eternal idea of God. This is what he means, when he says, "the exemplar or model of the world is from all eternity."⁷

Some lines before he has the thought of which I speak in this place: "God considering his work, and finding it perfectly conformable to his idea and original, rejoiced, and in some measure applauded himself."⁸ What Plato says here, that God formed the world according to the exemplar he had conceived of it in himself, is very remarkable. As a skilful workman has the whole disposition and form of his work in his head before he begins it, and works according to those ideas, so that what he executes may be said to be only a copy of the original he has before imagined, every work that subsists, being pure imitation; in like manner God, in creating the world, only executed the idea he had conceived of it from all eternity. For the world, and all that it contains, existed intellectually in God, before it existed really in nature. These are Plato's ideas, which he might very possibly have extracted from the Scriptures,⁹ where we find that God gives Moses models of all the works, it is his will that prophets should execute. What is said in Genesis of God's first approbation of his works as they came from his hands, and afterwards of them all in general, when he had finished them, might more immediately have supplied Plato with that sublime idea of the eternal exemplars upon which the world was formed. For these words, "and God saw every thing that he had made: and behold it was very good,"¹⁰ signify, as the new interpreter of Genesis observes, "that God considering all his works at one view, and comparing them with each other, and with the eternal model of which they are the expression, found their beauty and perfection most excellent."¹¹

In the little I have now said of Plato's opinions concerning the formation of the world, may be seen how much he rose upon the physical principles, which he might before have taken from Heraclitus.

The design of God, in setting before our eyes the infinite wonders of the world, was to make us discern,

¹ Ista flagitia Democriti, sive etiam antè Leucippi, esse corporeis quædam lævia, alia aspera, rotunda alia partim autem angulata, curvata quedam et quasi adunca: ex his effectum esse cælum atque terram, nulla cogente natura, sed concursu quodam fortuito. *De Nat. Deor. l. i. n. 66.*

⁶ Certo ita temerè de mundo effutunt, ut mihi quidem nunquam hunc admirabilem cælum ornatum, qui locus est proximus, suspexisse videantur.

⁷ Τὸ παρὰ τοῦ θεοῦ, πάντα αἰῶνα ἰστίῃ ἔν. *Plat. in Timæo, p. 38.*

⁸ Ἡγάσθη τὴν καὶ εὐφρανθεὶς τὴν δὲ μάλλινον θροῖνον πρὸς τὸ παρὰ τοῦ θεοῦ ἰστίῃ ἔν. *Ibid. p. 37.*

⁹ Some have believed, that he had seen them during his travels.

¹⁰ *Gen. l. 21*

¹¹ *Mr. du Goet.*

in the motion of all the parts of the universe, their relation to each other, and the concert between them, Him who has created, and who governs them. He has every where placed footsteps of himself. He has concealed and veiled himself under the objects of nature; but these objects are so beautiful and grand, that they reveal the wisdom which formed, and directs them in a thousand different manners. How therefore could it possibly happen, that men considered as the sole sages of the earth, should be so blind and stupid as to attribute such wonderful effects to chance, destiny, matter, and the simple combination of the laws of motion, without God's having any other part in them than to obey those laws? What is the intellect of man abandoned to its own darkness? The first words in the most ancient book in the world reveal to us this great truth: "In the beginning God created the heaven and the earth." These few words fix plainly, by the authority of revelation, all the doubts, and dispel all the difficulties, which so long perplexed the philosophers upon one of the most essential points of religion. They were not capable of knowing it perhaps with entire certainty by the sole light of reason, but they at least might and ought to have had some idea of it. For either God must necessarily have created the heavens, the earth, and mankind; or they must have been eternal, which is far more inconceivable. Can a rational and unprejudiced mind ever be convinced in earnest, that matter, brute and void of intelligence in itself, could form beings that wear the stamp of perfect wisdom? The faith shortens the way very much, and spares us abundance of pains. There are subjects, in which reason, unaided by that light, can make no progress with any certainty.

ARTICLE III.

OF THE NATURE OF THE SOUL.

THERE is hardly any question, about which the philosophers are more divided, than that which relates to the nature of the soul; and there is hardly one, which shows more sensibly, of what human weakness is capable, when guided solely by its own lights. They dispute much with each other about what the soul is, where it resides, whence it derives its origin, and what becomes of it after death.¹ Some believe the heart itself to be the soul. Empedocles says, it is the blood which is mingled in the heart; and others that it is a certain part of the brain. Many affirm, that neither the heart, nor the brain, are the soul itself, but only the seat of the soul; and that it is a breath, or else a fire. This last is the opinion of Zeno the Stoic. Aristoxenus the musician, who was also a philosopher, makes it consist in a certain harmony of the different parts of the body. Xenocrates places it in numbers, as Pythagoras had thought before him. Plato distinguishes three parts in the soul. He places the principal, which is reason, in the head; and makes the two others, choler and cupidity, reside, the first in the breast, and the other under the heart. Aristotle perceiving, that not one of the four principles, of which, according to him, all things are made, was susceptible of the properties of the soul, as thinking, knowing, loving, hating, &c. supposes a fifth, to which he gives no name; calling the soul by a new term, that, according to Cicero, signifies a continued and uninterrupted motion, but a term in effect, of which the most learned neither understand nor can explain the force.²

This is the enumeration Cicero gives us of the various opinions of the philosophers concerning the nature of the soul. For as to that of Democritus, who makes it consist of atoms, he does not think it worth repeating. He concludes this detail with these words, which seem to express a great indifference for so important a subject: "Which of all these opinions is true, some god may know; we content our-

selves with inquiring which is the most probable.³ The system of the Academy, which he espoused was, that the false is universally mingled in such a manner with the true, and resembles it so much, that there is no certain mark to distinguish them from each other. Accordingly Cicero, in the places where he mentions the immortality of the soul, speaks of it almost always with doubt, and as one who supposes the systems for and against it equally possible and rational. And would to God that only the ancient philosophers were to be reproached with this way of thinking! It certainly argues a deplorable blindness in them, and a renunciation of all light and reason. But this doubt, when voluntary and confirmed, is absolutely monstrous and inconceivable in a Christian. "The immortality of the soul," says M. Pascal in his Thoughts, "is a thing of such importance to us, and concerns us so highly, that one must have lost all reason to be indifferent about it. All our actions and thoughts must have so different a bent according to our belief, that there are or are not eternal good things to be hoped, that it is impossible to take any step with sense and judgment, without regulating it with a view to this point, which ought to be our final object."⁴ Is there any stupidity, I could almost say brutality, like that of daring to risk an eternity of happiness, or misery, upon a mere doubt?

Many of the philosophers, of whom I have been speaking, admitted only bodies, and no pure spirits distinct from matter; even the Stoics, whose moral doctrine in other respects included such fine principles, were of this number. They did not believe, that the soul was absolutely immortal, but only made it live a great while, *like crows*, says Cicero.⁵ Vossius,⁶ in his treatise upon idolatry, believes, that by that *great while*, they understood the whole duration of the world, till the general conflagration. For, according to the Stoics, by an ultimate revolution, the whole world was to become only fire.⁷ Particular souls were then, with all the rest, to be resolved into, and blended with the universal soul, their first principle. Till then they were to inhabit the upper region, where they would have nothing to do but to philosophize at their ease, supremely happy, in the clear vision of the universe. Cicero describes this philosophical beatitude with a kind of enthusiasm.⁸ "Certainly," says he, "we shall be happy, when, with our bodies, we shall have thrown off all passion and disquiet. What now constitutes our joy, when free from all care we apply ourselves ardently to some object that engages and delights us, we shall then do with far greater liberty; abandoning ourselves entirely to the contemplation of all things which it will be given us to know perfectly. The situation itself of the places which we shall have attained, in facilitating to us the view of celestial objects, and in kindling in us the desire of penetrating their beauties, will enable us fully to satisfy the insatiable ardour natural to us for knowing truth.—— And it will discover itself more or less to us, in proportion as we shall have been more or less solicitous to nourish ourselves with it during our abode upon earth."⁹ What a sight will it be, when we shall be able at one view to behold the whole earth, its situation, figure, limits, and all its regions, whether inhabited, or desert and void through excess of heat and cold!" Behold here then the extent of philosophical beatitude! What blindness and misery! We see, however, through this darkness, an admirable and very instructive principle: that in the other life, truth will reveal itself to us in proportion as we have sought after and loved it in this.

The philosophers, who admit the immortality of

the soul, give it a more noble employment after death. I do not examine whether Aristotle is to be ranked in that number. That question has exercised and divided the learned, and is not for his honour, from only continuing dubious. As to Plato, we see in all his works, that, as well as Socrates his master, and Pythagoras who preceded them, he believed the soul to be immortal. Cicero, after having repeated many of his proofs, adds, that Plato seems to endeavour to persuade others of this truth, and to be fully convinced of it himself.¹

Plato, treading in the steps of Socrates, opens two ways for souls after death: ² one of these lead such as have sullied themselves with crimes and violence upon earth to the place of torments; and by the other ascend to the august assembly of the gods, the pure and innocent souls, that, during their abode in bodies, have had as little intercourse as possible with them, and have industriously imitated the life of the gods, from whom they derive their origin, by practising every kind of virtue. Right reason alone made these great philosophers perceive, that, to justify Providence, it was necessary that there were rewards for the good, and punishments for the wicked, after this life.

ARTICLE IV.

OF THE EFFECTS OF NATURE.

THIS is properly the place where I should treat the Physics at large, and enumerate the principal questions it considers, in order to show the origin and progress of this science, and the different opinions of the ancients and moderns concerning it. But this subject, besides exceeding my ability, is too vast and extensive to be contained within the narrow limits of an abridgment. The reader may find it treated with great perspicuity in the work of F. Reynault the Jesuit, entitled, *The ancient origin of the modern physics*, of which I have made great use. He retains a very extraordinary moderation in it, whilst he does equal justice to the ancients and moderns. I shall content myself, therefore, with some general reflections.

The physics alone, or almost alone, were for many ages the employment and delight of the learned of Greece. They were the reigning science there during about four hundred years.³ The philosophers were divided into two famous schools: the Ionic, of which Thales was the founder; and the Italic, who followed Pythagoras, as I have observed before. But the philosophers, who acquired most fame in respect to physics, were Democritus and Leucippus, because Epicurus adopted their system, which we have extensively from Lucretius.

This system, as I have already observed, admitted no principles but matter and void; two points, of which the one, namely, vacuity, is scarce conceivable; and the other repugnant to reason, especially in respect to the inclination or obliquity, which Epicurus gives his atoms. Notwithstanding the absurdities of this system, the Epicureans, properly speaking, were the only natural philosophers of antiquity. They at least saw, that the causes of what happens to bodies were to be sought only in bodies, as well as their properties, motion, rest, and figure: and, with this principle, they do not explain certain particular effects amiss, though they err grossly in respect to first causes.

¹ Plato pro immortalitate animæ tot rationes attulit, ut velle ceteris, sibi certè persuasisset, videretur. *Tusc. Quest. l. i. n. 49.*

² Ita censelat (Socrates) duas esse vias duplicesque cursus animorum: ex corpore excedentium. Nam qui se humanis vitiis contaminassent, et se totos libidinis dedissent, quibus cæcati velut domesticis vitiis aculei flagitii se inquinassent, vel in rep. violanda fraude inextinguibiles concepissent, his demum quoddam iter esse, seclusum a consilio deorum. Qui autem se integros castosque servassent, quibusque, fuisset minima cum corporibus contagio, seseque ab his semper severassent, essentque in corporibus humanis vitam imitari deorum; his ad illos, a quibus essent profecti, reditu faciliem pateret. *Tusc. Quest. l. i. n. 72.*

³ From Thales to Hipparchus, with whom the natural philosophers of antiquity end very near that number of years are computed.

Aristotle treated the physics, or rather spoiled them, in explaining corporeal effects by terms that can relate only to mind, as *sympathy, antipathy, horror, &c.* and in defining things only by some of their effects, often ill chosen, expressed in an obscure manner, and almost always without showing their causes.

It was not till an age before the birth of Jesus Christ, that the physics began to appear at Rome, and to speak the Roman language there by the mouth of Lucretius. "At length," says that philosophical poet, "the secrets of nature are no longer mysteries; and I can boast of being the first that taught them to speak the language of our country."

Denique natura hæc rerum ratione reperta est

Nuper; et hanc primus cum primis ipse repertus

Nunc ego sum, in patrias qui possim vertere voces

Lucr. l. v.

Seneca says,⁴ that the causes of the eclipses of the moon, and of many other phenomena in nature, were but lately known at Rome; with what reason I cannot say. Long before Pliny's time, the day and hour of eclipses were foretold;⁵ and Cicero assures us, that in his time the hour and magnitude of all eclipses, either of sun or moon, had been calculated for all succeeding ages.⁶ Sulpitius Gallus, the evening before Paulus Æmilius was to give Persens battle, foretold an eclipse of the moon, that was to happen the same night, and gave the army the reasons of it.⁷ The eclipse began exactly at the hour he had mentioned, which made the troops consider him as a person of more than human knowledge. "Edita horâ luna cùm defecisset, Romanis militibus Galli sapientia prope divina videri." This last example proves, that this kind of knowledge was very rare among the Romans in those days, who never applied themselves very much either to the study of physics, or the other superior sciences.

The Greeks differed much from them in this point. They cultivated them during a great length of time, and if the honour of inventing them be not their due, nobody can deny them that of having exceedingly improved them. It is not easy to find a system of the world applauded in our days, of which the ancients have not at least had some knowledge. If we fix the earth with Tycho Brahe, in order to make the sun, circled with Mercury and Venus, turn round it, that system was known to Vitruvius.⁸ Some fix the sun and stars, to make the earth turn round from west to east exactly upon its centre: and this is the system, at least in part, of Epicharmus the Pythagorean, and of Nicetas the Syracusan. The system now in vogue, is that which places the sun in the centre of a vortex, and the earth in the number of the planets: and which makes the planets turn round the sun in the following order: Mercury, nearest the sun; Venus; the Earth turning upon its centre, with the Moon revolving round it; Mars; Jupiter; and Saturn last of all. This system of Copernicus is not new: it is that of Aristarchus,⁹ and part of the mathematicians of antiquity; of Cleantes of Samos;¹⁰ of Philolaus;¹¹ of the Pythagoreans,¹² and very probably of Pythagoras himself.

And, indeed, it had been a wonder if this system of Copernicus, which seems so rational, had never entered into the thoughts of any of the ancient philosophers. This system, I say, appears very rational. For, if the earth did not move, the sun and all the stars, which are very great bodies, must make an immense revolution round the earth in twenty-four hours; and the fixed stars, which would be in the

greatest circle, where the motion is always the strongest, would in one day take a compass of three hundred millions of leagues, and go farther than from Paris to China in the time one could pronounce these words, *Go to China*. For all this must happen, if the earth does not turn round upon its own axis every twenty-four hours. It is not difficult to conceive, that it does turn round in this manner, which at most is not above nine thousand leagues, a trifle in comparison with three hundred millions.

Among the moderns, rational physics had made little progress, till the times of Descartes. He took from the Epicureans the principle, That to explain the effects of bodies, recourse was to be had only to bodies. But religion taught him to reject their impious principles of necessity and chance. For the principle of his physics he lays down a God the Creator and First Mover. He also proscribed the *Vacuum* as inconceivable, and *atoms*, admitting matter to be divisible *ad infinitum*, or, as he terms it himself, *ad indefinitum*. With matter and motion, which, he owns, could proceed only from the hands of God, he had the boldness to create a world: and instead of tracing effects to their causes, he pretended to establish causes, and to deduce effects from them. From thence flows his hypothesis of *Vortices*, which is the most probable opinion hitherto advanced upon the causes of the universe, though in a great number of particular consequences, Descartes, in effect of the weakness inseparable from human nature, is frequently enough mistaken.

His physics reigned in peace, when Newton undertook to dethrone them. He set the vacuum on foot again, and pretended to demonstrate the impossibility of vortices; in a word, to subvert entirely the Cartesian physics. Hence ensued a great war in the learned world, which has been carried on with abundance of warmth and vigour on both sides. Whether the learned Englishman has succeeded or not, is a question that does not concern me, and will not soon be decided. He has at least been more circumspect than Descartes, in having proposed to himself to proceed from known effects to the discovery of their causes.

It must be owned in general, that in respect to physics, the moderns have very much improved the learning of the ancients, and have added many new discoveries to them of great importance. And it could not have happened otherwise. Could it be possible, for so many fine geniuses, as successively applied themselves to the observation of Nature, during the course of so many ages, not to have enriched physics, especially since they have discovered extraordinary aids which the ancients had not? Nature is an inexhaustible fund, and curiosity has scarce any bounds. Hence it was no illusion, when Seneca foresaw, that posterity would discover abundance of secrets in nature unknown in his time. "Nature," said that great man, "does not disclose all her mysteries at once. The time will come, when much that is now hid will appear in full light. Posterity will wonder how such evident things escaped us; and even the vulgar know what we are ignorant of."¹ This opinion is entirely reasonable, and rich in sense. Many things have conduced to the considerable progress of the physics among the moderns. They may be said to have entirely changed face, and soared to new heights, since the learned have made it a law to themselves to study nature in nature itself, to make use of their own eyes and reason for discovering its mysteries, and no longer subject themselves blindly and without examination to the judgment of others; in a word, since they have thrown off the yoke of authority, which in physical matters ought not to enslave our minds, and is only proper to keep them, through weak respect, in a state of idle and presumptuous ignorance. What progress did physics make during the course of the fourteen or fifteen ages, in which the authorities of

Aristotle and Plato were alternately the law? That method served only to excite vain disputes, to prevent generous efforts, and to extinguish all curiosity and emulation; whilst the lives of philosophers most capable of improving the physics, passed in knowing what had already been thought, rather than what one ought to think.

I always disliked a maxim of Cicero's, which, however, pleased him much, and which he repeats more than once. It is, that he had rather err with Plato, than think aright with the other philosophers. "*Errare mehercule malo cum Platone—quam cum istis vera sentire.*"² I do not see how this thought can consist with good sense. Is it ever just to prefer error to truth, under whatever fine name or specious form it may conceal itself? We see here the tendency of this kind of idolatry for great men. Only religion has a right to captivate our minds in this manner, because it has God himself for its voucher, and there is no fear of erring with it.

Every body knows how much nature seems to affect concealing her secrets from us. To discover her mysteries, it is necessary to follow her step by step; we must, to use the expression, surprise her in her operations; we must make observations and experiments, we must have a due number of phenomena, in order to establish a just principle for explaining them; and experiments must verify conjectures. The ancients practised all I have now said to a certain degree, and not without success. But the sagacity of the moderns, assisted by the invention of many new instruments, has rose exceedingly upon their knowledge. The principal of their new inventions are the telescope, the microscope, the Torricellian tube, or the barometer, and the air-pump.

One Zachariah Jansen invented the telescope and microscope about the end of the sixteenth century. Torricelli the tube, which bears his name, otherwise called the barometer, about the middle of the seventeenth century; and Otho Guericke the air-pump some time after.

Zachariah Jansen was a Hollander of Middleburg in Zeland, by trade a spectacle-maker. Chance, by which a great number of the finest discoveries are made, and under which divine Providence delights to conceal itself, had a great share in this of Jansen. Without any premeditated design, he placed two spectacle-glasses at a certain distance opposite to each other, and perceived, that the two glasses in that situation magnified objects considerably. In consequence, he fixed glasses in that manner, and from the year 1590 made one of the length of twelve inches. Such was the origin of the telescope, which was afterwards greatly improved. The inventor of the telescope did in little almost what he had done in large; and from thence came the microscope. To the former of these instruments we are indebted for the knowledge of the heavens, at least in part; and to the latter for that of a new little world. For we must not believe that we see every thing that inhabits the earth. There are as many species of invisible as visible animals. We see them from the elephant to the mite. And there our sight ends. But at the mite begins an infinite multitude of animals, of which that insect is the elephant, and which our eyes cannot discern without aid. By the help of the microscope we see thousands of insects, swimming and darting to and fro, in the hundredth part of a drop of water. Lewenhoeek says, that he has seen fifty thousand in a very small drop of liquor. These glasses may be said to be a new organ of sight, which one could not have presumed to expect from the hands of art. How much would the ancients have been surprised, if it had been foretold to them, that, by the means of certain instruments, their posterity should one day see an infinity of objects not seen by them: a heaven unknown to them, and plants and animals, of which they did not so much as suspect the possibility.

Torricelli was mathematician to the duke of Florence, and Galileo's successor. Galileo explained the rise of water in pumps to about thirty-two feet

¹ *Resum natura, sacra sua non simul tradit:—Veniet tempus, quo ista, quæ nunc latent, in lucem dies extrahat:—quo posteri nostri tam aperta necesse non mirentur:—Multa venientis ævi populus ignota nobis sciet.*

by saying that nature abhorred a vacuum, and he fixed that height as the limit of its efficacy. In 1643, Torricelli tried the efficacy of this imaginary horror in quicksilver. He caused a glass tube of three or four feet to be made and sealed at the end hermetically. This he filled with quicksilver, and turned it upside down as is still practised. The quicksilver came down: but stopped, as of itself, at the depth of between twenty-seven and twenty-eight inches.

Otho Guericke, consul of Magdeburg, formed the design of trying a much greater kind of vacuum than that of the tube of Torricelli. Accordingly, he caused a large round vessel of glass to be made, with a sufficiently small opening at bottom, and a pump and sucker to draw the air out of the vessel. And this was the origin of the air-pump. Wonders came from his hands, that amazed philosophers, no less than other people. With what astonishment, for instance, did they not see two brass basins, made exactly in the form of hemispheres, and applied to each other at their edges, that could not be separated by eight horses on a side made fast to each of them, and drawing different ways.

It is easy to conceive how such these machines, and others of a like nature, invented by the moderns, and much improved by use itself, and length of time, must have conduced to the progress of physical observations.

But what has contributed most to it, is the establishment of academies. The last age gave birth to four of the most famous, almost at the same time. *The Academy del Cimento*, at Florence; *the Royal Society*, at London; *the Royal Academy of Sciences*, at Paris; and *the Academy of the Curious in the secrets of nature*, in Germany. The desire of supporting the reputation of a body of which one is a member, and of distinguishing one's self by important works, is a powerful incentive with the learned, which keeps them almost continually in action. Besides which, only societies, and societies protected by the prince, are capable of making the necessary collection of observations and well-attested facts, for establishing a future system. Neither the learning, pains, life, nor faculties of a single person suffice for that. Too great a number of experiments, of too many different kinds, all too frequently repeated in too many various manners, and pursued with the same spirit for too great a length of time, are necessary to that effect.

I admire the wisdom and modesty of the Academy of Sciences, that, notwithstanding the many learned works with which it has enriched the public, and the many useful discoveries that are the fruits of its labours and observations, considers the sciences, at least the physics, as still in their cradle. But I admire still more the religious use it makes of such curious knowledge, which, according to it, ought to inspire us with a high regard for the Author of nature, from the admiration of his works. "One can scarce help repeating often," say its memoirs, "that in respect to the physics, the most common objects become so many miracles, as soon as we consider them with certain eyes." And in another place, "The sublime reflections into which the physics lead us upon the Author of the universe, are not to be ranked among its simple curiosities. That great work, always the more wonderful the more it is known, gives us so high an idea of the Artificer, that we find ourselves lost in admiration and reverence of him, as often as we look into it. True physics rise so high as to become a kind of theology." Before I proceed to the mathematics, I shall touch lightly upon Physic or Medicine, Anatomy, Botany, and Chemistry, all which are either parts of, or relate to, physics in general or natural philosophy. Tertullian calls the physician's art *the sister of philosophy*; and every body knows the three others depend on physic.

CHAPTER IV.

I TREAT what relates to Physic in a separate chapter, to which I add Botany, Chemistry, and Anatomy, which are parts of it, but of which I shall say very little.

SECTION I.—OF PHYSIC.

PHYSIC is undoubtedly of the same date with diseases, for men have endeavoured to rid themselves of them, ever since they knew them; and diseases are almost as ancient as the world itself, because they were the effect and punishment of sin. Men were long each his own physician, and it is hard to fix the time when physic was first made an art and profession. Necessity and experience made way for them. In certain countries, those who had been cured of some disease, wrote down how, and by what remedies it had been effected, and deposited these accounts in the temples, for the instruction of others in like cases.¹ In other places, as in Egypt and Babylonia, the sick were exposed in public, in order that such as passed by, who might have been sick and cured of the same distemper, might give them advice.²

The Egyptians considered their god Hermes, or Mercury, as the inventor of medicine. It is certain that they cultivated it both earlier and with greater success than any other people. The Greeks disputed that glory with them, or at least followed them very close in it. They will supply us with all the physicians, of whom I shall speak: for the Romans applied themselves little to this science. Before the Trojan war, Chiron the Thessalian, surnamed the Centaur, who was Achilles's governor, made himself famous in physic, by the cure of wounds, and the knowledge of simples, which he imparted to that hero, and his friend Patroclus.

Æsculapius, Chiron's disciple, did not give place to his master. Pindar represents him as extremely versed in all the parts of physic.³ Fable tells us, Jupiter, enraged that he had restored Hippolitus the son of Theseus to life, killed him with thunder; which intimates, that by his skill he cured such desperate diseases that he was said to restore the dead to life. Having been placed in the number of the immortals, temples were erected to him in different places as the god of health. The most famous was that of Epidaurus. It was from thence, in consequence of a famous disputation, at the head of which was Q. Ogulnius, that he is pretended to have come to Rome in the form of a serpent, and to have delivered the city from the plague, in the year 461 from its foundation. A temple was afterwards built for him without the walls. That of Cos, the country of Hippocrates, was also very famous. In it were several tables or paintings, on which were written down the remedies the god had directed many sick persons to take, who had been cured in effect.

Homer makes mention in the *Iliad* of Æsculapius' two sons, both famous physicians, the one called Machaon, very expert in chirurgical operations, which in those times, as well as in the succeeding ages, was not distinct from the practice of physic; the other Podalirius, more versed in the kind of physic called afterwards *iatry*, that is to say, founded upon principles and reasonings.⁴ On his return from the Trojan war, Podalirius was driven by a tempest upon the coasts of Caria, where he cured a daughter of king Damathus, by bleeding her in both arms. The father, by way of reward, gave her to him in marriage. Among other children, he had one called Hippolochus, from whom Hippocrates says he was descended.

Pliny⁵ supposes an interval of six or seven hundred years between the siege of Troy and the Peloponnesian war, that is to say, the time of Hippocrates; which is not quite exact. Celsus⁶ places Pythagoras, who lived in the time of Cyrus and his two successors, and some other philosophers, as Empedocles and Democritus, in the number of celebrated physicians.

Physicians are distinguished into different classes and sects. Some are called *Empirics*, because they followed experience almost entirely in their practice. Others, of whom Hippocrates was the chief, joined

⁶ Cels. in Proem.

reason with experience, which kind of physic took the name of *Dogmatic* or *Rational* from them. Some affected to depart from all other physicians, and to follow a peculiar method of their own: these were called the *Methodists*. I shall not confine myself scrupulously to this division. I shall only follow the order of time, and speak of such physicians as were most known. All the different sects of physicians, for there is a great number of them, are learnedly treated in Mr. Daniel le Clerc's *History of Physic*, a work of profound erudition.

DEMOCEDES of Crotona gave proofs of his skill, in restoring sleep and health to king Darius, (Ant. J. C. 519.) whom a sprain of the foot, occasioned by a fall from his horse, kept perpetually awake, and in excessive pain, which the physicians of the country were not able to remove. He afterwards cured the queen Atossa of an ulcer, which she had long concealed out of modesty. I have related this physician's history, with that of Darius.

HEROPHILUS acquired also great fame by physic, A. M. 3704, Ant. J. C. 300. He made much use of botany, and still more of anatomy, in which he made great improvements.¹ The princes permitted him to dissect the living bodies of condemned criminals, of whom a great number passed through his hands. This made Tertullian call him an executioner rather than a physician.²

HERODICUS of Sicily, flourished under Artaxerxes Longimanus, A. M. 3540, Ant. J. C. 464. The sect called *Διαίτηται*, from using scarce any remedy except diet and a regimen of life, acknowledged him their chief; as well as that called the *Gymnastic* sect, from making great use of the exercise of the body for restoring and confirming health.³ He was the brother of the famous rhetorician Gorgias; but is best known by one of his disciples.

HIPPOCRATES, of the island of Cos, that illustrious disciple. His birth is dated the first year of the 80th Olympiad, A. M. 3544, Ant. J. C. 460. He is said to have descended from *Æsculapius* by *Heraclides* his father, and from *Hercules* by his mother *Praxitea*. He first applied himself to the study of natural things in general, and afterwards to that of the human body in particular. His own father was his first master. He also received lessons from another celebrated physician, *Herodicus*, of whom I spoke last. He made a great proficiency in all the parts of physic, and carried the knowledge of it as high as was possible in those days.

I have already said that he was born at Cos. That island was consecrated to the god *Æsculapius*, who was adored there in a particular manner. It was a custom for all, who had been cured of any distemper, to make an exact memorandum of the symptoms that had attended it, and the remedies by which they had been relieved. Hippocrates had caused all these accounts to be copied, which were of no small advantage to him, and served him instead of a great length of experience.

His vast capacity appeared in a peculiar manner during the plague, that raged particularly in the city of Athens and throughout Attica during the Peloponnesian war, A. M. 3574, Ant. J. C. 430. I have related elsewhere his great zeal and devotion for the preservation of his country, the noble disinterestedness which induced him to refuse the advantageous offers of the king of Persia, and the extraordinary honours with which Greece thought it incumbent upon itself to reward the important services he had rendered it.

The people of Abers are said to have wrote to Hippocrates, desiring him to come thither and visit Democritus. They saw that philosopher regardless of every thing, laugh at every thing, say that the air was full of images, and boast that he made voyages into the vast immense of things. Considering all this as so many symptoms and beginnings of frenzy, they

were afraid he would run mad, and that his great learning would entirely turn his brain. Hippocrates set them right, and judged very differently of Democritus' condition. It is not certain that the letters ascribed to Hippocrates, whence this fact is taken, are genuine.

The writings which he left behind him in great number, have always been and still are considered, as a very excellent and proper foundation for the study of physic. He has preserved the remembrance of an event in them, which says much for his ingenuousness. It is the sincere confession of an error, which he had committed in dressing a wound in the head: for anciently, as we have observed, physic, surgery, and pharmacy, were not distinct professions. He is not ashamed to own, at the expense in some measure of his glory, that he was mistaken; lest others, after him and by his example, should fall into the same error.⁴ Little minds, says Celsus, and men of vulgar abilities do not act in this manner, but are much more careful of the small reputation they have, because they can lose nothing without impoverishing themselves. Only great geniuses, conscious themselves of the abundance they otherwise possess, are capable of such a confession, and of neglecting the little losses, that diminish nothing of their riches and opulence. He makes also another confession, that argues an admirable spirit of candour and ingenuity. Of forty-two patients, whose distempers he describes in his first and third books upon *epidemic diseases*, he owns that he cured only seventeen, that the rest died under his hands. In the second book of the same work, speaking of a kind of quinsy attended with dangerous symptoms, he says, that all his patients recovered. "Had they died," adds he, "I should have said so with the same freedom." In another place,⁵ he complains modestly of the injustice of those who cry down physic, under the pretence, that many people die in the hands of physicians—as if, says he, the death of the patient might not be imputed to the insurmountable violence of the distemper, as much, or rather more, than to the fault of the physician. He declares,⁶ that it is no dishonour to a physician, when he is at a loss how to act in certain difficult cases, to call in other physicians, in order to consult with them upon what is necessary to be done for the patient's good. Whence we see that such consultations are an ancient custom.

The character of a truly honest man and one of the greatest probity, appears in the oath of Hippocrates, with which he introduces his works. He calls the gods, who preside over physic, to witness the sincere desire he has to discharge exactly all the duties of his station. He expresses a warm and respectful gratitude for him who taught him the art of physic, and declares that he shall always consider him as his father, and his children as his own brothers, whom he shall make it his duty to assist upon all occasions, both with his fortune and advice: He protests, that in the regimen which he shall prescribe for the sick, he shall take great care to consult what may be best for them, and to avoid whatever may be to their prejudice. He proposes to himself the leading of a pure and irreproachable life, and not to dishonour his profession by any action worthy of blame. He says that he shall never undertake to cut for the stone, and shall leave that operation to persons whom long experience has rendered dexterous at it. He protests that, if in visiting his patients or otherwise, he shall discover any thing which ought to be concealed, that he would never reveal it, but will inviolably observe the sacred law of secrecy. And lastly, he hopes, by his punctual attachment to all these rules, that he shall acquire the esteem of posterity, and consents to forfeit the good opinion of the world for ever, if he is so unfortunate as to depart from them.

* De futuris se deceptum esse Hippocrates memoris prodidit, more magnorum virorum, et fiduciam magnorum rerum habentium. Nam levitia ingenii, quia nihil habent, nihil sibi detrahunt. Magni ingenio, multaque nihilominus habitudo, convenit etiam: veri erroris confessio, precipue in eo ministerio, quod utilitatis causa posteris traditur, ne qui decipiantur eadem ratione qua quis deceptus est. ³ Eustath in liiad.

He is highly praised for his disinterestedness, a most estimable virtue in a physician. What he says upon this subject, is worthy of remark. He is for having the physician act, in respect to his fees, with honour and humanity, and regulate them by the patient's power to reward them more or less liberally. There are even occasions, says he, in which the physician ought neither to ask nor to expect reward; as in the cases of strangers and the poor, whom all the world are obliged to assist. He appears to have been full of respect for the Divinity.¹ "Those," says he, "who first discovered the manner of curing diseases, believed it an art, of which the invention ought to be attributed to God." I have already observed elsewhere, that Cicero was of the same opinion. *Deorum immortalium inventio consecrata est ars medica.*²

Nothing is particularly known of the death of Hippocrates. He died at a very advanced age, and left two sons, Thessalus and Draco, who acquired great reputation among the physicians, as well as Polybius his son-in-law and successor.

I have spoken, in the history of Philip, of the ridiculous vanity of a physician called Menecrates, whom that prince treated as he deserved.

PHILIP of Acarnania is known from the salutary draught he gave Alexander the Great, which saved his life, at a time when endeavours had been used to render that physician suspected, A. M. 3671, Ant. J. C. 333.

ERASISTRATUS made himself known and esteemed by his address in discovering the cause of the sickness of Antiochus Soter,³ the son of Seleucus king of Syria. I have related the fact in its place. If Pliny⁴ may be believed, that wonderful cure which restored a tenderly beloved son to his father, was rewarded with a hundred talents, that is to say, a hundred thousand crowns.

APOLLOPHANES, physician to Antiochus surnamed the Great, was very learned in his profession; but became still more famous by the important service which he rendered his master, A. M. 3785, Ant. J. C. 219. Herminas, the first minister of that prince, committed unheard of extortions and oppressions, and had rendered himself so terrible, that nobody dared lay their complaints before the court. Apollophanes had so much love for the public good, as not to fear risking his fortune for it. He discovered the general discontent of the kingdom to the king, and left that lesson to physicians, upon the use they ought to make of their freedom of access to princes.

MITHRIDATES, who was so long the terror of the Romans, distinguished himself highly in physic, A. M. 3890, Ant. J. C. 124, not only by the invention of the antidote that still bears his name, but the composition of several learned works, which Pompey made Lengus his freedman translate into Latin.

ASCLEPIADES of Bithynia, who at first taught eloquence at Rome, A. M. 3920, Ant. J. C. 84, quitted the profession of a rhetorician to take up that of a physician, which he believed more profitable than the other, and was not mistaken.⁵ He introduced an entire change in the practice observed before him, and departed almost in every thing from the principles and rules of Hippocrates. To solid and profound knowledge he substituted the insinuation and repute of a fine speaker, which often pass for merit with the sick. He also made it his business to flatter their taste, and gratify their desires to the utmost of his power, a certain means for gaining their confidence. His maxim was, That a physician ought to cure his patients, *safely, soon, and agreeably.*⁶ This practice were much to be desired, says Celsus. But the misfortune is, that to endeavour to cure too soon, and to prescribe nothing but what is agreeable, are generally attended with great danger. What contributed most to bring him into vogue, was his luckily meeting a party going to inter a man, in whom he found

some remains of life, and whom he restored to perfect health.⁷ Pliny often mentions this physician, but with very little respect.

THEMISON, the disciple of Asclepiades, was a native of Laodicea, A. M. 4000, Ant. J. C. 4. He made some alteration in his master's system, when he was old. The sect which he formed was called the *Methodic sect*, because he thought proper to establish a method for rendering physic more easy to learn and practice. Juvenal does not speak in his favour.

Quot Themison egros autumnio occidit uno.

As in one autumn learn'd Themison kills
As many, with his pills

Cicero and Horace mention Craterus as a learned physician.

DIOSCORIDES (*Pedacius*) was a physician of Anazarba, a city of Cilicia, in the first century. Vossius, after Suidas, says, that he was physician to Antony and Cleopatra. It is believed that they confound him with another Dioscorides, surnamed *Phacas*. The person meant here might live in Vespasian's time. Some of the learned have disputed, whether Pliny copied Dioscorides, or the latter extracted his work from Pliny. These two authors wrote at the same time, and upon the same subjects, without ever citing each other. The subject treated by Dioscorides, is the *Materia Medica*, the matter or elements of medicine. All bodies used in physic are so called, and are principally reduced to three species: plants, animals, and minerals, or things of the nature of the earth.

ANTONIUS MUSA, the freedman, physician of the emperor Augustus, cured him of a dangerous distemper, which had reduced him to the last extremity, by treating him in a manner quite different to what had been used before, and making him use cold baths, and refreshing draughts.⁸ This happy cure, besides the great presents made him by the emperor and the senate, acquired Musa the privilege of wearing a gold ring, which till then had been granted only to persons of the first condition. All physicians, on Musa's account, were exempted from all taxes for ever. The Roman people, to express their gratitude, caused a statue to be erected to him near that of *Æsculapius*. He took the same method with Horace, and made him use the cold bath in the midst of winter.¹⁰

CORNELIUS CELSUS is believed to have lived in the reign of Tiberius. He was very learned, and had wrote upon all kinds of subjects. Quinctilian,¹¹ who highly extols his erudition, terms him however only an indifferent genius: *Cornelius Celsus, mediocris vir ingenio*. I do not know whether the physicians agree with him in this point. We have eight books of his upon physic, which are wrote in very good Latin.

GALEN, the most celebrated of physicians next to Hippocrates, was of Pergamus. He lived in the reigns of Antoninus, Marcus Aurelius, and some other emperors, A. D. 131. He was educated with great care in the study of polite learning, philosophy, and the mathematics. When he had made choice of the profession of physic, he devoted himself entirely to it, went to many of the cities of Greece to receive lessons from the most famous masters in that science, and continued particularly at Alexandria in Egypt, where the study of physic flourished at that time more than in any other part of the world. When he returned into his own country, he knew how to make great use of the precious treasures of learning which he had collected in his travels. His principal application was in studying Hippocrates, whom he always considered as his master, and in whose steps he thought it his honour and duty to tread. He revived his principles in all their force

which had been neglected and left in oblivion above six hundred years.

He went to Rome at the age of thirty-four, where he acquired great reputation, and at the same time drew upon himself no less envy from the other physicians. His extraordinary cures of patients absolutely given over, his sagacity in discovering the true causes of distempers that had escaped others, the certainty with which he often foretold all the symptoms that were to happen, the effect his remedies would produce, and the time in which a perfect cure would be effected; all this occasioned his being considered, on the one side, by the unprejudiced, as a physician of extraordinary learning and talents; and on the other, by his jealous brethren, as a man who performed all his operations by the assistance of magic. At least they spread that report to depreciate him, if possible, in the opinion of the people and the great.

The plague which happened some years after, A. D. 166, and which made horrible ravages throughout Italy and in many other provinces, determined him to return into his country. If it was to take care of the people, his design was very generous and laudable. He did not continue long there. M. Aurelius, at his return from his expedition against the Germans, A. D. 170, ordered him to Aquileia, whence he afterwards brought him in his train to Rome. The emperor reposed great confidence in him. The rigid life which that prince led, had very much impaired his health. He took a preparation of treacle every day to strengthen his stomach and lungs, which were very weak: this Galen made up for him. To this remedy the health he generally enjoyed, notwithstanding his great weakness, was attributed. That prince, intending to return into Germany, was extremely desirous of carrying Galen thither with him, whose great abilities, and perfect knowledge of his constitution, made him more capable of serving him than any other physician. Galen, however having desired him to leave him at Rome, the emperor, who was all goodness, complacency, and humanity, complied. I admire this condescension; but cannot conceive, how a physician in such a conjuncture could refuse himself to the desires of a prince so worthy of consideration. Perhaps the design he had formed of writing upon physic, and which he might have already begun to put in execution, might occasion this refusal. And indeed it was after this expedition of M. Aurelius till his death, and during the reign of Commodus his son and successor, that Galen composed and published his writings upon physic, either during his abode at Rome, or after his retirement into his own country. Part of his writings were lost in the conflagration, which destroyed whole quarters of Rome and many libraries in the reign of the emperor Commodus. The place and time of Galen's death are not exactly known.

A fact, which Galen relates himself, shows us both his vast ability, and the esteem which M. Aurelius had for him. "That prince," says he, "having been suddenly seized in the night with a colic and looseness, which made him feverish, his physicians ordered him to lie still, and gave him only a little broth in the space of nine hours. The same physicians returning afterwards to the emperor, where I happened to be, judged from his pulse, that he had a fever coming on him: for my part I continued silent, and even without feeling his pulse in my turn. This induced the emperor to ask me, turning towards the side where I was, why I did not come to him? To which I answered, that his physicians having already felt his pulse twice, I came into what they had done, not doubting but that they were better judges of his pulse than I. The prince however offering me his arm, I then felt his pulse, and having examined it with attention, I declared that there was not the least sign of the access of a fever, but that his stomach was clogged with some indigested food which occasioned his being feverish. M. Aurelius was so well convinced of what I said, that he cried out: "That's it;

you have hit it exactly: I feel my stomach clogged;" and repeated the same two or three times over. He afterwards asked me, what was to be done to relieve him? I replied, if any other person except the emperor were in the same condition, I should give him a little pepper in wine, as I have often done upon the like occasion. But, as it is the custom to give no remedies to princes, but what are very gentle, it will suffice to apply some wool steeped in oil of spike very hot, to the emperor's stomach. M. Aurelius," continues Galen, "did not fail to take both those remedies, and addressing himself afterwards to Pitholaus, his son's governor: 'We have but one physician,' said he, speaking of me. 'He's the only man of value we have.'"

The manners of that illustrious physician suited his ability and reputation. He expresses great respect for the Divinity in many places;² and says, "That piety does not consist in offering incense or sacrifices to him; but in knowing and admiring the wisdom, power, and goodness, that shine forth in all his works one's self, and in making others know and admire them." He had the misfortune of not knowing, and even of condemning the true religion.

He never mentions his father, or his masters, but with the warmest and most respectful gratitude, especially when he speaks of Hippocrates, to whom he ascribes the whole honour of all he knew or practised. If he departs some times from his opinion, for he respected truth above all things, it is with such precautions and reservations, as argue the sincere esteem he had for him, and how much he considered himself below him in every thing whatsoever.

His assiduity about the sick, the time which he bestowed upon knowing their condition exactly, the care which he took of the poor, and the relief he procured them, are fine models for the imitation of persons of the same profession.

We read in Pliny,³ that ARCHAGATHUS of Peloponnesus was the first physician, who came to Rome this was in the consulship of L. Enilius and L. Julius, the 535th year from the foundation of the city A. M. 3780, Ant. J. C. 215. It would be surprising if the Romans were so long without physicians. Dionysius Halicarnassensis,⁴ speaking of a plague, which swept off almost all the slaves and half the citizens in the 301st year of Rome, says, that there were not physicians enough for the number of the sick. There were physicians then at that time. But it is probable, that the Romans, till the arrival of Archagathus, used only the natural, or the simple empiric kind of physic, such as we may suppose it practised by the first men. That physician was treated very honourably at first, and rewarded with the freedom of the city: but the violent remedies which he was obliged to use, for his principal excellency consisted in surgery, soon disgusted the people both of him and of physic in general. It seems, however, that many physicians came from Greece to Rome to practise their art, though Cato, during his life, opposed it with his whole power. For, in the decree, by which, many years after the death of that celebrated censor, the Greeks were obliged to quit Rome, the physicians are mentioned expressly. Till Pliny's time, of all professions, that of physic, as gainful as it was, was the only one no Roman had followed, because they believed it below them; and, if any did practise it, it was, to use the expression, only in going over to the Grecian camp, and speaking their language: for such was the folly and madness of the Romans, and even of the lowest of the people, that they would confide only in strangers, as if their health and lives had been most safe in the hands of those, whose very language they did not understand.⁵

It is difficult, and indeed foreign to my subject, to

determine in respect to the merit of the ancient and modern physic, and to give the one the preference to the other. They have each their peculiar advantages, which render both highly estimable. It is natural to conceive, that the experience of many ages must have added considerable lights to the knowledge of the ancients. I desired a learned physician,¹ one of my Brethren in the College Royal and the Academy of Belles Lettres, and my particular friend, to favour me with a few lines upon what I might say with reason upon a subject absolutely unknown to me. I shall content myself with inserting them here, without any addition. "The new discoveries, which have enriched the physic of the moderns, and which may give it a preference to that of the ancients, are: 1. Those of anatomy, which have made it more perfectly acquainted with the structure of the human body, and the wonders of the animal economy; amongst others, the circulation of the blood, with all its relations and dependencies: which has given it a great insight into the causes of diseases, and the manner of treating them. 2. Those of surgery, which, besides many very salutary operations added to those of the ancients, have rendered the modern practice more safe and expeditious, and less painful. 3. Those of pharmacy, which consists in the knowledge and use of many specific remedies for the cure of certain diseases; as *Quinquina* for the ague, *Ipecacuanha* for the dysentery, &c. without reckoning those which chemistry has rendered more efficacious and less disgusting. 4. The opening of bodies that have died of diseases, an abundant source of the most important observations, for improving the practice of physic in the treatment of the same diseases.

"The physic of the ancients is perhaps to be preferred to that of the moderns, in being less profuse of medicines in sickness, and less desirous to precipitate cures; in observing the motions of nature with more attention, and assisting them with greater confidence; and in being contented to divide the honour of the cure with nature, without arrogating the whole glory of it to itself," &c.

Physic, however useful and salutary, has had the misfortune to be the butt, almost in all times, even of great and highly estimable persons, especially among the Romans. Cato, to whose authority a triumph and the censorship add nothing, so much was his personal merit superior to all titles, was one of those who declared himself most strongly against the physicians, as we see in a letter to his son, preserved by Pliny.² But we must observe, that he means in it only the physicians from Greece, to which nation he has abundance of ill-will. "You may depend upon what I am going to say as a certain prediction. If ever that nation (meaning Greece) should impart to us their taste for letters, we are undone; and especially if they send us their physicians. They have sworn amongst themselves to destroy all the Barbarians with their art."³ The Greeks called all other nations by that name. So excessive an exaggeration refutes itself, and sufficiently explains what we ought to think of it.

Pliny the naturalist was much in the same way of thinking. He seems to have made it his business to decry the physicians, by throwing together all that could make them contemptible and even odious. He taxes them with avarice, upon account of the considerable rewards they received from princes: but ought the generous gratitude of the latter to be imputed to physicians? He reports the depravity of manners into which some of them fell: but were not these faults personal, and ought they not to be atoned for by the infinite services which others of the same profession have done mankind in all ages? He takes

pains to turn the consultations of physicians into ridicule: he repeats an ancient inscription upon a tomb, in which the deceased said, that he died of a multitude of physicians: *TURBA SE MEDICORUM PERIISSE*. He complains that of all the arts physic is allowed to be practised without undergoing any examination, or giving any proofs of its ability. "They learn it," says he, "at our hazard, and acquire experience at the price of our lives. No law punishes their ignorance; nor is there any example of its being chastised. Only a physician can murder with absolute impunity."⁴ Pliny has reason for these complaints; but they extend only to empirics, that is to say, persons of no repute, authority, or learning, who take upon them to practise an art which of all others stands most in need of these qualifications.

Extremes are not to be admitted upon this head, in which blind confidence, and ill-grounded contempt, may be equally dangerous. The holy scripture, which is the rule of our opinions, prescribes both to the patient and physician how they ought to think and act. "Honour the physician with the honour due unto him, for the uses which you may have of him: for the Lord hath created him.—The Lord hath created medicines out of the earth, and he that is wise will not abhor them.—Was not the water made sweet with wood, that the virtue thereof [of plants] might be known? And he hath given men skill, that he might be honoured in his marvellous works.—My son, in thy sickness be not negligent; but pray unto the Lord, and he will make thee whole: Then give place unto the physician; for the Lord hath created him: let him not go from thee, for thou hast need of him. There is a time when in their hands there is good success; for they shall also pray unto the Lord, that he would prosper that which they give, for ease and remedy to prolong life."⁵ Only the Spirit of God is capable of giving such wise and reasonable advice.

SECTION III.—OF BOTANY.

BOTANY is a science which treats of plants. This branch of knowledge has been esteemed in all ages and nations. Mankind are generally enough convinced, that all physic is included in simples; and there is great reason to believe, that it had its beginning in these remedies, which are simple, natural, of no expense, always at hand, and within the reach of the poorest person.⁶ Pliny cannot bear that instead of using them, people should go at a great expense to the most remote countries in quest of medicines. Accordingly we see, that the most ancient physicians distinguished themselves by the knowledge and use of simples: *Æsculapius*, who, if we may believe fable, restored *Hippolytus* to life by the use of them;⁷ *Chiron*, the master of *Achilles*, so skillful in physic; *Jaspis*, to whom his father *Apollo*, the god of physic, granted as a rare gift, the knowledge of simples.

Scire potestates herbarum, usumque medendi.

Æn. l. xii. v. 396.

To know the powers of herbs, and arts of cure.

Botany is one of the parts of natural philosophy: it calls in the aid of chemistry; and is of great use in physic. Natural philosophy, or the physics in general, considers the internal structure of plants, their vegetation, generation, and multiplication. Chemistry reduces them to their principles or elements. Physic derives from these elemental principles, and still more frequently from the experience of the effects of plants, when employed in substance, the use to be made of them for the health of a human body. The union of these several branches of knowledge in the same person forms an excellent character, but is not necessary

VOL. II.—75

o Botany properly so called, whose bounds are less extensive, within which it may confine itself with honour. To make plants a peculiar study, to know their most essential marks, to be able to name them in a short and easy method, that reduces them to their proper and respective kinds and classes, to describe them in terms so as to be known to those who never saw them; these are precisely the functions of a botanist considered as such.

In the earlier times, the knowledge of plants seems to have been purely medicinal: which is what rendered the catalogue of them so short and so limited, that Theophrastus, the best historian of antiquity come down to us upon this subject, names only six hundred, though he had collected not only those of Greece, but of Libya, Egypt, Ethiopia, and Arabia. Dioscorides and Pliny, though they might have had better and ampler memoirs upon this head, have scarce cited more. But, far from having established any order among them, they have not described those of which they speak, in a proper manner to distinguish and make them known; and have many, even of the most important in their collection, that are not now to be found.

The ages which succeeded that of Dioscorides, added little riches to botany. And, indeed, at length all the sciences were eclipsed, and did not appear again till the fifteenth century, when every body was intent upon hearing the ancients, in order to retrieve the learning which had been so long buried in oblivion. Pope Nicholas V. commissioned Theodore Gaza to translate Theophrastus, as the only man capable of making him understood. Soon after other learned men laboured successively in translating Dioscorides. These versions, though very estimable in other respects, served only to excite disputes between many very learned physicians.

The search after plants in the books of the Greeks and Latins was from that time conceived not the best method of making any great progress in the knowledge of them. Accordingly resolutions were taken to go in quest of it to the places where the ancients had wrote. With this view voyages were made to the islands of the Archipelago, Syria, Mesopotamia, Palestine, Arabia, and Egypt. These excursions were useless enough with respect to their principal design, the understanding of the ancient authors; but the learned having brought back a great number of plants which they discovered themselves, botany began to appear in its true form, and to change what before was only citation and comment, into natural observations and a regular science. About the end of the fifteenth century, they confined themselves solely to describing the plants of their own countries, or of those into which greater curiosity had carried the lovers of botany; and they began to point out the places, where each plant grew, the time of its coming up, its duration, and maturity, with figures, that constitute the principal value of these kind of works, from the clearness they give them. Various collections which appeared at that time, instead of the five or six hundred extracted by Mathiolus from the ancients, included in the beginning of the sixteenth century more than six thousand, all described with their figures. There was still wanting, however, a general order, or system, to the knowledge of plants, which might make it a science properly so called, by giving it principles and a method. Upon this several of the learned employed themselves afterwards, with a success, not indeed perfect hitherto, (for sciences attain their ultimate perfection only from succession of time,) but which afforded great views and insight for arriving at that perfection.

The system of botany at length received its last form from Monsieur Tournefort.¹ His institutions, attended with the description and designs of an im-

mense number of plants, will be an eternal monument of the vastness of his views, and his laborious inquiries, which cost him incredible fatigues, indispensably necessary to the design he proposed. For botany, says Mr. Fontenelle, in his oration in praise of Mr. Tournefort, is not a sedentary and inactive science, that may be attained in the repose and shade of a closet, like geometry or history; or which a most, like chemistry, anatomy, and astronomy, requires operations of no great pains and application. To succeed in it, the student must range over mountains and forests, must climb steep rocks and expose himself upon the brink of precipices. The only books that can instruct him fully in this subject, are sprinkled over the face of the whole earth, and to peruse and collect them, he must resolve upon fatigue and danger.

To succeed in the design of carrying botany to the greatest perfection, or at least to approach it, it would be necessary to study Theophrastus and Dioscorides in Greece, Asia, Egypt, Africa, and in all the places where they lived, or with which they were more particularly acquainted. Monsieur Tournefort received the king's orders in 1700, to make the tour of these provinces, not only in order for knowing the plants of the ancients, and perhaps also such others as might have escaped them, but for making observations upon natural history in general. These are expenses worthy of a prince of Louis XIVth's magnificence, and will do him infinite honour throughout all ages. The plague which then raged in Egypt, abridged Mr. Tournefort's travels to his great regret, and made him return from Smyrna into France in 1702. He arrived, as a great poet says upon a more pompous but less useful occasion, "laden with the spoils of the East."² Besides an infinity of various observations, he brought back thirteen hundred and fifty-six new species of plants, without including those which he had collected in his former travels. What vast riches! It was necessary to dispose them in an order that might facilitate the knowledge of them. This Mr. Tournefort had before laboured in his first work, published in the year 1694. By the new order which he established, the whole were reduced into fourteen figures of flowers, by the means of which we descend to six hundred and seventy-three kinds, or distinct genera, that contain under them eight thousand eight hundred and forty-six species of plants.

Since Monsieur Tournefort's death, botany has been greatly augmented, and new additions are every day made to it by the pains and application of those who have the care of this part of physic in the royal garden of France, especially since the direction of it has been given to the Count de Maurepas, secretary of state, who not only delights, but thinks it his duty to protect learning and learned men.

I ought here to express my gratitude to Monsieur Jussieu, senior,³ who communicated one of his memoirs upon botany to me.

SECTION III.—OF CHEMISTRY.

CHEMISTRY is an art which teaches to separate by fire the different substances contained in mixed bodies or, which is the same thing, in vegetables, minerals and animals; that is to say, to make the analysis of natural bodies, to reduce them into their first principles, and to discover their hidden virtues. It may be of use both to physicians in particular for the discovery of medicines, and natural philosophers in general for the knowledge of nature. It does not appear, that the ancients made much use of it, though perhaps it was not unknown to them.

Paracelsus, who lived in the beginning of the sixteenth century, and taught physic at Basil, acquired great reputation there, by curing many persons of diseases believed incurable with chemical remedies. He boasted, that he could preserve a man's life du-

¹ This was written (as may be at once supposed) before the appearance of Linnæus, whose system of classification superseded all others, and who established a new and by far the most important era in the history of botany. As the science belongs, comparatively speaking, to modern times, it does not fall within the design of this work to trace its progress.—Ed.

² *Spoilii Orientis onustus. Virg.*

³ Doctor regent in the faculty of physic in the university of Paris, professor and demonstrator of plants in the garden royal, &c.

ring many ages, and died himself at fourscore and eight.

Mr. Lemery, so expert and famous in chemistry, declared almost all analyses to be no more than the curiosity of philosophers, and believed that in respect to phisic, chemistry, in reducing mixed bodies to their principles, reduced them often to nothing. I shall relate one of his experiments, which is curious, and intelligible to every body.

He made an *Ætna* or *Vesuvius*, by burying at the depth of a foot in the ground, during the summer, fifty pounds of filings of iron and sulphur pulverized in equal quantities, the whole made into a paste with water. In about eight or nine hours' time, the earth swelled, and opened itself in several places; and emitted hot and sulphurous vapours, and at length flames. It is easy to conceive, that a greater quantity of this mixture of iron and sulphur with a proportionate depth of earth, was all that was wanting to form a real mount *Ætna*: that the sulphurous vapours would, in endeavouring a passage, have occasioned an earthquake more or less violent, according to their force and the obstacles in their way: that when they either found or made themselves a vent, they would break out with an impetuosity to occasion a hurricane: that if they made their way through a part of the earth under the sea, they would occasion those water-spouts, so dangerous to ships: and, lastly, that if they rose to the clouds, they would carry their sulphur thither along with them, which would produce thunder.

There is a kind of chimerical chemistry, that proposes the transmutation of metals as its object, and is called *Alchemy*, or *Seeking the philosopher's stone*.

SECTION IV.—OF ANATOMY.

ANATOMY is a science that teaches the knowledge of the parts of a human body, and of other animals,

Mem. de l'Acad. des Sciences, an. 1700.

by dissection. Those who have wrote upon anatomy among the ancients, are Hippocrates, Democritus, Aristotle, Erasistratus, Galen, Herophilus, and many others, who perfectly knew the necessity of it, and considered it as the most important part of phisic; without which it was impossible to know the use of the parts of a human body, and consequently the causes of diseases. It was, however, entirely renounced for many ages, and was not re-instituted till the sixteenth century. The dissection of a human body was held sacrilege till the reign of Francis I. and there is a consultation extant, which the emperor Charles V. caused the professors of theology at Salamanca to hold, in order to inquire whether a human body might be dissected for the knowledge of its structure with a safe conscience. Vesal, a Flemish physician, who died in 1564, was the first who revived and methodized what is called anatomy.

Since him, anatomy has made a great progress, and been much improved. One of the discoveries which have done most honour to the moderns, is the circulation of the blood. The motion by which the blood is carried several times a day from the heart into all the parts of the body by the arteries, and returns from those parts to the heart by the veins, is so called. In 1628, HARVEY, a celebrated English doctor, is said to have been the first who discovered the circulation, which is now admitted by all physicians. There are some, however, who deny him this glory, and even pretend that Hippocrates, Aristotle, and Plato, knew it before him. That may be: but they made so little use of it, that it is almost the same as if they had been ignorant of it; and as much may be said of them in respect to many other physical matters.

* According to Tertullian, this Herophilus, in order to know the human body, dissected a very great number of bodies.

OF THE MATHEMATICS.

THE Mathematics hold the first place among the sciences, because they alone are founded upon infallible demonstrations. And this undoubtedly gave them their name. For *Mathesis* in Greek signifies science.

I shall consider particularly in this place only Geometry and Astronomy, which are the principal branches of mathematical knowledge; to which I shall add some other parts, that have an essential relation to them.

I must confess, to my shame, that the subjects of which I am going to treat are absolutely unknown to me, except the historical part of them. But, by the privilege I have assumed, with which the public does not seem to be offended, it is in my power to apply the riches of others to my own use. What treasures have I not found upon this occasion in the Memoirs of the Academy of Sciences! If I could have taken all I have said upon such sublime and abstracted subjects from them, I should have no occasion to fear for myself.

CHAPTER I. OF GEOMETRY.

THE word *Geometry* signifies literally, the art of measuring the earth. The Egyptians are said to have invented it on account of the inundations of the Nile. For that river carrying away the landmarks every year, and lessening some estates to enlarge others, the Egyptians were obliged to measure their country

often, and for that purpose to contrive a method and art, which was the origin and beginning of geometry. This reason might have induced the Egyptians to cultivate geometry with the more care and attention; but its origin is undoubtedly of more ancient date. However that may be, it passed from Egypt into Greece, and Thales of Miletus is believed to have carried it thither at his return from his travels. Pythagoras also placed it in great honour, and admitted no disciples who had not learned the principles of geometry.

Geometry is to be considered in two different views; either as a speculative, or a practical science.

Geometry, as a speculative science, considers the figure and extent of bodies according to three different dimensions, length, breadth, and thickness, which form three species of extent, lines, superficies, and solids, or solid body. Accordingly it compares the different lines with each other, and determines their equality or inequality. It shows also how much greater the one is than the other. It does the same in respect to superficies. For instance, it demonstrates that a triangle is the half of a parallelogram of the same base and height: that two circles are in proportion to each other as the squares of their diameters; that is to say, that if the one be three times as large as the other, the first will contain nine times as much space as the latter. And lastly, it considers solids or the quantities of bodies in the same manner. It shows, that a pyramid is the third of a prism of the same base and height: that a sphere or globe is two thirds of a cylinder circumscribed, that is to say, a cylinder of the

* Herod. l. II. c. 100. Strab. l. xvii. p. 787.

same height and breadth: that globes are in the same proportion with each other as the cubes of their diameters. If, for example, the diameter of one globe be four times as large as that of another, the first globe is sixty-four times as much in quantity as the second. Accordingly, if they are of the same matter, the former will weigh sixty-four times as much as the other, because 64 is the cube of 4.

Practical geometry, founded upon the theory of the speculative, is solely employed in measuring the three species of extent, lines, superficies, and solids. It teaches us, for example, how to measure the distance of two objects from each other, the height of a tower, and the extent of land: how to divide a superficies into as many parts as we please, of which the one may be twice, thrice, four times, &c. as large as another. It shows us how to gauge casks, and the manner of finding the contents of any other vessels used either to hold liquids or solids. It not only measures different objects upon the surface of the earth, but the globe of the earth itself, by determining the extent of its circumference, and the length of its diameter. It goes so far as to show the distance of the moon from the earth. It even ventures to measure that of the sun, and its magnitude in respect to the terrestrial globe.

The most illustrious philosophers made this science their peculiar study: Anaxagoras, Plato, Aristotle, Architas, Eudoxus, and many others, of whom I shall only speak of the most known, and those whose works have come down to us.

EUCLID, Ant. J. C. 300. We shall speak of him in the sequel.

ARISTÆUS the elder. He seems to have been Euclid's contemporary. He wrote five books upon solid places, that is to say, as Pappus explains it, upon the three Conic Sections.

APOLLONIUS PERGÆUS, so called from a city of Pamphylia, Ant. J. C. 250. He lived in the reign of Ptolemy Evergetes, and collected all that the most learned geometricians had written upon conic sections before him, of which he made eight books, which came down entire to the time of Pappus of Alexandria, who composed a kind of introduction to that work. The four last books of Apollonius were afterwards lost. But in 1658 the famous John Alphonso Borelli, passing through Florence, found an Arabian manuscript in the library of the Medicis, with this inscription in Latin, *Apollonii Pergæ Conicorum Libri Octo*. They were translated into Latin.

ARCHIMEDES. I shall defer speaking of him for a little.

PAPPUS of Alexandria flourished in the reign of Theodosius, in the 395th year of Christ. He composed a collection upon geometrical subjects in eight books, of which the two first are lost. The Abbé Gallois, when the Academy of Sciences assumed a new form in 1699, undertook to work upon the geometry of the ancients, and particularly upon Pappus's collection, of which he was for printing the Greek text, that had never been done, and for correcting the very defective Latin version. It is a misfortune for the commonwealth of letters, that this was only intended.

Of the geometricians I have mentioned, the two most illustrious, and who have done most honour to geometry, but in a different degree of merit, were Euclid and Archimedes. Euclid is only an author of elements: but Archimedes is a sublime geometrician, whom even the most learned in the new methods, admire to this day.

EUCLID.

EUCLID the mathematician was of Alexandria, where he taught in the reign of Ptolemy the son of Laganus. We must not confound him, as Valerius Maximus has done, with another Euclid of Megara, the founder of the sect of philosophers, called the Megaric sect, who lived in the time of Socrates and Plato, above fourscore years before the mathematician. Euclid seems to have made speculative geometry his sole and principal study. He has left us a work entitled, *the Elements of Geometry*, in fifteen books. It is however doubted, whether the two last are his. His

elements contain a series of propositions, which are the basis and foundation of all the other parts of the mathematics. This book is considered as one of the most precious monuments which have come down to us from the ancients in respect to natural knowledge. He wrote also upon optics, catoptrics, music, and other learned subjects.

It hath been observed, that the famous M. Pascal, at twelve years of age, without having ever read any book of geometry, or knowing any thing more of that science, except that it taught the method of making exact figures, and of finding their proportions to each other, proceeded by the strength of his genius only, to the 32d proposition of the first book of Euclid.

ARCHIMEDES.

ALL the world knows that Archimedes was of Syracuse, and a near relation to king Hiero. What I have said of him with sufficient extent in speaking of the siege of Syracuse by the Romans, dispenses with my repeating his history in this place. He was, of himself and by natural inclination, solely intent upon whatever is most noble, most exalted, and most abstracted, in geometry;¹ and some of his works of this kind, of which he composed a great number, have come down to us. It was only at the request and warm instances of king Hiero his relation, that he suffered himself at length to be persuaded to bring down his art, from soaring perpetually after intellectual and spiritual things, sometimes to things sensible and corporeal, and to render his reasonings in some sort more evident and palpable to the generality of mankind, in mingling them by experiments with things of use. We have seen what services he did his country at the siege of Syracuse, and the astonishing machines that came from his industrious hands. He however set no value upon these, and considered them as pastime and amusement, in comparison with those sublime reasonings, that gratified his inclination and taste for truth in a quite different manner. The world is never more indebted to these great geometricians than when they descend to act thus for its service: it is a sacrifice, which costs them much, because it tears them from a pleasure of which they are infinitely fond, but to which they think themselves obliged, as indeed they are for the honour of geometry, to prefer the good of the public.

Eudoxus and Architas were the first inventors of this kind of mechanics, and reduced them to practice, to vary and unbend geometry by this kind of amusement, and to prove by sensible and instrumental experiments some problems, which did not appear susceptible of demonstration by reasoning and practice: which are Plutarch's own words.² He cites here the problem of the two mean proportionals for obtaining the duplication of the cube, which could never be geometrically resolved before Descartes did it. Plutarch adds, that Plato was much offended at them on this account, and reproached them with having corrupted the excellency of geometry, in making it descend, like a mean slave, from intellectual and spiritual, to sensible things, and in obliging it to employ matter, which requires the work of the hands, and is the object of a low and servile trade; and that from thenceforth mechanics were separated from geometry, as unworthy of it. This delicacy is singular; and would have deprived human society of a great number of aids, and geometry of the only part of it, that can recommend it to mankind: because if it were not applied to things sensible and of use, it would serve only for the amusement of a very small number of contemplative persons.

The two celebrated geometricians, whom I have distinguished from the multitude, Euclid and Archimedes, universally esteemed by the learned, though in a different degree, show how far the ancients carried their knowledge in geometry. But it must be confessed, that it soared to a quite different height, and almost entirely changed its aspect in the last age, by the new system of the Infinitesimal Analysis, or Dif-

¹ Plut. in Marcel. p. 305.

² Diog. Laert. in Archim. Plut. in Marcel. p. 305

ferential Calculus, for which, no doubt, the particular application bestowed till then upon this study, and the happy discoveries made in it, had prepared the way. The advances we make in science are progressive. Every acquisition of knowledge does not reveal itself, till after the discovery of a certain number of things necessarily previous to it: and when it comes to its turn to disclose itself, it casts a light that attracts all eyes upon it. The period was arrived, wherein geometry was to bring forth the calculus of Infinites. Newton was the first who made this wonderful discovery; and Leibnitz the first who published it. All the great geometricians entered with ardour the paths that had been lately opened for them, in which they advanced with giant steps. In proportion as their boldness in treating infinites increased, geometry extended her bounds. The infinite exalted every thing to a sublimity, and at the same time led on to a facility in every thing, of which no body had ventured so much as to conceive any hopes before. And this is the period of an almost total revolution in geometry.

I have said that Newton first discovered this wonderful calculus, and that Leibnitz published it first. The latter, in 1684, actually inserted the rules of the differential calculus in the Acts of Leipsic, but concealed the demonstrations of them. The illustrious brothers, the Bernoullis, discovered them, though very difficult, and used this calculus with surprising success. The most exalted, the boldest, and most unexpected solutions rose up under their hands. In 1687 appeared Newton's admirable work upon the *Mathematical Principles of Natural Philosophy*, which was almost entirely founded upon this calculus; and he had the modesty not to exclaim against the rules of Mr. Leibnitz. It was generally believed that each of them had discovered this new system, through the conformity of their great talents and learning. A dispute arose on this occasion, which was carried on by their adherents on both sides with sufficient warmth. Newton cannot be denied the glory of having been the inventor of this new system; but Mr. Leibnitz ought not to be branded with the infamous name of a plagiarist, nor to have the shame of a theft laid upon him, which he denied with a boldness and impudence very remote from the character of so great a man.

In the first years the geometry of the infinitesimal calculus was only a kind of mystery. Solutions frequently came out in the Journals, of which the method that produced them was not suffered to appear; and even when it was discovered, only some feeble rays of that science escaped, which were soon lost again in clouds and darkness. The public, or more properly, the small number of those who aspired at elevated geometry, were struck with a useless admiration, that made them never the wiser; and means were found to acquire their applause, without imparting the instruction, with which it ought to have been deserved. Mr. De l'Hopital, that sublime genius, who has done geometry and France so much honour, resolved to communicate the hidden treasures of the new geometry without reserve, and he did so in the famous book called the *Analysis of Infinites*, which he published in 1696. He there unveiled all the secrets of the geometrical infinite, and of the infinite of infinite; in a word, all the different orders of infinites, which rise upon one another, and form the boldest and most amazing superstructure, that human genius has ever ventured to imagine. It is in this manner the sciences attain their perfection.

As, in speaking of geometry, I travel in a country entirely unknown to me, I have scarcely done any thing, besides copying and abridging what I found upon the subject in the Memoirs of the Academy of Sciences. But I thought it incumbent on me to add the advantageous testimony, which Mr. De l'Hopital, of whom I have just spoken, gives in a few lines to Mr. Leibnitz, on account of the invention of the calculus of infinites, in his preface to the *Analysis of Infinites*. "His calculus," says he, "has carried him into regions hitherto unknown; where he has made discoveries that astonished the most profound mathematicians of Europe."

I add here another passage from the preface, but longer, that seems to me a model of the wise and moderate manner, with which one ought to think and speak of the great men of antiquity, even when we prefer the moderns to them. "What the ancients have left us upon these subjects, and especially Archimedes, is certainly worthy of admiration. But, besides their having touched very little upon curves, and that too very superficially, almost all they have done upon that head, are particular and detached propositions, that do not imply any regular and coherent method. They cannot however be justly reproached on that account. It required exceeding force of genius to penetrate through so many obscurities, and to enter first into regions so entirely unknown. If they were not far from them, if they went by round-about ways, at least they did not go astray; and the more difficult and thorny the paths they followed were, the more they are to be admired for not losing themselves in them. In a word, it does not seem possible for the ancients to have done more in their time. They have done what our best moderns would have done in their places; and if they were in ours, it is to be believed they would have had the same views with us. It is therefore no wonder that the ancients went no farther. But one cannot be sufficiently surprised, that great men, and no doubt as great men as the ancients, should continue there so long; and through an almost superstitious admiration for their works, content themselves with reading and commenting upon them, without allowing themselves any farther use of their own talents, than what sufficed for following them, and without daring to venture the crime of thinking sometimes for themselves, and of extending their views beyond what the ancients had discovered. In this manner many studied, wrote, and multiplied books: whilst no advancements at all were made. All the labours of many ages had no other tendency, than to fill the world with obsequious comments, and repeated translations of originals, often contemptible enough. Such was the state of the mathematics, and especially of philosophy, till the period of Monsieur Descartes."

I return now to my subject. We are sometimes tempted to think the time very indifferently employed, that persons of genius bestow upon abstract studies, which seem of no immediate utility, and only proper to satisfy a vain curiosity. To think in this manner is contrary to reason; because we make ourselves judges of what we neither know, nor are qualified to know. It is indeed true, that all the speculations of pure geometry or algebra are not immediately applied to useful things, but they either lead or relate to those that do. Besides a geometrical speculation, which has at first no useful object, comes in time to be applicable to use. When the greatest geometricians of the seventeenth century studied a new curve, which they called the *cycloid*, it was only a mere speculation, in which they solely engaged through the vanity of discovering difficult theorems, in emulation of each other. They did not so much as pretend that they were labouring for the good of the public. The cycloid however was found, upon a strict inquiry into its nature, to be destined to give pendulums all possible perfection, and the measure of time its utmost exactness. Besides the aid which every branch of the mathematics derives from geometry, the study of this science is of infinite advantage in the uses of life. It is always good to think and reason right: and it has been justly said, that there is no better practical logic than geometry. Though the knowledge of numbers and lines absolutely tended to nothing, it would always be the only certain knowledge, of which we are capable by the light of nature, and would serve as the surest means to give our reason the first habitude and bent of truth. It would teach us to operate upon truths, to trace the chain of them, subtle and almost imperceptible as it frequently is, and to follow them to the utmost extent of which they are capable: in fine, it would render the true so familiar to us, that we should be able, on many occasions, to know it at the first glance, and almost by instinct.

The geometrical spirit is not so much confined to geometry, as that it cannot be taken off from it, and transferred to other branches of knowledge. Works of moral philosophy, politics, criticism, and even eloquence, *ceteris paribus*, would have additional beauties, if composed by geometers. The order, perspicuity, distinction, and exactness, which have prevailed in good books for some time past, may very probably have derived themselves from this geometrical spirit, which spreads more than ever, and in some sort communicates itself from author to author, even to those who know nothing of geometry. A great man is sometimes followed by the age in which he lives; and the person, to whom the glory of having established a new art of reasoning may justly be ascribed, was an excellent geometer.

OF ARITHMETIC AND ALGEBRA.

ARITHMETIC is a part of the mathematics. It is a science which teaches all the various operations of numbers, and demonstrates their properties. It is necessary in many operations of geometry, and therefore ought to precede it. The Greeks are said to have received it from the Phœnicians.

The ancients, who have treated arithmetic with most exactness, are Euclid, Nicomachus, Diophantus of Alexandria, and Theon of Smyrna.

It was difficult either for the Greeks or the Romans to succeed much in arithmetic, as both used only the letters of the alphabet for numbers, the multiplication of which, in great calculations, necessarily occasioned abundance of trouble. The Arabic ciphers now used, which have not above four hundred years of antiquity, are infinitely more commodious, and have contributed very much to the improvement of arithmetic.

Algebra is a part of the mathematics, which upon quantity in general expressed by the letters of the alphabet does all the operations done by arithmetic upon numbers. The characters it uses signifying nothing of themselves, may be applied to any species of quantity, which is one of the principal advantages of this science. Besides these characters, it uses certain signs, that greatly abridge its operations, and render them much clearer. By the help of algebra most of the problems of the mathematics may be resolved, provided they are capable of solution. It was not entirely unknown to the ancients. Plato is believed to be the inventor of it. Theon, in his treatise upon arithmetic, gives it the name of *analysis*.

All great mathematicians are well versed in algebra, or at least sufficiently for indispensable use. But this knowledge when carried beyond this ordinary use, is so perplexed, so thick sown with difficulties, so clogged with immense calculations, and in a word, so hideous, that few people have heroic courage enough to plunge into such dark and profound abysses. Certain shining theories, in which refinement of genius seems to have more share than severity of labour, are much more alluring. However, the more sublime geometry is become inseparable from algebra. Mr. Rolle, among the French, has carried this knowledge as high as possible, for which he had a natural inclination and a kind of instinct, that made him devour all the asperity, and I had almost said, horror of this study, not only with patience but delight.

I shall not enter into a circumstantial account of arithmetic and algebra, which far exceeds my capacity, and would neither be useful nor agreeable to the reader.

It has been, for some years, an established custom in the university of Paris, to explain the elements of these sciences in the classes of philosophy, by way of introduction to physics. This last part of philosophy, in its present state, is almost a system of enigmas to those who have not at least some tincture of the principles of the mathematics. Accordingly the most learned professors have conceived it necessary to begin with them, in order to make any progress in physics. Besides the advantages, which result from the mathematics in respect to physics, those who

teach them in their classes, find that the youth, who apply themselves to them, acquire an exactness of mind, and a close way of thinking, which they retain in all the other sciences. These two considerations suffice to show our obligation to the professors, who first introduced this custom, which is now become almost general in the university.

Mr. Rivard, professor of philosophy in the college of Beauvais, has composed a treatise upon this subject, which contains the elements of arithmetic, algebra, and geometry, wherein every thing is said to be explained to a sufficient extent, and with all possible exactness and perspicuity.

OF MECHANICS.

MECHANICS is a science, that teaches the nature of the moving powers, the art of designing all kinds of machines, and of removing any weight by the means of levers, wedges, pulleys, wheels, &c. Many, who consider mechanics only with regard to their practice, set little value upon it, because it seems to belong solely to workmen, and to require the hands only, and not the understanding; but a different judgment is passed upon it, when considered with regard to their theory, which is capable of employing the most exalted genius. It is besides the science that guides the hands of the workman, and by which he brings his inventions to perfection. A slight idea, dropped even by the ignorant, and the effect of chance, is afterwards often pursued by degrees to supreme perfection, by persons profoundly skilled in geometry and mechanics. This happened in respect to telescopes, which owe their birth to the son of a Dutchman who made spectacles. Holding a convex glass in one hand, and a concave one in the other, and looking through them without design, he perceived that distant objects appeared much larger, and more distant than when he saw them with the naked eye. Galileo, Kepler, and Descartes, by the rules of dioptrics, carried this invention, gross at it was in its beginning, a great way; which has since been much more improved.

The most celebrated authors of antiquity, who have wrote upon the mechanics, are Architas of Tarentum; Aristotle; Æneas his contemporary, whose tactics are still extant, in which he treats of machines of war, a work which Cines, the friend of Pyrrhus, abridged; Archimedes particularly, of whom we have spoken before; Athenæus, who dedicated his book upon machines, to Marcellus, that took Syracuse; and lastly, Hero of Alexandria, by whom we have several treatises.

Of all the works upon mechanics which have come down to us from the ancients, only those of Archimedes treat this science in all its extent; but often with great obscurity. The siege of Syracuse shows how high his abilities in mechanics rose. It is no wonder, that the moderns, after the many physical discoveries made in the last century, have carried that science much farther than the ancients. The machines of Archimedes, however, still amaze the most profound in the mechanics of our times.

If all the advantages of mechanics were to be particularly shown, it would be necessary to describe all the machines used heretofore on different times and occasions, both in war and peace, as well as those now used either for necessity or diversion. It is upon the principles of this science, that the construction of wind and water mills for different uses is founded; of most of the machines used in war, both in the attack and defence of places; of those which are employed in great numbers for the raising of heavy weights in building, and of water by pumps, wheels, and all the various engines for that use; in a word, we are indebted to mechanics for an infinity of very useful and curious works.

OF STATICS.

STATICS is a science, that makes part of the mixed mathematics. It considers solid bodies in respect to their weight, and lays down rules for moving them, and for placing them in *equilibrium*.

The great principle of this science is, that when

the masses of two unequal bodies are in reciprocal proportion to their velocities, that is to say, when the quantity or mass of the one contains that of the other, as much as the swiftness of the second contains that of the first, their quantities of motion, or powers, are equal. From this principle it follows, that with a very small body a much greater may be moved; or, which is the same thing, that with a certain given power any weight whatsoever may be moved. For this purpose the velocity of the moving power is only to be augmented in proportion to the weight of the body to be moved.

This appears evidently in the lever, on which almost all machines depend. The point on which it is supported, is called the *fulcrum*, or point of support. The extent from that point to one of the extremities, is called the distance from the point of support, or *radius*. The bodies at the two extremities of the lever, are called weights. If one of these weights be only half the other, and its distance twice as far from the fulcrum, the two weights will be in *equilibrium*, because then the velocity of the least will contain that of the greatest, in the same manner as the mass of the greatest will contain that of the least: for their velocities are in the same proportion to each other, as their distances from the point of support. According to this principle, by augmenting the distance of the weight which is but half the other, the lighter will raise up the heavier.

It was upon this principle that Archimedes told king Hiero, that if he had a place, where he could fix himself and his instruments, he could move the earth. To prove what he said, and to show that prince, that the greatest weight might be moved with a small force, he made the experiment before him upon one of the largest of his galleys, which had double the lading it used to carry put on board; and which he made move forward upon the land without difficulty, by only moving with his hand the end of a machine he had prepared for that purpose.

Hydrostatics considers the effects of weight in liquids, whether in liquids alone, or in liquids acting upon solids, or reciprocally. It was by hydrostatics, that Archimedes discovered what a goldsmith had stolen from king Hiero's crown, in which he had mingled other metal with gold. His joy was so great on having found this secret, that he leaped out of the bath without considering he was naked, and solely intent upon his discovery, went home in that condition, to make the experiment, crying out through the streets, *I have found it, I have found it.*

CHAPTER II. OF ASTRONOMY.

Mr. Cassini has left us an excellent treatise upon the origin and progress of astronomy, which I shall only abridge in this place.²

It is not to be doubted but astronomy was invented from the beginning of the world. As there is nothing more surprising than the regularity of those great luminous bodies, that turn incessantly round the earth, it is easy to judge, that one of the first objects of the curiosity of mankind was to consider their courses, and to observe the periods of them. But it was not curiosity alone that induced men to apply themselves to astronomical speculations: necessity itself may be said to have obliged them to it. For if the seasons are not observed, which are distinguished by the motion of the sun, it is impossible to succeed in agriculture. If the times proper for making voyages were not previously known, commerce could not be carried on. If the duration of the month and year was not determined, a certain order could not be established in civil affairs, nor the days allotted to the exercise of religion be fixed. Thus as neither agriculture, commerce, polity, nor religion could dispense with astronomy, it is evident that mankind were obliged to apply themselves to that science from the beginning of the world.

What Ptolemy³ relates of the observations of the

heavens, by which Hipparchus reformed astronomy almost two thousand years ago, proves sufficiently, that in the most ancient times, and even before the flood, this science was much studied. And it is no wonder, that several of the astronomical observations, made during the first ages of the world, should be preserved even after the flood, if what Josephus⁴ relates be true, that the descendants of Seth, to preserve the remembrance of the celestial observations which they had made, engraved the principal of them upon two pillars, the one of brick and the other of stone; that the pillar of brick withstood the waters of the deluge, and that even in his time there were remains of it to be seen in Syria.

It is agreed that astronomy was cultivated in a particular manner by the Chaldeans. The height of the tower of Babel, which the vanity of men erected about a hundred and fifty years after the flood, the level and extensive plains of that country, the nights in which they breathed the fresh air after the troublesome heat of the day, an unbroken horizon, a pure and serene sky, all conspired to engage that people to contemplate the vast extent of the heavens, and the motions of the stars.⁵ From Chaldea astronomy passed into Egypt, and soon after was carried into Phœnicia, where they began to apply its speculative observations to the uses of navigation, by which the Phœnicians soon became masters of the sea and of commerce.

What made them bold in undertaking long voyages, was their custom of steering their ships by the observation of one of the stars of the Little Bear, which being near the immovable point of the heavens, called the pole, is the most proper to serve as a guide in navigation. Other nations, less skilful in astronomy, observed only the Great Bear in their voyages.⁶ But as that constellation is too far from the pole to be capable of serving as a certain guide in long voyages, they did not dare to stand out so far to sea, as to lose sight of the coast: and if a storm happened to drive them into the main ocean, or upon some unknown shore, it was impossible for them to know by the heavens into what part of the world the tempest had carried them.

Thales having at length brought the science of the stars from Phœnicia into Greece, taught the Greeks to know the constellation of the little Bear, and to make use of it as their guide in navigation.⁷ He also taught them the theory of the motion of the sun and moon, by which he accounted for the length and shortness of the days; determined the number of the days of the solar year, and not only explained the causes of eclipses, but showed the art of foretelling them, which he even reduced to practice, foretelling an eclipse which happened soon after. The merit of a knowledge so uncommon in those days made him pass for the oracle of his times, and occasioned his being given the first place among the seven sages of Greece.⁸

Anaximander was his disciple, to whom Pliny⁹ and Diogenes Laërtius ascribe the invention of the sphere, that is to say, the representation of the terrestrial globe; or, according to Strabo,¹⁰ geographical maps. Anaximander is said also to have erected a gnomon at Sparta, by means of which he observed the equinoxes and solstices; and to have determined the obliquity of the ecliptic more exactly than had ever been done before; which was necessary for dividing the terrestrial globe into five zones, and for distinguishing the climates, that were afterwards used by geographers for showing the situation of all the places of the earth.

Upon the instructions which the Greeks had received from Thales and Anaximander, they ventured into the main sea, and sailing to various remote countries, planted many colonies in them.

Astronomy was soon repaid for the advantages she

had procured navigation. For commerce having opened the rest of the world to the learned of Greece, they acquired great light from their conferences with the priests of Egypt, who made the science of the stars their peculiar profession. They learned also many things from the philosophers of the sect of Pythagoras in Italy, who had made so great a progress in this science, that they ventured to reject the received opinions of all the world concerning the order of nature, and ascribed perpetual rest to the sun, and motion to the earth.¹

Meton distinguished himself very much at Athens by his particular application to astronomy, and by the great success with which his labours were rewarded.² He lived in the time of the Peloponnesian war; and when the Athenians were fitting out a fleet against Sicily, foreseeing that expedition would be attended with fatal consequences, he counterfeited the madman to avoid having a share in it, and setting out with the other citizens. It was he that invented what is called *The Golden Number*, in order to make the lunar and solar years agree.³ That number is a revolution of nineteen years, at the end of which the moon returns to the same place and days, and renews its course with the sun, at the difference of about an hour and some minutes.

The Greeks improved also from their intercourse with the Druids,⁴ who, among many other things, says Julius Cæsar, which they taught their youth, instructed them particularly in the motion of the stars, and the magnitude of the heavens and the earth, that is to say, in astronomy and geography.

This kind of learning is more ancient among the Gauls, than is generally imagined. Strabo⁵ has preserved a famous observation, made by Pytheas at Marseilles above two thousand years ago, concerning the proportion of the shadow of the sun to the length of a gnomon at the time of the solstice. If the circumstances of this observation were exactly known, it would serve to resolve an important question, which is, whether the obliquity of the ecliptic be subject to any change.

Pytheas was not contented with making observations in his own country.⁶ His passion for astronomy and geography made him run over all Europe, from the pillars of Hercules to the mouths of the Tanais. He went by the western ocean very far towards the Arctic pole, and observed that in proportion as he advanced the days grew longer at the summer solstice, so that in a certain climate there was but three hours of night, and farther only two, till at last in the Island of Thule, the sun rose almost as soon as it set, the tropic continuing entirely above the horizon of that isle; which happens in Iceland, and the northern parts of Norway, as modern accounts inform us. Strabo, who imagined that these climates were uninhabitable, accuses Pytheas of falsehood, and blames the credulity of Eratosthenes and Hipparchus, who, upon Pytheas's authority, said the same thing of the Island of Thule. But the accounts of modern travellers having fully justified Pytheas, we may give him the glory of being the first, who advanced towards the pole to countries before believed uninhabitable, and who distinguished climates by the different lengths of days and nights.

About Pytheas's time, the learned of Greece having conceived a taste for astronomy, many great men among them applied themselves to it in emulation of each other. Eudoxus, after having been some time the disciple of Plato, was not satisfied with what was taught upon that subject in the schools of Athens. He therefore went to Egypt to cultivate that science at its source, and having obtained a letter of recommendation from Ageilaus king of Sparta to Nectanebus king of Egypt, he remained sixteen months with the astronomers of that country, in order to improve himself by consulting them. At his return, he com-

posed several books upon astronomy, and among others the description of the constellations, which Aratus turned into verse some time after by the order of Antigonus.

Aristotle, the contemporary of Eudoxus, and also Plato's disciple, made use of astronomy for improving physics and geography. By the observations of astronomers, he determined the figure and magnitude of the earth.⁷ He demonstrated that it was spherical by the roundness of its shadow, which appeared upon the disk of the moon in eclipses, and by the inequality of the meridian altitudes which are different according to their distance from, or approach to the poles. Callisthenes, who was in the train of Alexander the Great, having had occasion to go to Babylon, found astronomical observations there, which the Babylonians had made during the space of nineteen hundred and three years, and sent them to Aristotle.

After Alexander's death, the princes who succeeded him in the kingdom of Egypt, took so much care to attract the most famous astronomers to their courts by their liberality, that Alexandria, the capital of their kingdom, soon became, to use the expression, the seat of astronomy. The famous Canon made many observations there, but they have not come down to us. Aristyllus and Timochares observed the declination of the fixed stars there, the knowledge of which is absolutely necessary to geography and navigation. Eratosthenes made observations upon the sun in the same city, which served him for measuring the circumference of the earth.⁸ Hipparchus, who resided also at Alexandria,⁹ was the first who laid the foundation for a system of astronomy, when upon the appearance of a new fixed star, he took the number of the fixed stars, in order that future ages might know, whether any more new ones appeared. The fixed stars amounted then to a thousand and twenty-two. He not only described their motion round the poles of the ecliptic, but applied himself also to regulate the theory of the motions of the sun and moon.¹⁰

The Romans, who aspired to the empire of the world, took care at different times to cause descriptions of the principal parts of the earth to be made, a work which implied some knowledge of the stars. Scipio Africanus the younger, during the war with Carthage, gave Polybius ships, in order to survey the coasts of Africa, Spain, and the Gauls.

Pompey corresponded with the learned astronomer and excellent geographer, Ptolemy,¹¹ who undertook to measure the circumference of the earth by celestial observations, made at different places under the same meridian,¹² in order to reduce into degrees, the distances, which the Romans till then had measured only by *stadia* (or furlongs) and miles.

In order to settle the difference of climates, the difference of the lengths of shadows was observed, principally at the time of the solstices and equinoxes. Gnomons and obelisks had been set up for this purpose in several parts of the world, as Pliny and Vitruvius inform us,¹³ who have transmitted many of those observations down to posterity. The greatest obelisks were those of Egypt. Julius and Augustus Cæsar caused some of them to be brought thence to Rome, as well to serve for ornaments of the city as to give the exact measures of the proportion of shadows. Augustus caused one of the greatest of these obelisks to be placed in the field of Mars, which was a hundred and eleven feet high, without the pedestal.¹⁴ He caused foundations to be made to it as deep as the obelisk was high; and when the obelisk was placed upon them, he ordered a meridian line to be drawn at bottom, of which the divisions were made with plates of brass fixed in stone, to show the lengthening or shortening of the shadows every day at noon, according to the difference of the seasons. And to show this difference with greater exactness, he caused a ball to be placed upon the point of that obelisk, which is still in

ne field of Mars at Rome, lying in the ground across the cellars of houses built upon its ruins. By comparing the shadows of this obelisk with those observed in several other parts of the world, the knowledge of the latitudes so necessary to the perfection of geography was attained.

Augustus in the mean time caused particular descriptions of different countries to be made, and principally that of Italy, where the distances were marked by miles along the coasts, and upon the great roads.¹ And at length, in that prince's reign, the general description of the world,² at which the Romans had laboured for the space of two ages, was finished from the memoirs of Agrippa, and set up in the midst of Rome, in a great portico built for that purpose. The Itinerary, ascribed to the emperor Antoninus, may be taken for an abridgment of this great work. For this Itinerary is in effect only a collection of the distances which had been measured throughout the whole extent of the Roman empire.

In the reign of that wise emperor, astronomy began to assume a new appearance. For Ptolemy, who may be called the restorer of this science, improving from the knowledge of his predecessors in it, and adding the observations of Hipparchus, Timocharis, and the Babylonians to his own, composed a complete body of astronomy in an excellent book entitled, *The great Construction*, which contains the theory and tables of the motion of the sun, moon, and other planets, and of the fixed stars. Geography is no less indebted to him than astronomy, as we shall see in the sequel.

As great works are never perfect in their beginnings, we must not be surprised, that there are many things to amend in Ptolemy's geography. Many ages elapsed before any body undertook it. But the Arabian princes, who conquered the countries where astronomy and geography were particularly cultivated and professed, had no sooner declared it their intention to make the utmost improvements in those sciences, than persons capable of contributing to the execution of their design were immediately found. Al-mamon, caliph of Babylon, having at that time caused Ptolemy's book entitled *the great Construction*, which the Arabians called *Almagest*, to be translated out of Greek into Arabic, many observations were made by his orders; by means of which the declination of the sun was discovered to be less by one third of a degree than that laid down by Ptolemy; and that the motion of the fixed stars was not so slow as he believed it to be. By the order of the same prince, a great extent of country under the same meridian was measured, in order to determine the length of a degree of the earth's circumference.

Thus astronomy and geography were gradually improved. But the art of navigation made a much more considerable progress in a short time by the help of the compass, of which I shall speak in the sequel.

Almost at the same time that the compass began to be used, the example of the caliphs excited the princes of Europe to promote the improvement of astronomy. The emperor Frederic II. not being able to suffer that the Christians should have less knowledge of this science than the barbarians, caused the *Almagest* of Ptolemy to be translated into Latin from the Arabic, from which version Johannes de Sacrobosco, professor in the university of Paris, extracted his work concerning the sphere, upon which the most learned mathematicians of Europe have written commentaries.

In Spain, Alphonso king of Castile was at a truly royal expense in assembling learned astronomers from all parts.³ By his orders they applied themselves to the reformation of astronomy, and composed new Tables, which from his name were called the Alphonine Tables. They did not succeed at first in establishing the hypothesis of the motion of the fixed stars, which they supposed too slow; but Alphonso afterwards corrected their Tables, which have since been

augmented, and reduced into a more commodious form by different astronomers.

This work awakened the curiosity of the learned of Europe, who immediately invented several kinds of instruments for facilitating the observations of the stars. They calculated Ephemerides, and made tables for finding the declination of the planets at all times, which with the observation of the meridian altitudes, shows the latitudes at land and sea. They laboured also to facilitate the calculation of eclipses, by the observation of which longitudes are found. The fruit of these astronomical labours was the discovery of many countries unknown before. I shall speak of them elsewhere.

France has also produced many illustrious men, who excelled in astronomy, because it has had great princes from time to time, who have taken care to excite their subjects by rewards to apply to it. Charles V., surnamed the Wise, caused many mathematical books to be translated into French. He founded two professorships of mathematics in the college of M. Gervais at Paris, to facilitate the study of those sciences to his subjects. They flourished principally in the following century through the institution of two professorships in the royal college by Francis I. for teaching the mathematics in the capital city of his kingdom. This school produced a considerable number of learned men, who enriched the public with many astronomical and mathematical works, and formed illustrious disciples, whose reputation almost obscured that of their masters.

Germany and the northern nations also produced many excellent astronomers, among whom Copernicus distinguished himself in a particular manner. But the famous Tycho Brahe much exceeded all the astronomers that had preceded him. Besides the Theory and the Tables of the sun and moon, and many fine observations which he made, he composed a new Catalogue of the fixed stars with so much exactness, that the author might from that work alone deserve the name, which some have given him, of Restorer of astronomy.

Whilst Tycho Brahe was making observations in Denmark, several famous astronomers, who assembled at Rome under the authority of pope Gregory XIII., laboured with success, in correcting the errors which had insensibly crept into the ancient calendar, through the precession of the equinoxes, and the anticipation of the new moons. These errors would in process of time have entirely subverted the order established by the councils for the celebration of the movable feast, if the calendar had not been reformed according to the modern observations of the motions of the sun and moon compared with the ancient.

In the last and present age, an infinity of new discoveries have been made, which have rendered astronomy incomparably more perfect than it was when it first began to be taught in Europe. The celebrated Galileo, by the good use he made of the invention of telescopes, was the first who discovered things in the heavens, which had long passed for incredible. Descartes may be ranked among the improvers of astronomy: for the book he composed upon the principles of philosophy, shows that he had taken no less pains to know the motions of the stars, than the other parts of physics: but he confined himself more to reasoning than observation. Gassendi applied himself more to practical astronomy, and published a number of very important observations.

The establishment of the Royal Academy of Sciences may justly be considered as the means that has contributed most to the credit and improvement of astronomy in France, by the incredible emulation, which the desire of supporting their reputation, and distinguishing themselves, excites in a body of learned men. Louis XIV. having caused the Observatory to be built, of which the design, magnificence, and solidity are equally admirable, the Academy, to answer his majesty's intention, in erecting that superb edifice, applied themselves with incredible industry to whatever might contribute to the improvement of astronomy. I shall not particularize in this place the important discoveries that have been the fruits of this

¹ Plin. l. iii. c. 3.

² Ibid. c. 2.

³ Calvis. ad an. 1252.

institution the learned works of this society, nor the great men who have done, and still continue to do it so much honour. Their names and abilities are known to all Europe, which does their merit all the justice it deserves.

REFLECTIONS UPON ASTRONOMY.

I cannot conclude the article of astronomy without making two reflections with the authors of the learned Memoirs of the Academy of Sciences.

FIRST REFLECTION.

Upon the Satellites of Jupiter.

WE are naturally enough inclined, as I have already observed in speaking of geometry, to consider as useless, and to despise what we do not understand. We have one moon to light us by night; and what signifies it to us, says somebody, that Jupiter has four? (the moons or satellites of Jupiter are the same thing.) And therefore so many laborious observations, and fatiguing calculations, for knowing their revolutions? We shall be never the wiser for them, and nature, which has placed those little stars out of the reach of our eyes, does not seem to have made them for us. In consequence of so plausible a way of reasoning, observing them with the telescope, and studying them with particular attention, ought to be neglected. And what a loss would not that have been to the public!

The method of determining the longitudes of the places of the earth by the means of the eclipses of Jupiter's satellites, which the Royal Academy first began to put in practice, was found so exact, that it was judged that the correction of geography in general, and the making of true maps and charts for the use of navigation, might be undertaken by this means. This could not be done before, because the eclipses of the moon had been the only means used for finding, but with little exactness, the difference of the longitudes of some remote places. And these eclipses that usually happen only once or twice a year, are much less frequent than those of the satellites of Jupiter, which happen at farthest every two days, though all of them cannot be observed in the same place, as well through the difference of the hours during which Jupiter is above the horizon, as upon account of the weather, which often prevents observations.

This undertaking to work for the improvement of geography in a new and more perfect manner than had ever been imagined before, being agreeable to his majesty's intentions in the institution of his Academy of Sciences, it was his pleasure, that persons should be chosen, capable of executing the instructions to be given them in different places, and that proper occasions should be taken for sending them into remote countries. The history of these voyages is exactly related in the Memoirs of the Academy of Sciences, and is, in my opinion, one of the circumstances of the reign of Louis XIV. which will do him most honour in ages to come. When his majesty was informed of the observations that the members of the Academy of Sciences had taken by his order in different places out of the kingdom, he commanded them to apply themselves in making a map of France with the utmost exactness possible. This had been often attempted, but without success, for want of the means we have at this time, which are pendulum-clocks, and the great telescopes now used for discovering the eclipses of Jupiter's satellites, which is the most certain method for determining the difference of meridians. Had astronomy in all its extent no other advantage to mankind, than what is derived from the satellites of Jupiter, it would sufficiently justify those immense calculations, those assiduous and scrupulous observations, that great number of instruments constructed with so much care, and the superb building solely erected for the use of this science. The least knowledge of the principles of geography and navigation shows, that since Jupiter's four moons have been known, they have been of more use in respect to those sciences, than our moon itself; that they now serve, and always will, for making sea charts vastly more correct than those of the ancients, which in all

probability will save the lives of a great number of mariners.

SECOND REFLECTION.

Upon the Amazing Scene which Astronomy opens to our View.

Though astronomy were not so absolutely necessary as it is to geography and navigation, it would be highly worthy of the curiosity of all thinking men, from the grand and superb scene which it opens to their view. To give some idea of it, I shall only repeat in few words, what the observations of astronomers have taught us of the immense volume of some of those great orbs, that move over our heads.

The stars are divided into planets and fixed stars.

The planets (a Greek word that signifies *errant* or *wandering*) are so called because they are not always at an equal distance either from each other, or from the fixed stars, whereas the latter are always at the same distance from each other. The planets have no light of their own, and are only visible by the reflection of that of the sun. Astronomers have observed, that they have a particular motion of their own, besides that which they have in common with the rest of the heavens. They have computed this motion, and from the time which each planet employs in one revolution, have with reason established its elevation and distance.

The MOON of all the planets is the nearest to the earth, and almost sixty times less.

The SUN is not a body of the same species as the earth, and the rest of the planets, nor solid like them. It is a vast ocean of light, that boils up perpetually and diffuses itself with incessant profusion. It is the source of all that light which the planets only reflect to each other after having received it from him.

The EARTH is a million of times less than the globe of the sun, and thirty-three millions of leagues distant from it. During so many ages the sun has suffered no diminution. Its diameter is equal at this day to the most ancient observations of it, and its light as vigorous and abundant as ever.

JUPITER is five times as far from the sun as the earth is, that is to say, a hundred and sixty-five millions of leagues. He turns round upon his own axis every ten hours.

SATURN is thirty years in his revolution round the sun. He is twice as far from it as Jupiter, and consequently ten times more distant than the earth, that is to say, three hundred and thirty millions of leagues.

The FIXED STARS are, with respect to the earth, at a distance not to be conceived by human intellect. According to the observations of Mr. Huygens, the distance of the earth from the nearest fixed star, is with respect to that of the sun as one to twenty-seven thousand six hundred and sixty-four. Now we have said, that the distance of the earth from the sun is thirty-three millions of leagues. The least distance, therefore, of the earth from the fixed stars is nine hundred and two billions, nine hundred and twelve millions of leagues, that is to say, twenty-seven thousand six hundred and sixty-four times the distance from this to the sun, which, as we have said, is thirty-three millions of leagues. The same Mr. Huygens supposes, and infallible experiments have proved him right, that a cannon bullet flies about a hundred toises (above two hundred yards) in a second. Supposing it to move always with the same velocity, and measuring the space it flies according to that calculation, he demonstrates that a cannon bullet would be almost twenty-five years in arriving at the sun; and twenty-seven thousand six hundred and sixty-four times twenty-five years in reaching the fixed star nearest the earth. What then must we think of the fixed stars infinitely more remote from us?

The stars are innumerable. The astronomers of old counted a thousand and twenty-two of them. Since the use of astronomical glasses, millions that escape the eye appear. They all shine by their own light, and are all, like the sun, inexhaustible sources of light. And, indeed, if they received it from the

1 A billion is ten hundred thousand millions.

sun, it must necessarily be very feeble after a passage of so enormous a length: they must also transmit it to us at the same distance, by a reflection, that would make it still much weaker. Now it would be impossible, that a light which had undergone a reflection, and ran twice the space of 902,912,000,000 leagues, should have the force and liveliness that the light of the fixed stars has. It is, therefore, certain, that they are luminous of themselves, and in a word, all of them so many suns.

But the question here is only the magnitude and remoteness of those vast bodies. When we consider them together, is it possible to support the view, or rather the idea of them? The globe of the sun a million of times greater than the earth, and distant thirty-three millions of leagues! Saturn, almost four thousand times as big, and ten times farther from the sun than the earth! No comparison between the planets and the other fixed stars! The whole immense space which contains our sun and planets, is but a small part of the universe. As many of the like spaces as

of fixed stars. What then must the immensity of the whole firmament be, that contains all these different bodies within its extent? Can we so much as think of it, can we fix our view upon it for some moments, without being confounded, amazed, and terrified? It is an abyss, in which we lose ourselves. What then must be the greatness, power, and immensity of him, who with a single word both formed these enormous masses, and the spaces that contain them! And these wonders, incomprehensible to human understanding, the holy scripture, in a style that belongs only to God, expresses in one word, "and the stars." After having related the creation of the sun and moon, it adds, "he made also the stars." Is there any thing requisite, to render the incredulity and ingratitude of mankind inexcusable, besides this book of the firmament written in characters of light? And has not the prophet reason to exclaim, full of religious admiration: "the heavens declare the glory of God, and the firmament reveals the wonders of his power."

OF GEOGRAPHY.

SECTION I.—OF THE MOST DISTINGUISHED GEOGRAPHERS OF ANTIQUITY.

CONQUESTS and commerce have aggrandized geography, and still contribute to its perfection. Homer, in his poems upon the Trojan war and the voyages of Ulysses, has mentioned a great number of nations and countries, with particular circumstances relating to many places. There appears so much knowledge of this kind in that great poet, that Strabo¹ considered him in some sort as the first and most ancient of geographers.

It is certain that geography has been cultivated from the earliest times; and besides the geographical authors come down to us, we find many others cited by them, whose works time has not spared. The art of representing the earth, or some particular region of it, upon geographical tables and maps, is even very ancient.² Anaximander, the disciple of Thales, who lived above five hundred years before Christ, had composed works of this kind, as we have observed above.

Alexander's expedition, who extended his conquests as far as the frontiers of Scythia, and into India, opened to the Greeks a positive knowledge of many countries very remote from their own. That conqueror had two engineers, Diogenes and Bæton, in his service, who were ordered to measure his marches. Pliny and Strabo³ have preserved those measures; and Arrian⁴ has transmitted down to us the particulars of the navigation of Nearchus and Onesicritus, who sailed back with Alexander's fleet from the mouths of the Indus into those of the Tigris and Euphrates. The Greeks having reduced Tyre and Sidon, had it in their power to inform themselves particularly of all the places to which the Phœnicians traded by sea, and their commerce extended as far as the Atlantic Ocean. Alexander's successors in the East extended their dominions and knowledge still farther than him, and even to the mouths of the Ganges. Ptolemy Evergetes carried his into Abyss-

sinia, as the inscription of the throne of Adulis, according to Cosmas the hermit proves.⁵ About the same time Eratosthenes, the librarian of Alexandria endeavoured to measure the earth, by comparing the distance between Alexandria and Syene, a town situated under the tropic of Cancer, with the difference of latitude of those places, which he concluded from the meridian shadow of a gnomon erected at Alexandria at the summer solstice.

The Romans, having made themselves masters of the world, and united the East and West under the same power, it is not to be doubted, but geography must have derived great advantages from it. It is easy to perceive, that most of the completest geographical works were compiled during the Roman emperors. The great roads of the empire measured in all their extent, might have contributed much to the improvement of geography; and the Roman Itineries, though often altered and incorrect, are still of great service in composing some maps, and in the inquiries necessary to the knowledge of the ancient geography. *Antoninus's Itinerary*, as it is commonly called, because supposed to have been compiled in his reign, is ascribed by the learned to the cosmographer Æthicus. We have also a kind of *Table* or oblong *Map*, which is called the *Theodosian Table*, from its being conjectured to have been composed about the time of Theodosius. The name of *Peuting-er* is also given to this table, which is that of a considerable citizen of Augsburg in Germany, in whose library it was found, and whence it was sent to the famous Ortelius, the greatest geographer of his time.

Though geography be but a very short part of Pliny's natural history, he however often gives us a detail of considerable extent. He usually follows the plan laid down for him by Pomponius Mela, a less circumstantial, but elegant author.

Strabo and Ptolemy held the first rank among the ancient geographers, and dispute it with each other. Geography has more extent, and takes in a greater part of the earth in Ptolemy; whilst it seems equally circumstantial every where: but it is that extent itself that renders it the more suspected, it not being easy for it to be every where exact and correct. Strabo relates a great part of what he writes upon the evidence of his own eyes, having made many voyages for the greater certainty of his accounts; and is very succinct upon what he knows only from the

¹ The reader no doubt has observed, from all that has been said of astronomy, the essential relation of that science to Geography and Navigation. M. D'Anville, Geographer Royal, with whom I am particularly intimate, has been pleased to impart memoirs of geography to me, of which I have made great use.—*Rollin*.

reports of others. His geography is adorned with many historical facts and discussions. He affects every where to remark in respect to each place and country the great men they have produced, and that do them honour. Strabo is a philosopher as well as a geographer; and good sense, solidity of judgment, and accuracy, display themselves throughout his whole work.

Ptolemy having disposed his geography in general by longitudes, and latitudes, the only method of attaining any certainty in it, Agathodamon, his countryman, and of Alexandria as well as himself, reduced the whole into geographical charts or maps.

The authors, of whom I have now spoken, are in a manner the principal sources, from which the knowledge of the ancient geography is to be acquired. And if the particular description of the principal countries of Greece by Pausanias be added to it, with some lesser works, that chiefly consist of brief descriptions of sea coasts, among others those of the Euxine and Erythrean seas by Arrian, and the account of cities compiled from the Greek authors by Stephanus Byzantinus, we have almost all that remains of the geographical works of antiquity.

It is not to be imagined, that the ancients, whom I have cited, had no thoughts of using the helps astronomy was capable of affording geography. They observed the difference of the latitudes of places by the length of meridian shadows at the summer solstice. They determined also that difference from the observation of the length of the longest days in each place. It was well known by the ancients, that by comparing the time of the observation of an eclipse of the moon in places situated under different meridians, the difference of the longitudes of those places might be known. But, if the ancients understood the theory of these different observations, it must be allowed, that the means they employed in it were not capable of leading them to a certain degree of exactness, to which the moderns only attained by the help of great telescopes, and the perfection of clocks. We cannot help perceiving the want of exactness in the observations of the ancients, when we consider, that Ptolemy, all-great cosmographer as he was, and though an Alexandrian, was mistaken about the fifth of a degree in the latitude of the city of Alexandria, which was observed in the last century, by the order of the king of France, and the application of the Royal Academy of Sciences.

But, though there is reason to conclude, that the art of making geographical maps was very far from being carried among the ancients to that degree of perfection it is in our days, and though we may believe, that even in the time of the Romans, the use of those maps was not so common as at present; an ancient monument of our Gaul itself informs us, that young persons were taught geography by the inspection of maps. That monument is an oratorical discourse spoken at Autun in the reign of Constantius, wherein the rhetorician Eumenes expressly tells us, that in the porch of the public school of that city, young students had recourse to a representation of the disposition of all the lands and seas of the earth, in which the courses of the rivers and the windings of coasts were particularly described. "*Videat in illis porticibus Juventus et quotidie spectet omnes terras, et cuncta maria, et quicquid invictissimi Principes, urbium, gentium, nationum aut pietate restitunt, aut virtute devincunt aut terrore. Si quidem illic, ut ipsi vidisti, credo instruendæ pueritiæ causæ, quo manifestius oculis discerentur, quæ difficiliter percipiuntur auditu, omnium, cum nominibus suis, locorum situs, spatia, intervalia descripta sunt, quicquid ubique fluminum oritur et conditur, quacunque se littorum sinus flectunt, quo vel ambitu cingit Orbem, vel impetu irrumpit Oceanus.*"¹

SECTION II.—LANDS KNOWN TO THE ANCIENTS.

To know what part of the surface of the earth was known to the ancients, is of some use.

On the side of the West which we inhabit, the

Atlantic Ocean and the British Isles limited the knowledge of the ancients. The Fortunate Islands, now called the Canaries, seemed to them the remotest part of the ocean between the south and the west; and it was for that reason Ptolemy reckoned the longitude of the meridian from those islands; in which he has been followed by many eastern and Mahometan geographers, and even by the French and most of the moderns. The Greeks had some slight knowledge of Hibernia, the most western of the British Islands, even before the Romans had conquered Great Britain.² The ancients had but very imperfect notions of the northern countries as far as the Hyperborean or icy Sea. Though Scandinavia was known, that country and some others of the same continent, were taken for great islands. It is hard to determine positively what place the ancients understood by *ultima Thule*.³ Many take it for Iceland. But Procopius seems to make it a part of the continent of Scandinavia. It is certain that the knowledge, which the ancients had of Samatia and Scythia, was very far from extending to the sea, which now seems to bound Russia and great Tartary on the north and east sides. The discoveries of the ancients went no farther than the Rhiphean mountains, the chain of which actually divides Russia in Europe from Siberia.

It is evident that the ancients had no great knowledge of the northern part of Asia, when we consider that most of their authors, as Strabo, Mela, Pliny,⁴ imagined that the Caspian Sea was a gulf of the Hyperborean Ocean, whence it issued by a long canal. On the side of the East, the ancients seem to have known only the western frontier of China. Ptolemy seems to have had a glimpse of some part of the southern coast of China, but a very imperfect one. The great islands of Asia, especially those of Japan were unknown to the ancients. Only the famous Taprobana is to be excepted, the discovery of which was a consequence of Alexander's expedition into India, as Pliny informs us.

It remains for me to speak of the southernmost part of Africa.⁵ Though many have supposed that in a voyage of extraordinary length they had sailed round this part of the world, Ptolemy however seems to insinuate, that it had escaped the knowledge of the ancients. Every body knows that it lies almost entirely within the torrid zone, which most of the ancients believed uninhabitable near the Equinoctial Line; for which reason Strabo goes very little farther than Meroë in Ethiopia. Ptolemy, however, and some others, have carried their knowledge along the eastern coast of Africa as far as the Equator, and even to the island of Madagascar, which he seems to intend by the name of *Menuthia*.⁶

It was reserved for the voyages undertaken by the Portuguese in the fifteenth century, in order to go to India by sea, to discover the greater part of the coasts of Africa upon the Atlantic Ocean, and especially the passage by the south of the most extreme cape of Africa. That passage having been discovered, several European nations, led by the hopes of a rich traffic, ran over the Indian Sea that washes the coasts of Asia, discovered all the islands in it, and penetrated as far as Japan. The conquests and settlement of the Russians in the northern part of Asia have completed our knowledge of that part of the world. To conclude, every body knows, that, about the end of the fifteenth century, a new world, situated on the west in respect to ours, beyond the Atlantic ocean, was discovered by Christopher Columbus under the auspices of the crown of Castile.

SECTION III.—WHEREIN THE MODERN GEOGRAPHERS HAVE EXCELLED THE ANCIENT.

IT would be blindness, and shutting one's eyes against demonstration, not to admit that the modern geography abundantly surpasses the ancient. It is well known that the measures of the earth now

¹ Arist. de mundo, c. 3.

³ Strab. l. ii. p. 121. Mel. l. iii. Plin. l. vi. c. 13.

⁴ Plin. l. vi. c. 22.

⁵ Arriani et Marciani Herac. Paripol.

⁶ Inter. Vet. Pangyr.

be sought in the heavens and that geography depends upon astronomical observations. Now who can doubt, that astronomy has not made an extraordinary progress in later times? The invention of telescopes only, which is of sufficiently recent date, has infinitely contributed to it; and that invention itself has been highly improved in no great number of years. It is therefore no wonder that the ancients, with all the genius and penetration we are willing to allow them, were not able to attain to the same degree of knowledge, as they were not assisted in their inquiries by the same aids.

Geography is still far from having received its final perfection. Practical sciences make the least progress. Two or three great geniuses suffice for carrying theories a great way in a short time; but practice goes on with a slower pace, because it depends upon a greater number of hands, of which even far the greater part are but meanly skilful. Geography, which would require an infinite number of exact operations, is imperfect in proportion both to that number and the accuracy they would require; and we may justly suppose that the description of the terrestrial globe, though it begins to be rectified a little, is still very confused, and far from a true likeness.

It would be of small consequence to mention the faults of the ancient and Ptolemaic maps, in which the Mediterranean is made to extend a good fourth more in longitude than it really does. The question here is the modern maps, which, though generally the better the more modern they are, have still occasion for abundance of corrections.

Monsieur Sanson has always been considered as a very good geographer, and his maps have always been highly esteemed. Monsieur Delisle has however differed from them very often in his. And this is not to be imagined, as it is usually called, jealousy of profession. Since Monsieur Sanson's time, the map of the earth is exceedingly changed; that is to say, more accurate, and a great number of astronomical observations have greatly reformed geography. The same, no doubt, will happen to the maps of Monsieur Delisle: and we ought to wish so for the good of the public.

The only method for making good geographical maps would be to have the position of every place from astronomical observations. But we are exceedingly far from having all these positions in this manner, and can hardly ever hope to have them. To supply this want, the itinerary distances of one place from another are used, as found set down in authors: and it is a great happiness to find them there with any exactness, and without manifest contradiction, or considerable difficulties. Hence, when our most skilful geographers were to make a map of the Roman countries, and particularly of Italy, as they had very few astronomical observations, they made the itinerary distances of places, as they found them in the books of the ancients, their rule for their position. The positions of many places have been since taken by astronomical observations. Monsieur Delisle made use

of them for correcting the maps of Italy and the neighbouring countries; and he found that they not only became very different from what they were before, but that the places agreed exactly enough in respect to the distances given them by the ancients: so that it is to be presumed, that in following them literally, good geographical maps might be made of the countries well known to them.

There is reason to be surprised at this great conformity of positions found by astronomical observations with those taken from the itinerary distances as set down by the ancients. For it is certain, that the situation of places taken from our itinerary distances are often false, and much so too. But Monsieur Delisle observes, that the Romans had advantages in this respect which we have not. Their taste for the public utility, and even magnificence (for they embellished all they conquered,) had occasioned their making great roads throughout all Italy, of which Rome was the centre, and which went to all the principal cities as far as the two seas. They made the like ways in many provinces of the empire, of which remains, admirable for their construction and solidity, exist to this day. These ways ran in a right line, without quitting it either on account of mountains or marshes. The marshes were drained, and the mountains cut through. Stones were placed from mile to mile with their *numero* upon them. This rectilinear extent, and these divisions into parts sufficiently small in respect to the whole length, rendered the itinerary measures very exact. This exactness of the measures of the ancients was well proved by an experiment made by Monsieur Cassini. The measure of the distance from Narbonne to Nismes had been included in the work of the meridian. That distance was sixty-seven thousand five hundred *toises* or fathoms of Paris. Strabo had also given the distance of these two cities, which he makes eighty-eight miles. Whence it is easy to conclude, that an ancient mile was seven hundred sixty-seven *toises* of Paris. Besides, as the mile is known to have been five thousand feet, we also find that the ancient foot was eleven inches and 1-25th of the Paris foot. The measure, in consequence, must be equal to the ancient distance, and have preserved itself without change during so long a space of time.

Monsieur Delisle has given us a map, wherein Italy and Greece are represented in two different manners: the one according to the best modern geographers, the other according to astronomical observations for the places where they were to be had, and for the rest according to the measures of ancient authors. The difference between these two representations would perhaps seem incredible. In the latter, Lombardy is very much shortened from south to north, Great Greece lengthened, the sea that divides Greece and Italy made narrower, as well as that between Italy and Africa, and Greece much lessened.

These last remarks, which are all taken from the Memoirs of the Academy of Sciences, lengthen this brief head a little, but I conceived them worthy of the reader's curiosity.

OF NAVIGATION.

I SHALL examine only one point in this place, which is the wonderful change that an experiment, which might appear of small importance, has occasioned in navigation, and the superiority we have acquired in this respect over the ancients, by a means that seemed trivial in itself. I allude to the invention of the compass. This instrument is a box that has a needle in it touched with a loadstone, that turns always towards the pole, except in some places where it has a declination.

The ancients, we know, who steered their ships by the sun in the day, and the stars during the night, in misty weather could not discern what course to hold; and for that reason, not daring to put out to sea, were obliged to keep close to the shore, and could not undertake voyages of any considerable length. They knew one of the virtues of the loadstone, which is to attract iron. One would think that the slightest attention might have occasioned their discovering its other property, of directing itself towards the pole of the world, and in consequence have led them on to the compass. But he who disposes all things, kept their eyes shut to an effect, which seemed of itself obvious to them.

Neither the author of this invention, nor the time when the use of it was first thought of, is precisely known.¹ It is, however, certain, that the French used the loadstone in navigation long before any other nation of Europe, as may be easily proved from the works of some of our ancient French authors,² who spoke of it first above four hundred years ago. It is true, the invention was then very imperfect. For they say, that the needle was only put into a bowl or vessel full of water, where it could turn itself towards the north supported upon a pin. The Chinese, if we may believe certain modern relations, make use to this day of the same kind of compass.

The navigators perceiving the importance of this invention, made many astronomical observations towards the beginning of the fourteenth century to assure themselves of it, and found, that a needle touched with a loadstone, and set in *equilibrium* upon a pivot, did actually turn of itself towards the pole, and that the direction of such a needle might be employed for knowing the regions of the world, and the points of the wind in which it is proper to sail. By other observations it has been since discovered, that the needle does not always point to the true north, but that it has a small declination sometimes towards the east, and sometimes towards the west; and even that this declination changes at different times and places. But they found also the means of knowing this variation so exactly by the sun and stars, that the compass may be used with certainty for finding the regions of the heavens, even when clouded, provided that it has been rectified a little before by the observation of the stars.

The curiosity of the learned of Europe began at that time to awake. They soon invented various instruments, and made tables and calculations for facilitating the observation of the stars. Never had navigation so many advantages for succeeding. The pilots did not fail to make the most of them. With these helps they crossed unknown seas; and the success of their first voyages encouraged them to attempt new discoveries. All the nations of Europe applied themselves to them in emulation of each other. The French were the first in signaling their courage and address; they seized the Canaries, and discovered

great part of Guinea.⁴ The Portuguese took the island of Madeira and that of Cape Verd; and the Flemings discovered the islands of the Azores.

These discoveries were only preludes to that of the New World. Christopher Columbus, founding his design upon his knowledge of astronomy, and, as it is said, upon the memoirs of a Biscayan pilot, whom a storm had thrown upon an island of the Atlantic ocean, undertook to cross that sea. He proposed it to several of the princes of Europe, of whom some neglected it because engaged in affairs of a more urgent nature, and others rejected it because they neither comprehended the importance of that expedition, nor the reasons that Columbus gave to explain the possibility of it. Thus the glory of the discovery of the New World was left to the kings of Castile, who afterwards acquired immense riches by it. Columbus well knew, from his knowledge of the sphere and geography, that sailing continually toward the west under the same parallel or very near it, he could not fail of finding lands at length, because if he found no new ones, the earth being round, he must necessarily arrive by the shortest course at the extremity of the East Indies. In his voyages from Lisbon to Guinea, sailing from north to south, he had been confirmed by experience that a degree of the earth's circumference contains fifty-six miles and two-thirds, according to the measure established by the astronomers of Almagest; and he had learned in the books of Ptolemy, that, keeping always to the west, from the Canaries to the first lands of Asia, there are only an hundred and eighty degrees.⁵ Accordingly, he set out from the Canaries, steering always to the west under the same parallel.⁶ As he did not entirely rely upon the compass, he always took care to observe the sun by day, and the fixed stars by night. This precaution prevented him from mistaking his course. For those who have written his life say, that his observations of the heavens made him perceive a variation in his compass, which he did not know before, and that he rectified his way by them. After sailing two months, he arrived at the Lucay islands, and thence went on to Hispaniola, Cuba, and St. Domingo, whence he brought back great riches into Spain.⁷ Astronomy, by which he had discovered these rich countries, assisted him also in establishing himself there. For, in his second voyage, his fleet being reduced to extremities by the want of provisions, and the inhabitants of Jamaica refusing to supply him with them, he had the address to threaten them with darkening the moon at a time when he knew there would be an eclipse; and as that eclipse really happened the day he had foretold, the terrified barbarians granted him whatever he pleased.

Whilst Columbus was discovering the southern part of the New World, the French discovered the northern part of it, and gave it the name of New France.

Americus Vesputius⁸ continued the discoveries of Columbus, and had the advantage of giving his name to the whole New World, which has ever since been called America. Astronomy was of great use to him in his voyages.

On the other side, the pilots of the king of Portugal, who till then had only traversed the coasts of Africa, doubled at this time the Cape of Good Hope, and opened themselves a passage into the East Indies, where they made very great conquests.

Is there in all history an event comparable to that which I have now related, namely, the discovery of the New World? Upon what did it depend for so many ages? Upon the knowledge of a property of the loadstone, easily discoverable, which had however escaped the inquiries of an infinite number of the learned, whose sagacity had penetrated into the most obscure and most profound mysteries of nature. Is it possible not to discern here the finger of God? Columbus had never thought of forming his enterprise, and indeed could never have succeeded in it, without a great knowledge of Astronomy; for Providence delights in concealing its wonders under the veil of human operations. How important therefore is it in a well governed state, to place the superior sciences in honour and reputation, which are capable of rendering mankind such great services, and which have actually hitherto procured them, and still continues to procure them, such considerable advantages?

The reader will permit me to say a few words in this place upon two voyages of the learned, which do the king (Louis XV.) and literature in general great honour.

VOYAGES TO PERU AND INTO THE NORTH, UNDERTAKEN BY ORDER OF LOUIS XV.

In 1672, Mr. Richer observed, in the island of Cayenne, that the curvature of the superficies of the earth was greater there than in the temperate zone. Hence it was concluded that the figure of the earth must be that of a spheroid flat towards the poles, and not elliptical, or oblong, as it was and still is believed by very skilful astronomers; for the point is not yet determined. Newton and Huygens came afterwards by their theory to the same conclusion. It was to be assured of this truth, that in 1735, at a time when France had a war to support, which has since terminated so gloriously for her, the king, always intent upon making the sciences flourish in his dominions, sent astronomers to Peru and into the north, in order to determine with certainty by accurate observations, the figure of the terrestrial globe. Nothing was spared, either in respect to the expenses of the voyage, or to

procure them all the conveniences that might promote their success.

We saw them in consequence set out, part of them to expose themselves to the burning heats of the torrid zone, and the rest to fly with the same ardour to confront all the horrors of the frozen north. The first have not been heard of for a considerable time; but great discoveries are expected from their inquiries. The others returned from the north some months ago. The account of what they suffered in order to give their operations all the perfection of which they were capable, is scarce credible. They were obliged to traverse immense forests, in which they were the first that ever opened themselves way; to scale mountains of amazing height, and covered with wood, which it was necessary for them to cut down; to pass torrents of an impetuosity capable of astonishing such as only beheld them, and that too in wretched boats, that had no other pilot but a Laplander, nor mast nor sails but a tree with its branches. Add to this, the excessive cold of these regions remote from the sun, of which they experienced all the rigours; and the gross nourishment on which they were reduced to subsist during a very considerable length of time. It is easy to conceive the courage these indefatigable observers must have had to surmount so many difficulties, that seemed to render the execution of the project confided to them impossible. The late reading of the account of this voyage in the Academy of Sciences, since their return, has made the public very desirous to see it printed.

One is sometimes tempted to treat as useless such laborious and scrupulous observations, that have no end but to determine the figure of the earth; and there are many who will perhaps believe, that those who made them might have spared themselves the trouble, and made a better use of the money employed in them. But this proceeds from the ignorance of the relation of observations of this nature to navigation, and the advantages resulting from them to astronomy. This event will not a little conduce to exalt the glory of the reign of Louis XV.

CONCLUSION OF THE WHOLE WORK.

AFTER having made almost all the states and kingdoms of the universe in a manner pass in review before our eyes, and having considered circumstantially the most important events that occurred in them during the course of so many ages, it seems natural enough to go back a moment, before we quit this great scene, and to collect its principal parts into one point of view, in order to our being able to form the better judgment of it. On the one side we see princes, warriors, and conquerors; on the other magistrates, politicians, and legislators; and in the midst of both, the learned of all kinds, who by the utility, beauty, or sublimity of their knowledge, have acquired immortal reputation. These three classes include, in my opinion, all that is most shining, and most attractive of esteem and admiration in human greatness. I consider the universe here only in its fairest light, and for a moment take off my view from all the vices and disorders that disturb its beauty and economy.

Before me stand princes and kings, full of wisdom and prudence in their counsels, of equity and justice in the government of their people, of valour and intrepidity in battle, of moderation and clemency in victory, subjecting many kingdoms, founding vast empires and acquiring the love of the conquered nations no less than of their own subjects: such was Cyrus. At the same time I see a multitude of Greeks and Romans,

equally illustrious in war and peace; generals of the most exalted bravery and military knowledge; politicians of exceeding ability in the arts of government; famous legislators, whose laws and institutions still amaze us, while they seem almost incredible, so much they appear above humanity; magistrates venerable for their love of the public good; judges of great wisdom, incorruptible, and proof against all that can tempt avarice; and lastly, citizens entirely devoted to their country, whose generous and noble disinterestedness rises so high as the contempt of riches, and the esteem and love of poverty. If I turn my eyes towards the arts and sciences, what luster do not the multitude of admirable works come down to us display, in which shine forth, according to the difference of subjects, art and disposition, greatness of genius, riches of invention, beauty of style, solidity of judgment, and profound erudition.

This is the great, the splendid scene that history, the faithful register of past events, has hitherto presented to our view, and upon which it now remains for us to pass our judgment. Is it possible to refuse our esteem to such rare and excellent qualities, such shining actions, and noble sentiments? Let us call to mind the maxims of morality in the writings of the philosophers, so refined, so conformable to right reason, and even so sublime, as to be capable sometimes

of making Christians blush. Do not men of such profound knowledge and understanding deserve the name of sages?

The just Judge of all things, by whose judgment it is our duty to direct our own, absolutely denies it them, as Mr. du Guet observes so justly in several of his works, and as I have said elsewhere. "The Lord," says the royal prophet, "looked down from heaven upon the children of men, to see if there were any that did understand and seek God."¹ The earth is full of persons that excel in arts and sciences. There are many philosophers, orators, and politicians. There are even many legislators, interpreters of laws, and ministers of justice. Many are consulted as persons of extraordinary wisdom, and their answers are considered as decisions, from which it is not allowable to depart. However, among so many wise and intelligent persons in the sight of men, God discerns none that are not foolish and mad. "They are all gone aside, they are altogether filthy: there is none that doth good, no not one." The censure is general and without exception. What then is wanting in these pretended wise men? The fear of God, without which there is no true wisdom, "to see if there was any that did understand and seek God:" the knowledge of their own misery and corruption, and their want of a Mediator, and a Restorer or Redeemer. Every thing is in esteem among them except religion and piety. They know neither the use nor end of any thing. They go on without design, or knowing whither they should end. They are ignorant of what they are, and what shall become of them. Can folly be more clear and evident?

The thoughts of God are very different from those of men. The universe peopled with powerful kings, famous legislators, celebrated philosophers, and learned men of all kinds, is the object of our admiration and praise; and God sees nothing but disorder and corruption in it. "The earth was corrupt before God."² The qualities, knowledge, and maxims of which I speak, were, however, very estimable in themselves. They were the gifts of God, from whom alone comes all good, and all knowledge: but the Pagans perverted their nature by the unworthy use they made of them, in considering themselves as their principle and end. I speak here even of those among them who passed for the best and wisest, whose virtues were infected either with pride or ingratitude; or, to speak more properly, with both.

I have observed that certain ages, which abounded

with illustrious examples either at Athens or Rome exhibit a grand and noble scene in history: but there was at the same time a circumstance which highly disgraced the glory, and sullied the beauty of these ages; I mean the idolatry that generally prevailed throughout the universe. The whole earth was covered with thick darkness, and lay plunged in gross and stupid ignorance. Only one country, and that of very small extent, knew the true God: "In Judah is God known: his name is great in Israel."³ Elsewhere all mouths were mute in respect to him, and the hymns of idolatrous solemnities were only invitations to crimes, which the seducer of mankind had made their duty. "God suffered all nations to walk each after their own way,"⁴ to make themselves gods of all creatures, to adore all their own passions, to abandon themselves through despair to those which are most shameful, to be ignorant of their origin and end, to direct their lives by errors and fable, and believe every thing indiscriminately, or nothing at all.

One would imagine that man, situated in the midst of the wonders which fill all nature, and largely possessed of the good things of God, could not forget him, or remember him without adoration and fidelity. But in the midst of the greatest light he behaved like the blind. He became deaf to all the voices that proclaimed the majesty and holiness of the creator. He adored every thing, except God. The stars and sun that declared the divinity, he honoured in his stead. Wood and stone, under a thousand forms, which his wild imagination had invented, were become his gods. In a word, false religion had deluged the whole earth; and if some few were less stupid than the rest, they were equally impious and ungrateful. Did not the only one of these,⁵ who had explained himself too clearly, deny in public what he believed in private? Whence we may observe, of what avail the reason of all mankind was, when they had no other guide.

We see here the principle fruits to be derived from the study of profane history, of which every page declares what mankind were during so many ages, and what we ourselves should still have been, had not the peculiar mercy, which made known the Saviour of the world to us, drawn us out of the abyss, in which all our forefathers were swallowed up. "It is of the Lord's mercies we are not consumed." A mercy freely and entirely conferred, which we have no power to deserve in any manner of ourselves, and for which we ought to render eternal homage of gratitude and praise to the grace of Jesus Christ.

CHRONOLOGICAL TABLE

CHRONOLOGY is the knowledge of the just computation of time. It shows to what year the events related in history are to be referred. The years used for measuring the duration of time are either Solar or Lunar.

The Solar year is that space of time which elapses between one equinox and another of the same denomination the next year: for instance, from the vernal equinox to the vernal equinox following, which contains 365 days, five hours, and forty-nine minutes.

The Lunar year is composed of twelve Lunar months, each of which consists of twenty-nine days, twelve hours, and forty-four minutes, that make in all 354 days, eight hours, and forty-eight minutes.

Both of these years are called Astronomical, to distinguish them from that in common use, which is termed Civil or Political.

Though all nations may not agree with one another in the manner of determining their years, some regulating them by the motion of the sun, and others by that of the moon, they, however, generally use the solar year in *chronology*. It seems at first, that as the lunar years are shorter than the solar, that inequality should produce some error in chronological calculations. But it is to be observed, that the nations who used lunar years, added a certain number of intercalary days to make them agree with the solar: which makes them correspond with each other; or at least, if there be any difference, it may be neglected, when the question is only to determine the year in which a fact happened.

In *Chronology* there are certain times distinguished by some great event, to which all the rest are referred. These are called *Epochs*, from a Greek word, which signifies to stop, because we stop there to consider, as from a resting place, all that has happened before or after, and by that means to avoid anachronisms, that is to say, those errors which induce confusion of times.

The choice of the events which are to serve as epochs, is arbitrary; and a writer of history may take such as best suit his plan.

When we begin to compute years from one of these points distinguished by a considerable event, the enumeration and series of such years is called an *Era*. There are almost as many eras as there have been different nations. The principal, and those most in use, are that of the *Creation of the World*, of the *Birth of Jesus Christ*, of the *Olympiads*, and of the *Building of Rome*. I made use only of the two most famous, that is to say, that of the *World*, and that of *Jesus Christ*.

Every body knows, that the *Olympiads* derived their origin from the Olympic games, which were celebrated in Peloponnesus, near the city of Olympia. These games were so solemn, that Greece made them her epoch for computing her years. By an *Olympiad* is meant the space of four years complete, which is the time that elapsed between one celebration of the games and another. The first used by chronologists begins, according to Usher, in the summer of the year of the world 3228, before Christ 776. When the time in which an event happened is reckoned by *Olympiads*, authors say, the first, second, or third, &c. year of such an *Olympiad*: which being once known, it is easy to find the year of the world to

which the same fact is to be referred: and in like manner when the year of the world is known it is easy to find that of the Olympiad which agrees with it.

Rome was built, according to Varro's *Chronology* in the year of the world 3251, and the 753d before Jesus Christ. Cato dates the foundation of that city two years later, in the year of the world 3253, before Jesus Christ 751. I shall follow the opinion of the latter in my Roman history. The years reckoned from this *epoch* are called indifferently years of Rome, or years from the foundation of the city.

The *Julian period* is also a famous era in *chronology*, used principally for reckoning the years before Christ. I am going to explain in a few words, wherein this period consists, and its use: but first I must give the reader an idea of the three *cycles* of which it is composed.

By the word *cycle*, is understood the revolution of a certain number of years.

The *Solar cycle* is a term of twenty-eight years, which includes all the variations that the Sundays and days of the week admit: that is to say, at the end of twenty-eight years the first seven letters of the alphabet, which are used in the calendar for noting the day of the week, and which are called Dominical letters, return in the same order in which they were at first. To understand what I have now said, it must be observed, that if the year had only fifty-two weeks, there would be no change in the order of the Dominical letters. But as it has a day more, and two in leap-year, that produces some variations, which are all included in the space of twenty-eight years, of which the solar *cycle* consists.

The Lunar *Cycle*, called also the Golden Number, is the revolution of nineteen years, at the end of which the moon returns, within an hour and a half, to the same point with the sun, and begins its lunations again in the same order as at first. We are indebted for the invention of this *cycle* to Meto, a famous Athenian astronomer. Before the invention of the *epochs*, it was used for marking the days of the new moon in the calendar.

Besides these two *cycles*, chronologists admit a third also, called *Indiction*. This is a revolution of fifteen years, of which the first is called the *first indiction*, the second the *second indiction*, and so on to the fifteenth, after which they begin again to count the *first indiction*, &c.

The first indiction is generally supposed to have begun three years before the birth of Christ.

If these three cycles, that is to say, 28, 19, and 15, are multiplied by each other, the product will be 7980, which is what is called the *Julian period*.

One of the properties of this period, is to give the three characteristic cycles of each year, that is to say, the current year of each of the three cycles; for example, every body knows that the vulgar era commences at the year 4714 of the *Julian period*. If that number be divided by 28, what remains^a after the division shows the solar cycle of that year. In the same manner the lunar cycle and the indiction may be found.

^a I say, what remains, and not the quotient, as some authors do; for the quotient expresses the number of *cycles* elapsed since the beginning of the period, and what remains after the division shows the year of the current cycle.

It is demonstrated, that the three numbers which express these three *cycles* cannot be found again in the same order in any other year of the *Julian period*. It is the same in respect to the cycles of other years.

If we trace this period back to its first year, that is to say, to the year when the three cycles, of which it is composed, began, we shall find it precede the creation of the world 710 years: supposing the creation to precede the vulgar era only 4004 years.

This period is called *Julian*, because it is made to agree with the years of Julius Cæsar. Scaliger invented it to reconcile the systems that divided chronologers concerning the length of time elapsed since the beginning of the world. There are some who believe that only 4004 years of the world are to be reckoned before *Jesus Christ*. Others give more extent to that space, and augment the number of years of which it consists. These variations disappear when the *Julian period* is used, for every body agrees in respect to the year in which that began, and there is nobody who

does not allow, that the first year of the vulgar era falls in with the 4714th of that period. Thus in the *Julian period* there are two fixed points, which unite all systems, and reconcile all chronologers.

It is easy to find the year of the *Julian period*, that answers to any year whatsoever of the vulgar era of the world. For as the beginning of the *Julian period* precedes that era 710 years, by adding that number to the year proposed of the era of the world, we have the year of the *Julian period* that answers to it. For instance, we know that the battle of Arbela was fought in the year of the world 3673. If to that number we add 710, it will be 4383, which number expresses the year of the *Julian period* to which the battle of Arbela is to be referred.

The reader knows that hitherto I have not entered into chronological discussions, and undoubtedly does not expect that I should do so now. I shall generally follow Usher, whom I have chosen for my guide in this subject.

THE TABLE.

A. M. J. C.		Assyrians.	
1800	2304	Nimrod, founder of the first empire of the Assyrians. Ninus, the son of Nimrod. Semiramis. She reigned forty-two years. Ninyas.	
<i>The history of the successors of Ninyas for thirty generations, except of Phul and Sardanapalus, is unknown.</i>			
		Egypt.	Græce.
1816	2188	Menes or Mesram, first king of Egypt. Busiris. Osymandias. Uchoreus. Moeris.	
1915	2066		Foundation of the kingdom of Sicyon.
1920	2064	The Shepherd-kings seize Lower Egypt. They reign 260 years.	
2064	1920	Abraham enters Egypt, where Sarah is in great danger from one of the Shepherd-kings.	
2148	1856		Foundation of the kingdom of Argos. Deluge of Ogyges in Attica.
2179	1825	Thethmosis expels the Shepherd-kings, and reigns in Lower Egypt.	
2276	1728	Joseph is carried into Egypt, and sold to Potiphar.	
2298	1706	Jacob goes into Egypt with his family.	
2427	1577	Rameses-Miamum begins to reign in Egypt. He persecutes the Israelites.	
2443	1561	Cecrops conducts a colony from Egypt, and founds the kingdom of Athens.	Foundation of the kingdom of Athens by Cecrops. He institutes the Areopagus.
2458	1546		Under Cranaus, successor of Cecrops, happens Deucalion's flood.
			Foundation of the kingdom of Lacedæmonia, of which Lelex is the first king.
2494	1510	Amenophis, the eldest son of Rameses, succeeds him.	
2513	1491	The Israelites quit Egypt. Amenophis is swallowed up in the Red Sea. Sesostris his son succeeds him. He divides Egypt into thirty nomes, or districts, renders Ethiopia tributary, conquers Asia, and subjects the Scythians as far as the Tanais. On his return into Egypt he kills himself, after a reign of 33 years.	
2630	1474		Danaus, brother of Sesostris, leaves Egypt, and retires into the Peloponnesus, where he makes himself master of Argos.
2647	1457	Pheron succeeds Sesostris.	Perseus, the fifth of Danaus's successors, having unfortunately killed his grandfather, abandons Argos, and founds the city of Mycenæ.
2698	1376		Sisyphus, the son of Æolus, makes himself master of Corinth.
4710	1294		The descendants of Sisyphus are driven out of Corinth by the Heraclids.
4730	1284		Ægeus, the son of Pandion, king of Attica. The expedition of the Argonauts is dated in the reign of this prince.
2800	1204	Proteus. In his reign Paris is driven into Egypt on his return to Troy with Helen. Rhampsinit.—Cheops.—Chephrem.—Mycerinus.—Asychia. The six preceding reigns were 170 years in duration; but it is hard to assign the length of each of them in particular.	The Heraclids make themselves masters of Peloponnesus; from whence they are obliged to retire soon after.
2820	1184		Troy taken by the Greeks.
2900	1104		The Heraclids re-enter Peloponnesus, and seize Sparta, where the two brothers Euryathenes and Procles reign together.

A. M.	A. C.	Egypt.	Greece.	Babylon and Nineveh.	Media.	Lydia.
3355	548			Death of Nabuchodonosor. Saracus, called also Chynaladanus, succeeded him.		
3364	540		Tyræus, a poet who excelled in celebrating military virtue.			
3369	635		Thales of Miletus, founder of the Ionic sect.	Nabopolassar's revolt against Saracus. He makes himself master of Babylon.	Phraortes perishes at the siege of Nineveh, with part of his army. Cyaxares his son succeeds him.—The second year of his reign he beats the Assyrians, and attacks Nineveh, the siege of which he is obliged to abandon by a sudden irruption of the Scythians into his dominions.	Sadyattes. He forms the siege of Miletus in the 16th year of his reign.
3373	631					
3378	626					
3380	634		Draco, legislator of Athens.	Destruction of Nineveh. From thenceforth Babylon was the capital of the Assyrian empire.		
3385	619					
3388	616	Nechao. In the 7th year of his reign he defeats the king of Assyria, and seizes part of his dominions. He reigned 16 years.		Babylon. Nabopolassar associates his son Nabuchodonosor in the empire, and sends him at the head of an army to re-conquer the countries taken from him by Nechao. Jerusalem taken by Nabuchodonosor. He transports a great number of Jews to Babylon, and amongst them the prophet Daniel. The Captivity begins from his carrying away the Jews to Babylon. Death of Nabopolassar. His son Nabuchodonosor II. succeeds him in all his dominions. Nabuchodonosor's first dream interpreted by Daniel.		Alyattes. He continues the siege of Miletus, which had been carried on 6 years by his father, and puts an end to it six years after, by concluding a peace with the besieged. In the same prince's reign there was a war between the Medes and Lydians, which was terminated by the marriage of Cyaxares with Aryenis, the daughter of Alyattes.
3397	607				Cyaxares joins his forces with those of Nabopolassar, takes Nineveh, and puts Syracus the king to death.	
3398	606					
3399	605					
3400	604		Solon.			
3403	601		The seven sages of Greece lived about this time.			
3404	600	Psammis 6 years.	Alcæus, from whom the Alcaic verses take their name. Sappho, at the same time.		Astyages, the son of Cyaxares, gives his daughter in marriage to Cambyses, king of Persia.	
3405	599			Nabuchodonosor's lieutenants, after having ravaged Judea, blockade Jerusalem, and put king Jehoiakim to death. About the end of the same year, Nabuchodonosor repairs in person to Jerusalem, makes himself master of it, and appoints Zedekiah king instead of Jehoiachin, whom he carries into captivity.	Birth of Cyrus.	
3409	595				Death of Cyaxares.	
3410	594	Apries. He makes himself master of Sidon, in the first year of his reign.		Nabuchodonosor destroys Jerusalem, and carries away Zedekiah captive to Babylon. At his return into his dominions, he causes the three young Hebrews to be thrown into the furnace.	Astyages his son succeeds him. He reigns 35 years.	
3411	593	Zedekiah, king of Judah, makes an alliance with the king of Egypt, contrary to the advice of the prophet Jeremiah.			Cyrus goes for the first time into Media, to see his grandfather Astyages. He remains 3 years with him.	
3416	588	Unfortunate expedition of Apries into Lybia. Amasis revolts against Apries.				
3430	574					
3432	572	Nabuchodonosor subjects Egypt, and confirms Amasis in the throne.		Nabuchodonosor makes himself master of Tyre, after a siege of 13 years. He did not march against Egypt till after this expedition.		
3434	570			Nabuchodonosor's second dream interpreted by Daniel.		
3435	569	Apries dies in the 25th year of his reign.		Nabuchodonosor reduced to the condition of beasts during 7 years; after which he reigns again one year.		
3440	564	Amasis reigns after him in Egypt.	Thespis reforms tragedy. Pythagoras lived about this time.	Evil-Merodach his son succeeds him. He reigns only two years.	Death of Astyages.	
3442	562			Neriglissor. He makes great preparations for war against the Medes, and calls in Croesus to his aid.	Cyaxares succeeds him, known in Scripture under the name of Darius the Medo.	
3444	560		Simonides, the celebrated poet.		Cyrus returns into Media for the second time, in order to assist his uncle in the war with the Babylonians.	
3445	559		Pisistratus makes himself master of Athens.		Expedition of Cyrus against the king of Armenia. Cyaxares and Cyrus defeat the Babylonians in a great battle, in which Neriglissor is slain.	
3447	557					
3448	556			Laborosoarched. He reigns only nine months.		Croesus dies before Cyrus.

A.M.	A.C.	Egypt.	Greece.	Babylon.	Media.	Lydia.
3443	555			Labyrit, called in Scripture, Belshazzar.	About this time the marriage of Cyrus with the daughter of his uncle Cyaxares may be dated.	Battle of Thymbra between Croesus and Cyrus, followed by the taking of Sardis by the latter. End of the kingdom of Lydia.
3456	548		Hipponax, author of the verse Scaxon. Heraclitus, chief of the sect which bears his name.			
3460	544		Birth of Eschylus. Ctesiphon, or Chersiphron, a celebrated architect, famous especially for building the temple of Diana of Ephesus.	Labyrit is killed at the taking of Babylon. The death of that prince puts an end to the Babylonian empire, which is united with that of the Medes.	Cyrus makes himself master of Babylon.	
3468	536				Death of Cyaxares.	
<i>After the death of Cyaxares and Cambyses, Cyrus, who succeeded both in their dominions, united the empire of the Medes with those of the Babylonians and Persians; and of the three formed a fourth, under the name of the Empire of the Persians, which subsisted 206 years.</i>						
<i>Empire of the Persians.</i>						
3468	536			Cyrus. The first year of his reign he permits the Jews to return into Judea.		
3470	534			Daniel's vision concerning the succession of the kings of Persia.		
3475	529			Cyrus dies on a journey which he makes into Persia, after having reigned seven years alone, and thirty from his setting out from Persia at the head of an army to aid Cyaxares.		
3478	526			Cambyses his son succeeds him. The fourth year of his reign he attacks Egypt, and re-unites it to the empire of the Persians.		
3479	525	Psammenitus. He reigns only six months.	Death of Pisistratus, Hipparchus his son succeeds him.	Unsuccessful expedition of Cambyses against the Ethiopians.		
3480	524			Cambyses puts Merne, who was both his sister and wife, to death.		
3481	523	After the death of that prince, Egypt is annexed to the Persian dominions, and continues so till the reign of Alexander the Great, which includes the space of 206 years.		It was about this time that Oretas, one of the Satraps of Cambyses, made himself master of the island of Samos, and caused Polycrates, the tyrant of it, to be put to death.		
3482	522			Death of Cambyses. Smerdis the Magian, who had mounted the throne before the death of Cambyses, succeeds him. He reigns only seven months.		
3483	521			Darius, son of Hystaspes.		
3485	519			Edict of Darius in favour of the Jews, wherein that of Cyrus is confirmed. It is believed, that what is related in the history of Esther happened some time after the publication of this edict.		
3488	516		Miltiades goes to settle in the Chersonesus.	Babylon revolts against Darius, and is taken after a siege of twenty months.		
3490	514			Expedition of Darius against the Scythians.		
3496	508		The Pisistratids are obliged to abandon Attica.	Darius penetrates into India, and reduces all that great country into subjection.		
<i>The History of the Greeks from henceforth will be intermixed and almost confounded with that of the Persians; for which reason I shall separate their chronology no farther.</i>						
<i>Persians and Grecians.</i>						
3501	503			The Persians form the siege of the capital of the island of Naxos, and are obliged to raise it in six months.		
3502	502			Aristagoras, governor of Miletus, revolts from Darius, and brings the Ionians and Athenians into his measures.		
3504	500			The Ionians take Sardis, and burn it.		
3507	497			The Persians defeat the Ionians in a sea-fight before the island of Lados, and make themselves masters of Miletus.		
3510	494			Darius sends Gobrias his son-in-law at the head of an army to attack Greece.		
3513	491			Darius takes the command of his armies from Gobrias, and gives it to Datis and Artaphernes.		
3514	490			Battle of Marathon.		
3515	489			Unfortunate end of Miltiades.		
3519	485			Death of Darius Hystaspes. Xerxes his son succeeds him.		
4820	484			Birth of the historian Herodotus.		
3524	480			Xerxes sets out to make war against the Greeks.		
				Battle of Thermopylæ. Leonidas, king of the Lacedæmonians, is killed in it. Sea-fight near Artemisium, fought at the same time with the battle of Thermopylæ.		
				Birth of Euripides.		
				Battle of Salamis, followed by the precipitate return of Xerxes into Persia.		
3525	479			Battle of Plataea. Sea-fight the same day near Mycale, in which the Persians are defeated.		
3526	478			The Athenians rebuild the walls of their city, which had been demolished by Xerxes, notwithstanding the opposition of the Lacedæmonians.		
3528	476			The command of the armies of Greece, of which the Lacedæmonians had been in possession from the battle of Thermopylæ, is transferred to the Athenians.		
				Pindar flourished about this time.		
3530	474			Pausanias, general of the Lacedæmonians, accused of holding secret intelligence with Xerxes, is put to death.		
3531	473			Themistocles, the Athenian general, is accused of having had a share in Pausanias's plot, and takes refuge with Admetus, king of the Alceians.		
				Sophocles and Euripides appear in Greece about this time.		
3532	472			Xerxes is killed by Artabanus, the captain of his guards.		
				Artaxerxes, surnamed Longimanus, succeeds him. Themistocles takes refuge in his court the first year of his reign.		
3533	471			Cimon receives the command of the armies at Athens. The year following he defeats the Persians, and takes their fleet near the mouth of the river Eurymedon.		
				Birth of the historian Thucydides.		
3534	470			Great earthquake at Sparta, in the reign of Archidamus, which gives rise to a sedition of the Helots.		
				Birth of Socrates.		
3535	469			Beginning of Pelicles.		
				Phidias, famous for his skill in architecture and sculpture.		
				Difference and misunderstanding between the Athenians and Lacedæmonians, occasioned by the affront offered to the Athenians by the Lacedæmonians, in sending back their troops, after having called them in to their aid against the Messenians and Helots. Some time after, and in consequence of this quarrel, Cimon is banished by the Ostracism.		

<i>A. M. A. C.</i>		<i>Persians and Grecians.</i>
3637	467	Ezra obtains a commission from Artaxerxes to return to Jerusalem, with all who are willing to follow him.
3638	466	Themistocles puts an end to his life at Magnesia.
3640	464	Herdacus of Sicily, chief of the sect of Physicians called ΔΙΟΤΡΙΧΕΙΣ. Hippocrates was his disciple.
3644	460	The Egyptians, supported by the Athenians, revolt against Artaxerxes.
3645	459	Defeat of the Persian army in Egypt.
3648	456	The Egyptians and Athenians are defeated in their turn; in consequence of which all Egypt returns to its obedience to Artaxerxes, and the Athenians retire to Biblos, under the command of Inarus, where they sustain a siege of a year.
3550	454	Battle of Tanagra in Boeotia, where the Athenians beat the Spartans, who were come to the aid of the Thebans.
3554	450	Nehemiah obtains Artaxerxes's permission to return to Jerusalem.
		Birth of Xenophon.
		Cimon, recalled from banishment after five years' absence; reconciles the Athenians and Spartans, and makes them conclude a truce of five years.
3555	449	End of the war between the Greeks and Persians, which had continued from the burning of Sardis by the Athenians, fifty-one years.
		Death of Cimon.
3558	446	The Lacedæmonians conclude a truce for thirty years with the Athenians. The latter soon break it by new enterprises.
		Empedocles, the Pythagorean philosopher, flourished about this time.
		Myron, the famous sculptor of Athens.
3564	440	Pericles makes war with the Samians, and takes the capital of their island, after a siege of nine months.
		Zeuxis, the famous painter, disciple of Apollodorus. Parrhasius his rival lived at the same time.
		Aristophanes the comic poet.
3568	436	Birth of Isocrates.
		War between the Corinthians and the people of Corcyra. The Athenians engage in it in favour of the Corcyrians. The inhabitants of Potidea declare on the side of Corinth against Athens. Alcibiades begins to appear in this war, which occasions that of Peloponnesus.
		Scopas, architect and sculptor.
3573	431	Beginning of the Peloponnesian war. It continues twenty-seven years.
3574	430	A terrible plague rages in Attica. The physician Hippocrates distinguishes himself by his extraordinary care of the sick.
3575	429	Death of Pericles.
3576	428	The Lacedæmonians besiege Platæa.
		Plato, founder of the ancient academy.
3579	425	Death of Artaxerxes. Xerxes his son succeeds him. He reigns only forty-five days.
		Sogdianus puts Xerxes to death, and causes himself to be acknowledged king in his stead. His reign continues only six months.
3580	424	Ochus, known under the name of Darius Nothus, rids himself of Sogdianus, and succeeds him.
		The Athenians, under Nicias, make themselves masters of Cythera.
		Thucydides is banished by the Athenians, whose army he commanded, for having suffered Amphipolis to be taken.
		Polygnotus, famed particularly for his painting in the portico called Ποικίλῃ at Athens, in which he represented the principal events of the Trojan war.
3583	421	Treaty of peace concluded, by the application of Nicias, between the Lacedæmonians and Athenians, in the tenth year from the beginning of the Peloponnesian war. Alcibiades, by an imposture, occasions its being broken the following year.
3584	420	The banishment of Hyperbolus puts an end to the Ostracism.
3588	416	Alcibiades engages the Athenians to assist the people of Egæta against the Syracusans.
3589	415	Alcibiades, one of the generals sent to Sicily by the Athenians, is recalled to Athens to answer accusations against him. He flies to Sparta, and is condemned for contumacy.
3590	414	Pisuthnes, governor of Syria, revolts against Darius. The Egyptians do the same, and choose Amyrtæus for their king, who reigns six years.
3593	411	Alcibiades, to avoid the envy his great actions had drawn upon him at Sparta, throws himself into the arms of Tissaphernes, one of the king of Persia's satraps. The Lacedæmonians, by the help of Tissaphernes, conclude a treaty of alliance with the king of Persia.
3595	409	Alcibiades is recalled to Athens. His return occasions the abolition of the Four Hundred, who had been invested with supreme authority.
		Darius gives Cyrus, his youngest son, the government in chief of all the provinces of Asia Minor.
3598	406	Lysander is placed at the head of the Lacedæmonians. He defeats the Athenians near Ephesus. In consequence of that defeat, Alcibiades is deposed, and ten generals are nominated to succeed him.
3599	406	Callicratidas gets the command of the army in the room of Lysander, from whom the Lacedæmonians had taken it. He is killed in a sea-fight near the Arginæssæ.
3599	406	Lysander is restored to the command of the Lacedæmonian army. He gains a famous victory over the Athenians at Egæspotamus.
		Conon, who commanded the Athenian forces, retires after his defeat to Evagoras, king of Cyprus.
3600	404	Lysander makes himself master of Athens, changes the form of the government, and establishes thirty Archons, commonly called the thirty tyrants.
		End of the Peloponnesian war.
		Death of Darius Nothus. Araces his son succeeds him, and takes the name of Artaxerxes Mnemon.
		Cyrus the younger intends to assassinate his brother Artaxerxes. His design being discovered, he is sent back to the maritime provinces, of which he was governor.
3601	403	Interview of Cyrus the younger and Lysander at Sardis.
		ThraSybulus expels the tyrants of Athens, and re-establishes its liberty.
3602	402	Cyrus the younger prepares for a war with his brother Artaxerxes.
3603	401	Defeat and death of Cyrus the younger at Cunaxa, followed by the retreat of the Ten Thousand.
		Death of Socrates.
3604	400	Lacedæmon declares war against Tissaphernes and Pharnabazus.
3606	398	Beginning of Amyntas, king of Macedonia, father of Philip.
3607	397	Agésilæus is elected king of Sparta. The year following he goes to Africa, to the aid of the Greeks settled there.
3609	395	Lysander quarrels with Agésilæus, and undertakes to change the order of the succession to the throne.
		The army of Tissaphernes is defeated near Sardis by Agésilæus.
3610	394	Thebes, Argos, and Corinth, enter into a league against Lacedæmon, at the solicitation of the Persians. Athens enters into the same league soon after. Agésilæus is recalled by the Ephori to the assistance of his country.
		The fleet of the Lacedæmonians is defeated near Cnidus by Pharnabazus, and Conon the Athenian, who commanded that of the Persians and Greeks. Agésilæus defeats the Thebans almost at the same time, in the plains of Coronea.
		Conon rebuilds the walls of Athens.
3617	387	Peace, shameful to the Greeks, concluded with the Persians by Antalcidas the Lacedæmonian.
3618	386	Artaxerxes attacks Evagoras, king of Cyprus, with all his forces, and gains a signal victory over him.
		It is followed by the siege of Salamis, which is terminated by a treaty of peace.
3620	384	Expedition of Artaxerxes against the Cadusians.
		Birth of Aristotle, founder of the Peripatetics.
3621	383	The Lacedæmonians declare war against the city of Olynthus.
		Birth of Philip, king of Macedon.

Persians and Grecians.

3622	382	Phœbidas, on his way to the siege of Olynthus, at the head of part of the army of the Lacedæmonians, makes himself master of the citadel of Thebes.
		Birth of Demosthenes.
3626	378	Pelopidas, at the head of the rest of the exiles, kills the tyrant of Thebes, and retakes the citadel.
3627	377	Artaxerxes Mnemon undertakes to reduce Egypt, which had thrown off his yoke for some years. He employs about two years in making preparations for that war.
3629	375	Death of Amyntas, king of Macedonia. Alexander his eldest son succeeds him. He reigns only two years. Perdicas ascends the throne next, and reigns 14 years.
3630	374	Death of Evagoras, king of Cyprus. Nicocles his son succeeds him.
3634	370	Battle of Leuctra, in which the Thebans, under Epaminondas and Pelopidas, defeat the Lacedæmonians.
3635	369	Expedition of Pelopidas against Alexander, tyrant of Phœræ. He goes to Macedonia, to terminate the differences between Perdicas and Ptolemy, son of Amyntas, concerning the crown. He carries Philip with him to Thebes as a hostage. He is killed in a battle which he fights with the tyrant of Phœræ.
3641	363	Battle of Mantinea. Epaminondas is killed in it, after having secured the victory to the Thebans.
3642	362	The Lacedæmonians send Agesilaus to aid Tachos, king of Egypt, against Artaxerxes. He dethrones Tachos, and gives the crown to Nectanebus. He dies on his return from that expedition.
		Death of Artaxerxes Mnemon. Ochus his son succeeds him.
3644	360	Philip ascends the throne of Macedonia. He makes a capitious peace with the Athenians.
<i>The history of the Cappadocians begins at this time, the chronology of whose kings I shall give after that of Alexander's Successors. I shall annex it to that of the Parthians, and of the kings of Pontus.</i>		
3646	358	War of the allies with the Athenians. It continued three years.
		Philip besieges and takes Amphipolis.
3648	356	Revolt of Ariabassus against Ochus king of Persia.
		Birth of Alexander the Great.
3649	355	Demosthenes appears in public for the first time, and encourages the Athenians, who were alarmed by the preparations for war making by the king of Persia.
		Beginning of the sacred war.
3650	354	Death of Mausolus, king of Caria.
3651	353	Philip makes himself master of the city of Methon.
3652	352	Artemisia, widow of Mausolus, whom she had succeeded, takes Rhodes.
		Philip attempts to seize Thermopylæ in vain.
3653	351	Successful expedition of Ochus against Phœnicia, Cyprus, and afterwards Egypt.
3654	350	Nectanebus, the last king of Egypt of the Egyptian race, is obliged to fly into Ethiopia, from whence he never returns.
3656	348	Death of Plato.
3658	346	Philip makes himself master of Olynthus.
		Philip seizes Thermopylæ, and part of Phocis. He causes himself to be admitted into the number of the Amphictyons.
3662	343	Oration of Demosthenes concerning the Chersonesus, in favour of Diophties.
3665	339	The Athenians send aid under Phocion to the cities of Perinthus and Byzantium, besieged by Philip. That prince is obliged to raise the siege.
3666	338	Philip is declared generalissimo of the Greeks in the council of the Amphictyons. He makes himself master of Elateæ.
		Battle of Chæroneæ, wherein Philip defeats the Athenians and the Thebans, who had entered into a league against him.
		Ochus, king of Persia, is poisoned by Bagoas his favourite. Arses his son succeeds him, and reigns only three years.
3667	337	Philip causes himself to be declared general of the Greeks against the Persians. The same year he repudiates his wife Olympias. His son Alexander attends her into Epirus, from whence he goes to Illyria.
3668	336	Philip's death. Alexander his son, then twenty years of age, succeeds him.
3669	335	Arses, king of Persia, is assassinated by Bagoas. Darius Codomanus succeeds him.
3669	333	Thebes taken and destroyed by Alexander. He causes himself to be declared generalissimo of the Greeks against the Persians in a diet assembled at Corinth.
3670	334	Alexander sets out for Persia.
		Battle of the Granicus, followed with the conquest of almost all Asia Minor.
3671	333	Alexander is seized at Tarsus with a dangerous illness, from having bathed in the river Cydnus. He is cured in a few days.
		Battle of Issus.
3672	332	Alexander makes himself master of Tyre, after a siege of seven months.
		Apelles, one of the most famous painters of antiquity. Aristides and Protagoras were his contemporaries.
		Alexander goes to Jerusalem. He makes himself master of Gaza, and soon after of all Egypt. He went after this conquest to the temple of Jupiter Ammon, and at his return built the city of Alexandria.
3673	331	Battle of Arbela. It is followed with the taking of Arbela, Babylon, Susa, and Persepolis.
3674	330	Darius is seized and laden with chains by Bessus, and soon after assassinated. His death puts an end to the Persian empire, which had subsisted 266 years from its foundation under Cyrus the Great.
		The Lacedæmonians revolt against the Macedonians. Antipater defeats them in a battle, wherein Agis their king is killed.
		Thalestris, queen of the Amazons, comes to see Alexander at Zadracarta.
		Philotas, and Parmenio his father, suspected of having conspired with others against Alexander, are put to death.
3675	329	Bessus is brought to Alexander, and soon after put to death.
		Alexander, after having subdued the Sogdians and Bactrians, builds a city upon the Iaxartes, to which he gives his name.
		Embassy of the Scythians to Alexander, followed by a victory gained by him over that people.
		Lyippus of Sicily, a famous sculptor, flourished about this time.
3676	328	Alexander makes himself master of the rocky eminence of Oxyzus.
		Citus is killed by Alexander at a feast in Alarcanda. The death of Callisthenes happens soon after Alexander marries Roxana; the daughter of Oxyartes.
3677	327	Alexander's entrance into India. He gains a great victory over Porus in passing the Hydaspes.
3678	326	On the remonstrances of his army, Alexander determines to march back.
		The city of Oxydracæ taken. Alexander in great danger there.
3679	325	Alexander's marriage with Statira, the eldest daughter of Darius.
		Revolt of Harpalus, whom Alexander had made governor of Babylon.
		Demosthenes is banished for having received presents, and suffered himself to be corrupted by Harpalus.
3680	324	Death of Hephæstion at Ecbatana.
		Menander, the inventor of the new comedy, lived about this time.
3681	323	Alexander, on his return to Babylon, dies there, at the age of two and thirty years and eight months. Aridæus, that prince's natural brother, is declared king in his stead. The regency of the kingdom is given to Perdicas.
		The generals divide the provinces amongst themselves. From this division commences the era of the empire of the Lagidæ in Egypt.
		The Athenians revolt, and engage the states of Greece to enter into a league with them. Demosthenes is recalled from banishment.
3682	322	Antipater is besieged in Lamia by the Athenians, and is forced to surrender by capitulation. He soon after seizes Athens, and puts a garrison into it.

A. M.		A. C.		Persians and Grecians.	
3682	322	Death of Demosthenes.			
3683	321	Alexander's magnificent funeral.			
		Perdiccas puts Eumenes into possession of Cappadocia.			
		League of Ptolemy, Craterus, Antipater, and Antigonus, against Perdiccas and Eumenes.			
		Death of Craterus.			
		Unfortunate end of Perdiccas in Egypt. Antipater succeeds him in the regency of the empire.			
3684	320	Eumenes defeated by Antigonus; shuts himself up in the castle of Nora, where he sustains a siege of a year.			
3685	319	Ptolemy makes himself master of Jerusalem.			
		Death of Antipater. Polysperchon succeeds him.			
		Phocion's condemnation and death at Athens.			
3687	317	Cassander, the son of Antipater, seizes Athens, and settles Demetrius Phalereus there to govern the republic.			
		Olympias, the mother of Alexander, causes Aridæus and Eurydice his wife to be put to death, as she herself is soon after, by order of Cassander.			
3688	315	Eumenes is delivered up to Antigonus by his own soldiers, and put to death.			
3691	313	Antigonus takes Tyre, after a siege of fifteen months. Demetrius his son, surnamed Poliorcetes, begins to appear.			
3692	312	Zeno institutes the sect of the Stoics at Athens.			
3693	311	Seleucus makes himself master of Babylon and the neighbouring provinces.			
		At this expedition of Seleucus against Babylon, begins the famous era of the Seleucidæ, called by the Jews the era of contracts.			
		Ptolemy retires into Egypt, and carries a great number of the inhabitants of Phenicia and Judea thither along with him.			
		Cassander causes Roxana and her son Alexander to be put to death.			
3695	309	Polysperchon puts Hercules, the son of Alexander, and his mother Berenice, to death.			
3696	308	Ophellus, governor of Libya, revolts against Ptolemy.			
3698	306	Demetrius Poliorcetes makes himself master of Athens, and re-establishes the democratical government.			
		The same year he makes himself master of Salamis, and the whole island of Cyprus.			
		Demetrius Phalereus, who commanded at Athens, retires to Thebes. The Athenians throw down his statues, and condemn him to death.			
		Antigonus and his son Demetrius assume the title of kings. The other princes follow their example, and do the same.			
3699	305	Antigonus, to make the most of his son's victory in Cyprus, undertakes to deprive Ptolemy of Egypt. That expedition does not succeed.			
		Ptolemy the astronomer fixes the beginning of the reign of Ptolemy king of Egypt, on the 7th of November of this year.			
3700	304	Demetrius Poliorcetes forms the siege of Rhodes, which he is forced to raise a year after.			
3701	303	The Rhodians employ the money raised by the sale of the machines which Demetrius had used in the siege of their city, and had given them as a present, in erecting the famous Colossus, called the Colossus of Rhodes.			
		Demetrius Poliorcetes is declared general of all the Greeks, by the estates of Greece assembled at the isthmus.			
3702	302	Ptolemy, Seleucus, Cassander, and Lysimachus, enter into a league against Antigonus and Demetrius his son.			
		Battle of Ipsus, wherein Antigonus is killed. It is followed by the division of the empire of Alexander amongst the four allied princes.			
		Argeusilaus, founder of the middle academy.			
<i>There is so much connexion between the events which happened in the four empires formed out of Alexander's, that it is impossible to separate them: for which reason I shall dispose them all in one column, according to the plan I have followed in treating them in the body of my History. I shall first give a table, that contains only the kings that reigned in each of those kingdoms.</i>					
		<i>Egypt.</i>	<i>Syria.</i>	<i>Macedonia.</i>	<i>Thrace and Bythinia.</i>
3704	300	Ptolemy Soter.	Seleucus Nicator.	Cassander.	Lysimachus.
3707	297			Philip and Alexander, the sons of Cassander, dispute the kingdom and possess it almost three years.	
				Demetrius Poliorcetes.	
				Pyrrius and Lysimachus.	
3710	294			Seleucus Nicator, a very short time.	Lysimachus is killed in a battle. After his death his dominions are dismembered, and cease to form a distinct kingdom.
3717	287	Ptolemy Philadelphus.			
3719	285				
3723	281				
		<i>Egypt.</i>	<i>Syria.</i>	<i>Macedonia.</i>	
3724	280		Antiochus Soter.	Ptolemy Ceraunus. His brother Melaeger reigned some time after him.	
3725	278			Sothenes.	
3728	276			Antigonus Gonatas.	
3743	261		Antiochus Theos.		
3755	246	Ptolemy Euergetes.	Seleucus Callinicus.		
3762	242			Demetrius, son of Antigonus Gonatas.	
				Antigonus Doson.	
3772	232		Seleucus Ceraunus.		
3778	226		Antiochus the Great.		
3781	223				
3783	221	Ptolemy Philopator.			
3784	220			Phillip.	
3800	204	Ptolemy Epiphanes.			
3817	187		Seleucus Philopator.		
3824	180	Ptolemy Philometor.			
3825	179			Perseus, the last king of the Macedonians.	
		<i>Egypt.</i>	<i>Syria.</i>		
3829	175		Antiochus Epiphanes.		
3840	164		Antiochus Eupator.		
3842	162		Demetrius Soter.		
3854	150		Alexander Bala.		
3859	145	Ptolemy Physcon.	Demetrius Nicator.		
3860	144		Antiochus Theos, the son of Bala, seizes part of Syria. Tryphon does the same soon after.		
			Antiochus Sidetes puts Tryphon to death, and reigns in his room.		
3864	140		Zebina succeeds Demetrius Nicator.		
3877	127		Seleucus, the son of Nicator.		
3880	124		Antiochus Grypus.		

A. M.	A. C.	Egypt.	Syria.
3887	117	Ptolemy Lathyrus.	Antiochus the Cyzicenean divides the kingdom with Grypus.
3890	114		
3887	107		
3907	97		
3911	93		
3912	92	Alexander I. brother of Lathyrus.	Seleucus, son of Grypus.
3913	91		Antiochus Eusebes.
3914	90		Antiochus, second son of Grypus.
3915	89		Philip, third son of Grypus.
3916	88		Demetrius Eucheres, fourth son of Grypus.
3921	83	Alexander II. son of Alexander I.	Antiochus Dionysius, fifth son of Grypus.
3923	81		The four last named kings reigned successively with Eusebes.
3935	69		Tigranes, during fourteen years.
3939	65		Antiochus Asiaticus.
3946	58		
3953	51	Berenice, the eldest daughter of Auletes, reigns some time in his stead; after which that prince is restored. Cleopatra reigns at first with her eldest brother, then with Ptolemy her youngest brother, and at last alone.	
Alexander's Successors.			
3704	300	Seleucus, king of Syria, builds Antioch.	
3707	297	Athena refuses to receive Demetrius Poliorcetes.	
3709	295	Death of Cassander, king of Macedon. Philip his son succeeds him. He reigns only one year, and is succeeded by Alexander his brother. About this time Pyrrhus, king of Epirus, espouses Antigone, of the house of Ptolemy, and returns into his dominions, out of which he had been driven by the Molossai.	
3710	294	Demetrius Poliorcetes retakes Athens. Lysimachus and Ptolemy, almost at the same time, deprive him of all he possessed.	
3711	293	Demetrius puts to death Alexander king of Macedonia, who had called him in to his aid, and seizes his dominions, where he reigns seven years.	
3717	287	Foundation of the city of Seleucia by Seleucus.	
3719	285	Pyrrhus and Lysimachus take Macedonia from Demetrius. The latter dies miserably the year following in prison.	
3721	283	Ptolemy Soter, king of Egypt, resigns the throne to his son Ptolemy Philadelphus.	
3722	282	Foundation of the kingdom of Pergamus by Philetærus.	
3723	281	Demetrius Phalereus is shut up in a fort by order of Philadelphus, and kills himself there.	
3724	280	Seleucus Nicator, king of Syria, declares war against Lysimachus, king of Macedonia.	
3725	279	Lysimachus is killed in a battle in Phrygia. Seleucus enters Macedonia to take possession of the kingdom. He is assassinated there by Ceraunus. Antiochus Soter, his son, succeeds him in the kingdom of Syria.	
3726	278	Ceraunus, to secure the kingdom of Macedonia to himself, puts the two children of Lysimachus by Arsinoë to death, and banishes her into Samothracia.	
3727	277	The republic of the Achæans resumes its ancient form, which it had lost under Philip and Alexander.	
3728	276	Pyrrhus, king of Epirus, called in by the Tarentines, goes to Italy to make war against the Romans. He gives them battle for the first time near Heraclea, where the advantage is entirely on his side. He is again successful in a second battle fought the year following.	
3729	275	Pyrrhus and Lysimachus take Macedonia from Demetrius. The latter dies miserably the year following in prison.	
3730	274	Pyrrhus abandons Italy, and goes to Sicily, which he conquers.	
3731	273	Sothenes drives the Gauls out of Macedonia. He is made king there, and reigns two years.	
3732	272	Attempt of the Gauls upon the temple of Delphi.	
3733	271	Ptolemy Philadelphus, king of Egypt, causes the Holy Scriptures to be translated into Greek.	
3734	270	Death of Sothenes. Antigonus Gonatas, son of Poliorcetes, who reigned afterwards during ten years in Greece, makes himself king of Macedonia in his room. Antiochus, king of Syria, disputes the possession of it with him. Their difference terminates by the marriage of Antigonus with Phila the daughter of Stratonice and Seleucus.	
3735	269	Antiochus defeats the Gauls in a bloody battle, and delivers the country from their oppressions. By this victory he acquires the name of Soter.	
3736	268	Pyrrhus returns into Italy, and is defeated by the Romans. He goes to Macedonia, where he attacks and defeats Antigonus.	
3737	267	Ptolemy Philadelphus, in consequence of the reputation of the Romans, sends an embassy to them to demand their amity.	
3738	266	Pyrrhus undertakes the siege of Sparta, and cannot reduce it. He is killed the next year at the siege of Argos.	
3739	265	Antigonus Gonatas makes himself master of Athens, which had entered into a league with the Lacedæmonians against him.	
3740	264	Abantidas makes himself tyrant of Sicily, after having put Clinias its governor to death.	
3741	263	Magus, governor of Cyrenaica and Libya, revolts against Ptolemy Philadelphus.	
3742	262	Death of Philetærus, king and founder of Pergamus. Eumenes his nephew succeeds him.	
3743	261	Antiochus Soter, king of Syria, causes his son Antiochus to be proclaimed king. He dies soon after.	
3744	260	Berosus of Babylon, the historian, lived about this time.	
3745	259	Accommodation between Magus and Ptolemy Philadelphus.	
3746	258	War between Antiochus, king of Syria, and Ptolemy Philadelphus.	
3747	257	Aratus, the son of Clinias, delivers Sicily from tyranny, and unites it with the Achæan league.	
3748	256	Arasce revolts against Agathocles, governor for Antiochus in the country of the Parthians. About the same time Theodorus governor of Bactriana revolts, and causes himself to be declared king of that province.	
3749	255	Treaty of peace between Antiochus and Ptolemy Philadelphus, which puts an end to the war. By one of the conditions of that treaty, Antiochus repudiates Laodice, and marries Berenice, Ptolemy's daughter.	
3750	254	Agis, king of Sparta, endeavours to revive the ancient institutions of Lycurgus. Leonidas, his colleague, is deposed for refusing to consent to it. Cleombrotus, his son-in-law, reigns in his stead.	
3751	253	Death of Ptolemy Philadelphus, king of Egypt. Ptolemy Evergetes his son succeeds him.	
3752	252	Apollonius of Rhodes, author of a poem upon the expedition of the Argonauts.	
3753	251	Antiochus, surnamed Theos, king of Syria, is poisoned by his wife Laodice. She afterwards causes her son Seleucus Callinicus to be declared king.	
3754	250	Berenice, and her son by Antiochus, are assassinated by Laodice.	
3755	249	Ptolemy Evergetes, Berenice's brother, undertakes to revenge her death. He makes himself master of great part of Syria.	
3756	248	The cities of Smyrna and Magnesia enter into an alliance to aid the king of Syria against Ptolemy Evergetes.	
3757	247	Aratus makes himself master of the citadel of Corinth.	
3758	246	Leonidas is restored at Sparta, Cleombrotus sent into banishment, and Agis put to death.	
3759	245	Death of Antigonus Gonatas, king of Macedonia. Demetrius his son succeeds him.	
3760	244	Seleucus, king of Syria, enters into a war with Antiochus Hierax his brother. The latter has the advantage in a battle near Ancyra in Galatia.	
3761	243	Death of Eumenes, king of Pergamus. Attalus his cousin-german succeeds him.	
3762	242	Eratothènes, the Cyrenian, is made librarian to Ptolemy Evergetes.	

A. M. A. C.		Alexander's Successors.
3771	233	Joseph, nephew of the high-priest Onias, is sent ambassador to Ptolemy Euergetes.
3772	232	Death of Demetrius, king of Macedonia. Antigonus, guardian of Philip, son of Demetrius, succeeds him.
3774	230	Polycleus of Sicyon, a famous sculptor.
3776	228	Seleucus, king of Syria, is defeated and taken prisoner by Arsaces, king of the Parthians.
3778	226	Cleomenes, king of Sparta, gains a great victory over the Achæans and Aratus.
		Seleucus Callinicus, king of Syria, dies amongst the Parthians of a fall from his horse. Seleucus Ceraunus his eldest son succeeds him.
		Antiochus Hierax is assassinated by thieves on leaving Egypt.
		Aratus defeats Aristippus, tyrant of Argos. He prevails upon Lysias, tyrant of Megalopolis, to renounce the tyranny, and makes his city enter into the Achæan league.
3779	225	The Romans send a famous embassy into Greece, to impart to the Greeks the treaty they had lately concluded with the Illyrians. The Corinthians declare, by a public decree, that they shall be admitted to a share in the celebration of the Isthmian games. The Athenians also grant them the freedom of Athens.
		Antigonus, king of Macedon, by the intrigues of Aratus, is called in to aid the Achæans against the Lacedæmonians.
3781	223	Cleomenes, king of Sparta, takes Megalopolis.
		Battle of Selasus, followed with the taking of Sparta by Antigonus.
3782	222	Death of Seleucus Ceraunus, king of Syria. Antiochus his brother, surnamed the Great, succeeds him.
3783	221	The Colossus of Rhodes is thrown down by a great earthquake.
		Death of Ptolemy Euergetes, king of Egypt. Ptolemy Philopator succeeds him.
3784	220	The Ætolians gain a great victory at Caphye over the Achæans.
		Antiochus reduces Molon and Alexander, who had revolted against him two years before; the first in Media, the second in Persia.
		Death of Antigonus king of Macedonia. Philip, the son of Demetrius, succeeds him.
		Cleomenes, king of Sparta, dies in Egypt. The Lacedæmonians elect Agesipolis and Lycurgus to succeed him.
3785	219	War of the allies with the Ætolians, in favour of the Achæans.
3787	217	Hermias, prime minister of Antiochus, is put to death by that prince's orders.
		Battle of Raphia, between Ptolemy king of Egypt, and Antiochus king of Syria.
		Treaty of peace between Philip, king of Macedonia, and the Achæans, on one side, and the Ætolians on the other, which puts an end to the war of the allies.
3788	216	Antiochus besieges Cretan, who had revolted, in Sardis, and after a siege of two years he is delivered up by the treachery of Cretan.
		Hannibal's alliance with Philip, king of Macedonia.
3789	215	Philip receives a considerable blow from the Romans at the siege of Apollonia.
3790	214	Carneades, founder of the new academy.
3792	212	Antiochus undertakes to reduce the provinces which had thrown off the yoke of the Syrian empire, and effects it in the space of seven years.
3793	211	Alliance of the Ætolians with the Romans. Attalus, king of Pergamus, enters into it. The Lacedæmonians come into it some time after.
3796	208	Famous battle between Philip, king of Macedonia, and the Ætolians, near Elis. Philopomen distinguishes himself in it.
3798	206	Battle of Mantinea, wherein Philopomen defeats Machanidas, tyrant of Sparta, who perishes in it. Nabis is set in his place.
3800	204	Treaty of peace between Philip and the Romans. All the allies on both sides are included in it.
		Polybius is said to have been born this year.
		Death of Ptolemy Philopator, king of Egypt.
		Ptolemy Epiphanes, at that time only five years old, succeeds him.
3801	203	League between Philip king of Macedon, and Antiochus, king of Syria, against the young king of Egypt.
3802	202	Philip, king of Macedonia, is defeated by the Rhodians in a sea-fight off the island of Chios. That prince's cruel treatment of the Cynæans seems to be properly dated the following year.
3803	201	Philip besieges and takes Abydos.
3804	200	The Romans declare war against Philip. P. Sulpitius is appointed to command in it. He gains a considerable victory near the town of Ocotophus in Macedonia.
3806	199	Villicus succeeds Sulpitius in the command of the army against Philip. The year following Flamininus is sent to succeed Villicus.
3806	198	Antiochus, king of Syria, subjects Palestine and Cœle-syria.
		The Achæans declare for the Romans against Philip.
3807	198	Interview of Philip and the consul Flamininus.
		Nabis, tyrant of Sparta, declares for the Romans. The Boeotians do the same.
		Death of Attalus, king of Pergamus. Eumenes succeeds him.
		Battle of Cynoscephalæ, where the Romans gain a complete victory over Philip.
3808	196	Treaty of peace between Philip and the Romans, which puts an end to the war.
		Embassy of the Romans to Antiochus the Great, in order to be assured whether the complaints against him were justly founded.
		Conspiracy of Scopas the Ætolian, against Ptolemy Epiphanes, discovered and punished.
3809	195	Flamininus makes war against Nabis, the tyrant of Sparta.
3813	191	Philopomen gains a considerable advantage over Nabis, near Sparta.
		The Ætolians resolve to seize Demetrius, Chalcis, and Sparta, by treachery and stratagem.
		Nabis is killed. Philopomen makes the Lacedæmonians enter into the Achæan league.
		Antiochus goes into Greece to the aid of the Ætolians. The Romans declare war against him, and soon after defeat him near the straits of Thermopylæ.
3814	190	Battle of Magnesia, followed by a treaty of peace, which puts an end to the war between the Romans and Antiochus, which had subsisted about two years.
		The philosopher Panætius was born about this time.
3815	189	The consul Fulvius forces the Ætolians to submit to the Romans. Manlius, his colleague, almost at the same time subjects all the Gauls in Asia.
		The cruel treatment of the Spartans by their exiles, supported by Philopomen, happened this year.
3817	187	Antiochus the Great, king of Syria, is killed in the temple of Jupiter Belus, which he had entered in order to plunder it. Seleucus Philopator succeeds him.
3821	183	Philopomen is taken before Messene by Dinocrates, and put to death.
3823	181	Demetrius, son of Philip king of Macedonia, is unjustly accused by his brother Perseus, and put to death.
3824	180	Death of Ptolemy Epiphanes, king of Egypt. Ptolemy Philometor succeeds him.
3825	179	Death of Philip, king of Macedonia. Perseus his son succeeds him.
3829	175	Seleucus Philopator, king of Syria, is poisoned by Heliodorus, whom he had sent a little before to take Jerusalem. He is succeeded by Antiochus Epiphanes.
3830	174	Antiochus Epiphanes causes Onias the high priest of Jerusalem to be deposed, and sets Jason in his place.
3833	171	War between Antiochus and Ptolemy Philometor.
		The Romans declare war against Perseus. That prince has some advantage in the first battle near the river Peneus.
3834	170	Antiochus Epiphanes makes himself master of all Egypt. He marches afterwards to Jerusalem, where he commits unheard-of cruelties.
3836	169	The Alexandrians, in the room of Philometor, who had fallen into the hands of Antiochus, make Ptolemy Euergetes, his younger brother, king.
		Philometor is set at liberty the same year, and unites with his brother. That union induces Antiochus to renew the war.

Alexander's Successors.

<i>B. M.</i>	<i>A. C.</i>	
3336	165	Paulus Æmilius is charged with the Macedonian war, against Perseus. He gains a famous victory over that prince near Pydna, which puts an end to the kingdom of Macedonia. It was not reduced however, into a province of the Roman empire, till twenty years after.
		The pretor Anicius subjects Ilyria in thirty days.
		Popilius, one of the ambassadors sent by the Romans into Egypt, obliges Antiochus to quit it, and comes to an accommodation with the two brothers.
		Antiochus, exasperated at what had happened in Egypt, turns his rage against the Jews, and sends Apollonius to Jerusalem.
		The same year he publishes a decree, to oblige all nations in subjection to him to renounce their own religion, and conform to his. This law occasions a cruel persecution amongst the Jews.
3337	167	Antiochus goes in person to Jerusalem, to see his orders put in execution. The martyrdom of the Maccabees, and the death of Eleazar, happened at that time.
		Paulus Æmilius abandons the cities of Epirus to be plundered by his army, for having taken Perseus's part.
		The Achæans, suspected of having favoured that prince, are sent to Rome to give an account of their conduct.
		The senate banish them into different towns of Italy, from whence they are not suffered to return home till seventeen years after. Polybius was of this number.
3339	166	Prusias, king of Bithynia, goes to Rome. Eumenes, king of Pergamus, is not permitted to enter it.
		Death of Mattathias. Judas his son succeeds him, and gains many victories over the generals of Antiochus.
3340	164	Antiochus Epiphanes is repulsed before Elymais, where he intended to plunder the temple. He marches towards Judæa, with design to exterminate the Jews. The hand of God strikes him on the way, and he dies in the most exquisite torments. Antiochus Eupator, his son, succeeds him.
3341	163	Antiochus Eupator marches against Jerusalem. He is soon after obliged to return into Syria, in order to expel Philip of Antioch, who had made himself master of his capital.
3342	162	Difference between Philometor, king of Egypt, and Physcon his brother, which does not terminate till after the expiration of five years.
		Octavius, ambassador for the Romans in Syria, is assassinated.
		Demetrius Soter, the son of Seleucus Philopator, flies from Rome, where he had been kept as a hostage, to Syria, where he causes Antiochus Eupator to be put to death, and seizes the throne.
3343	161	Death of Judas Maccabeus.
3344	160	Demetrius is acknowledged king of Syria by the Romans.
3345	159	Death of Eumenes, king of Pergamus. Attalus Philometor succeeds him.
3348	156	War between Attalus and Prusias.
3351	153	Alexander Bala pretends to be the son of Antiochus Epiphanes, and in that quality attempts to cause himself to be acknowledged king of Syria.
3352	152	Andronicus of Adramyttium pretends himself the son of Perseus, and undertakes to cause himself to be declared king of Macedonia. He is conquered, taken, and sent to Rome by Metellus.
3354	150	Demetrius Soter is killed in a battle between him and Alexander Bala. His death leaves the latter in possession of the empire of Syria.
3356	149	Macedonia is reduced into a province of the Roman empire.
3357	147	Troubles in Achaia promoted by Dimeus and Critolaus. The commissioners sent thither by the Romans are insulted.
3358	146	Metellus goes to Achaia, where he gains several advantages over the Achæans. Mummius succeeds him; and, after a great battle near Leucopetra, takes Corinth, and entirely demolishes it.
		Greece is reduced into a Roman province, under the name of the province of Achaia.
		<i>The sequel of the history of the kings of Syria is much embroiled; for which reason I shall separate it from that of the Egyptians, in order to complete its chronology.</i>
		<i>Syria.</i>
3359	145	Demetrius Nicator, son of Demetrius Soter, defeats Alexander Bala, and ascends the throne.
3360	144	Antiochus, surnamed Theos, son of Bala, supported by Tryphon, makes himself master of part of the kingdom.
3363	141	Demetrius marches against the Parthians. After some small advantages, he is taken prisoner.
		Tryphon gets Jonathan into his hands, and puts him to death at Ptolemais. The year following he murders his pupil Antiochus, and seizes the kingdom of Syria.
3364	140	Antiochus Sidetes, the second son of Demetrius Soter, marries Cleopatra, the wife of his brother Demetrius Nicator, and after having put Tryphon to death, he is declared king himself.
3366	138	Antiochus Sidetes besieges John Hyrcanus in Jerusalem, and takes the city by capitulation.
3368	136	Antiochus marches against the Parthians, and gains many advantages over them. They send back Demetrius the year following.
3369	135	
3371	133	
3373	131	
3374	130	Demetrius Nicator reigns again in Syria.
3377	127	Demetrius is killed by Alexander Zebina, who takes his place, and causes himself to be acknowledged king of Syria.
3380	124	Seleucus V. eldest son of Demetrius Nicator is declared king, and soon after killed by Cleopatra. Antiochus Grypus succeeds him.
3382	122	Cleopatra attempts to poison Grypus, and is poisoned herself.
3384	120	
3387	117	
3390	114	Antiochus the Cyziceniian, son of Cleopatra and Antiochus Sidetes, takes arms against Cyprus. He has the worm in the beginning; but two
		<i>Egypt.</i>
		Death of Ptolemy Philometor. Ptolemy Physcon, his brother, succeeds him.
		Death of Attalus king of Pergamus. Attalus his nephew, surnamed Philometor, succeeds him. He reigns five years.
		The cruelties of Physcon at Alexandria oblige most of the inhabitants to quit the place.
		(Attalus Philometor, king of Pergamus, at his death leaves his dominions to the Roman people. Adrogeus seizes them.)
		(The consul Perpenna defeats Adronicus, and sends him to Rome. The kingdom of Pergamus is reduced the year following into a Roman province by Manius Aquilius.)
		Physcon repudiates Cleopatra, his first wife, and marries her daughter of the same name. He is soon after obliged to fly, and the Alexandrians give the government to Cleopatra, whom he had repudiated.
		Physcon re-ascends the throne of Egypt.
		Physcon gives his daughter in marriage to Grypus, king of Syria.
		Death of Physcon. Ptolemy Lathyrus succeeds him. Cleopatra, his mother, obliges him to repudiate Cleopatra, his eldest sister, and to marry Selene, his youngest.

		<i>Syria.</i>		<i>Egypt.</i>
<i>A. M.</i>	<i>A. C.</i>			
3891	113		years after obliges his brother to divide the kingdom of Syria with him.	Cleopatra, queen of Egypt, gives the kingdom of Cyprus to Alexander her youngest son.
3897	107			Cleopatra drives Lathyrus out of Egypt, and places his brother Alexander upon the throne.
3900	104			Signal victory of Lathyrus over Alexander, king of the Jews, upon the banks of the Jordan.
3901	103			Cleopatra forces Lathyrus to raise the siege of Ptolemais, and takes that city herself.
3903	101			Cleopatra takes her daughter Selene from Lathyrus, and makes her marry Antiochus the Cyzicenean.
3907	97	Death of Grypus. Seleucus, his son, succeeds him.	Antiochus the Cyzicenean is defeated and put to death.	
3910	94	Seleucus is defeated by Eusebes, and burned in Mopsuestia.	Antiochus Eusebes, the son of the Cyzicenean, causes himself to be declared king. He marries Selene the widow of Grypus.	
3911	93	Antiochus, brother of Seleucus and second son of Grypus, assumes the diadem. He is presently after defeated by Eusebes, and drowned in the Orontes.		
3912	92			
3913	91	Philip, his brother, third son of Grypus, succeeds him.		
3914	90	Demetrius Eucherus, fourth son of Grypus, is established king at Damascus, by the aid of Lathyrus.	Eusebes, defeated by Philip and Demetrius, retires to the Parthians, who re-establish him upon the throne two years after.	Alexander kills his mother Cleopatra.
3915	89			Alexander is expelled and dies soon after.
3916	88	Demetrius having been taken by the Parthians, Antiochus Dionysius, the fifth son of Grypus, is set upon the throne, and killed the following year.		Lathyrus is recalled.
3919	85			
3921	83	The Syrians, weary of so many changes, choose Tigranes, king of Armenia, for their king. He reigns fourteen years by a viceroy.	Eusebes takes refuge in Cilicia, where he remains concealed.	Lathyrus ruins Thebes, in Egypt, where the rebels he had before defeated had taken refuge.
3922	82			
3923	81			Death of Lathyrus. Alexander II. son of Alexander I. under the protection of Sylla, is elected king.
3928	76			Death of Nicomedes king of Bithynia. His kingdom is reduced into a Roman province; as is also Cyrenia the same year.
3935	69	Tigranes recalls Magdalus his viceroy in Syria.	Antiochus Asiaticus takes possession of Syria, and reigns four years.	Alexander is driven out of Egypt.
3939	65		Pompey deprives Antiochus Asiaticus of his dominions, and reduces Syria into a Roman province.	Ptolemy Auletes, Lathyrus's natural son, is set in his place.
<i>Egypt.</i>				
3946	58	The Romans depose Ptolemy, king of Cyprus, and seize that island. Ptolemy Auletes is obliged to fly from Egypt. Berenice, the eldest of his daughters, is declared queen in his stead.		Cato is charged with that commission.
3949	55	Gabinus and Antony restore Auletes to the entire possession of his dominions.		
3953	51	Death of Ptolemy Auletes. He leaves his dominions to his eldest son, and his eldest daughter, the famous Cleopatra.		
3956	48	Ponthisus and Achilles, the young king's guardians, deprive Cleopatra of her share in the government, and drive her out of Egypt.		
3957	47	Death of the king of Egypt. Caesar places Cleopatra upon the throne, with Ptolemy her young brother.		
3961	43	Cleopatra poisons her brother when he comes of age to share the sovereign authority according to the laws. She afterwards declares for the Roman triumviri.		
3963	41	Cleopatra goes to Antony at Tarsus in Cilicia. She gains the ascendant over him, and carries him with her to Alexandria.		
3971	33	Antony makes himself master of Armenia, and brings the king prisoner to Cleopatra. Coronation of Cleopatra and all her children.		
3972	31	Rupture between Caesar and Antony. Cleopatra accompanies the latter, who repudiates Octavia at Athens.		
3973	31	Cleopatra flies at the battle of Actium. Antony follows her, and thereby abandons the victory to Caesar.		
3974	30	Antony dies in the arms of Cleopatra. Caesar makes himself master of Alexandria. Cleopatra kills herself. Egypt is reduced into a Roman province.		
		<i>Cappadocia.</i>	<i>Parthian Empire.</i>	<i>Pontus.</i>
3490	514			The kingdom of Pontus was founded by Darius the son of Hystaspes, in the year 3490. Ariabazus was the first king of it. His successors, down to Mithridates, are little known.
3600	401			Mithridates I. He is commonly considered as the founder of the kingdom of Pontus.
3636	366			Ariobarzanes. He reigns 26 years.
3644	360	Ariarathes I. was the first king of Cappadocia. He reigned jointly with his brother Holophernes.		Mithridates II. He reigns 35 years.
3667	337			
3668	336	Ariarathes II. son of the first. He was deprived of his dominions by Perdiccas, who sets Eumenes on the throne.		
3689	315	Ariarathes III. ascends the throne of Cappadocia after the death of Perdiccas and Eumenes.		
3702	302			
3720	284	Ariannes.		
3754	250	Ariarathes IV.	Arsaces I. founder of the Parthian empire.	Mithridates III. He reigns 33 years. The reigns of the three kings who succeed him include the space of a hundred years. The last of them was Mithridates IV. great grandfather of Mithridates the great.
			Arcases II. brother of the first.	

A.M.C. 2.		Cappadocia.	Parthian Empire.	Pontus.

		dates.		in Asia Minor to be massacred in one
				day.
				Archelaus, one of the generals of
				Mithridates, seizes Athens and most
				of the cities of Greece.
				Sylla is charged with the war
				against Mithridates. He retakes
				Athens after a long siege.
				Victory of Sylla over the generals
				of Mithridates near Charonea. He
				gains a second battle soon after at
				Orchomenus.
				Treaty of peace between Mithri-
				dates and Sylla, which terminates
				the war.
				Mithridates puts his son to death.
				Second war between Mithridates
				and the Romans. It subsists some-
				thing less than three years.
				Mithridates makes an alliance
				with Sertorius.
				Beginning of the third war of
				Mithridates against the Romans.
				Lucullus and Cotta are placed at
				the head of the Roman army.
				Cotta is defeated by sea and land,
				and forced to shut himself up in
				Chalcedon. Lucullus goes to his
				aid.
				Mithridates forms the siege of Cy-
				zicum. Lucullus obliges him to
				raise it at the end of two years, and
				pursues and beats him near the
				Granicus.
				Mithridates defeated in the plains
				of Cabire. He retires to Tigranes.
				Lucullus declares war against
				Tigranes, and soon after defeats
				him, and takes Tigranocerta, the
				capital of Armenia.
				Lucullus defeats Tigranes and
				Mithridates, who had joined their
				forces near the river Arsania.
				Mithridates recovers all his domi-
				nions, in consequence of the mis-
				understandings that take place in
				the Roman army.
				Pompey is appointed to succeed
				Lucullus. He gains many advan-
				tages over Mithridates, and obliges
				him to fly.
				Tigranes surrenders himself to
				Pompey.
				Pompey makes himself master of
				Caina, in which the treasures of
				Mithridates were laid up.
				Death of Mithridates. Pharnaces
				his son, whom the army had elected
				king, submits his person and domi-
				nions to the Romans

A. M.	A. C.	Syracuse.	Carthage.
3510	503	Syracuse is said to have been founded in the year of the world 3295; before Christ 709	Carthage was founded in the year of the world 3158, before Christ 846.
			First treaty between the Carthaginians and Romans. It appears that the Carthaginians had carried their arms into Sicily before this treaty, as they were in possession of part of it when it was concluded: but what year they did so is not known.
3520	484	Gelon's beginning.	The Carthaginians make an alliance with Xerxes.
3523	481		The Carthaginians, under Amilcar, attack the Greeks settled in Sicily. They are beaten by Gelon.
3525	479	Gelon is elected king of Syracuse. He reigns 5 or 6 years.	
3532	472	Hiero I. He reigns 11 years.	
3543	461	Thrasybulus. In a year's time he is expelled by his subjects.	
3544	460	The Syracusans enjoy their liberty during sixty years.	
3589	415	The Athenians, assisted by the people of Segesta, undertake the siege of Syracuse under their general Nicias. They are obliged to raise it at the end of two years. The Syracusans pursue and defeat them entirely.	The Carthaginians send troops under Hannibal, to aid the people of Segesta against the Syracusans.
3593	411	Beginning of Dionysius the elder.	Hannibal and Imilco are sent to conquer Sicily. They open the campaign with the siege of Agrigentum.
3595	409		The war made by the Carthaginians in Sicily is terminated by a treaty of peace with the Syracusans.
3598	406	Dionysius, after having deposed the ancient magistrates of Syracuse, is placed at the head of the new ones, and soon after causes himself to be declared generalissimo.	
3600	404	Revolt of the Syracusans against Dionysius, upon account of the taking of Gela by the Carthaginians. It is followed by a treaty of peace between the Carthaginians and Syracusans, by one of the conditions of which Syracuse is to continue in subjection to Dionysius. He establishes the tyranny in his own person.	
		New troubles at Syracuse against Dionysius. He finds means to put an end to them.	
3605	399	Dionysius makes great preparations for a new war with the Carthaginians.	
3607	397	Massacre of all the Carthaginians in Sicily, followed by a declaration of war, which Dionysius caused to be signified to them by a herald, whom he despatched to Carthage.	Imilco goes to Sicily with an army to carry on the war against Dionysius. It subsists four or five years.
3615	389	Dionysius takes Rhegium by capitulation. The next year he breaks the treaty, and makes himself master of it again by force.	
3622	372	Death of Dionysius the elder. His son, Dionysius the younger, succeeds him. By the advice of Dion, his brother-in-law, he causes Plato to come to his court.	
		Dion, banished by the order of Dionysius, retires into Peloponnesus.	
3643	361	Dionysius makes Arete his sister, the wife of Dion, marry Timocrates, one of his friends. That treatment makes Dion resolve to attack the tyrant with open force.	
3644	360	Dion obliges Dionysius to abandon Syracuse. He sets sail for Italy.	
3646	353	Callippus causes Dion to be assassinated, and makes himself master of Syracuse, where he reigns about thirteen months.	
3647	357	Hipparchus, brother of Dionysius the younger, drives Callippus out of Syracuse, and establishes himself in his place for two years.	
3651	350	Dionysius reinstated.	
3656	343	The Syracusans call in Timoleon to their aid.	Second treaty of peace concluded between the Romans and Carthaginians.
3657	347	Dionysius is forced by Timoleon to surrender himself and to retire to Corinth.	The Carthaginians make a new attempt to seize Sicily. They are defeated by Timoleon, sent by the Corinthians to the aid of the Syracusans.
3658	346	Timoleon abolishes tyranny at Syracuse, and throughout Sicily, the liberty of which he reinstates.	Hanno, a citizen of Carthage, forms a design of making himself master of his country.
3672	332		Embassy of Tyre to Carthage, to demand aid against Alexander the Great.
3685	319	Agathocles makes himself tyrant of Syracuse.	Beginning of the wars between the Carthaginians and Agathocles in Sicily and Africa.
3724	281	A Roman legion seizes Rhegium by treachery.	The Carthaginians send the Romans aid, under Mago, against Pyrrhus.
3727	277		
3729	275	Hiero and Artemidorus are made supreme magistrates by the Syracusan troops.	
3736	268	Hiero is declared king by the Syracusans.	Beginning of the first Punic war with the Romans. It subsists twenty-four years.
3741	263	Appius Claudius goes to Sicily to aid the Mamertines against the Carthaginians. Hiero, who was at first against him, comes to an accommodation with him, and makes an alliance with the Romans.	The Romans besiege the Carthaginians in Agrigentum, and take the city, after a siege of seven months.
3743	261		Sea fight between the Romans and Carthaginians, near the coast of Myla.
3746	258		Sea fight near Ecnomus in Sicily.
			Regulus in Africa. He is taken prisoner.
3749	255		Xanthippus comes to the aid of the Carthaginians.
3750	254		Regulus is sent to Rome to propose the exchange of prisoners. At his return the Carthaginians put him to death with the most cruel torments.
3755	249		Siege of Lilybæum by the Romans.
3756	248		Defeat of the Carthaginians near the islands Ægates, followed by a treaty, that puts an end to the first Punic war.
3763	241	Hiero sends the Carthaginians aid against the foreign mercenaries.	

		Syracuse.	Carthage.
3763	241		War of Libya against the foreign mercenaries. It subsists three years and four months.
3767	237		The Carthaginians give up Sardinia to the Romans, and engage to pay them 1200 talents.
3776	225		Amilcar is killed in Spain. Asdrubal, his son-in-law succeeds him in the command of the army.
			Hannibal is sent into Spain upon the demand of his uncle Asdrubal.
3784	220		Asdrubal's death. Hannibal is made general of the army in his stead.
3786	218	Hiero goes to meet the consul Tib. Sempronius, in order to offer him his services against the Carthaginians.	Siege of Saguntum.
3787	217		Beginning of the second Punic war, which subsists seventeen years.
3788	216		Hannibal enters Italy, and gains the battle of Ticinus and Trebia.
			Battle of Thrasymenus.
			Hannibal deceives Fabius at the straits of Cassilinum.
3789	215	Death of Hiero. Hieronymus his grandson succeeds him.	Cn. Scipio defeats the Carthaginians in Spain.
		Hieronymus abandons the party of the Romans, and enters into an alliance with Hannibal. He is assassinated soon after. His death is followed with great troubles to Syracuse.	Battle of Cannæ. Hannibal retires to Capua after this battle.
3790	214		Asdrubal is beaten in Spain by the two Scipios.
3792	212	Marcellus takes Syracuse, after a siege of three years.	
<i>Carthage.</i>			
3793	211	The two Scipios are killed in Spain.	
		The Romans besiege Capua.	
3794	210	Hannibal advances to Rome and besieges it. The Romans soon after take Capua.	
3798	205	Asdrubal enters Italy. He is defeated by the consul Livius, whom the other consul Nero had joined.	
3799	203	Scipio makes himself master of all Spain. He is made consul the year following, and goes to Africa.	
3802	202	Hannibal is recalled to the aid of his country.	
3803	201	Interview of Hannibal and Scipio in Africa, followed by a bloody battle, in which the Romans gain a complete victory.	
3804	200	Treaty of peace between the Carthaginians and Romans, which puts an end to the second Punic war.	
		Fifty years elapsed between the end of the second and the beginning of the third Punic war.	
3810	194	Hannibal is made prætor of Carthage, and reforms the courts of justice and the finances. After having exercised that office two years, he retires to king Antiochus at Ephesus, whom he advises to carry the war into Italy.	
3813	191	Interview of Hannibal and Scipio at Ephesus.	
3816	189	Hannibal takes refuge in the island of Crete, to avoid being delivered up to the Romans.	
3820	184	Hannibal abandons the island of Crete, to take refuge with Prusias, king of Bithynia.	
3822	182	Death of Hannibal.	
3823	181	The Romans send commissioners into Africa, to decide the differences that arose between the Carthaginians and Masinissa.	
3843	156	Second embassy sent by the Romans into Africa, to make new inquiries into the differences subsisting between the Carthaginians and Masinissa.	
3855	149	Beginning of the third Punic war. It subsisted a little more than four years.	
3856	148	Carthage is besieged by the Romans.	
3858	146	Scipio the younger is made consul, and receives the command of the army before Carthage.	
3869	145	Scipio takes and entirely demolishes Carthage.

Tmolus mons, Lydia	Bouz Daghor the Cold Mountain	Zeuigma, or bridge of the Euphrates	Castle of Roumkala

THE above Table contains only the names of such regions and cities, &c. as are mentioned in this Edition of ROLLIN'S ANCIENT HISTORY—it does not therefore pretend to be a general Table of Ancient and Modern History.—The ancient political Divisions mentioned, are those which existed prior to the era of Roman conquest or Roman political nomenclature.—Many of the cities mentioned in ancient history have utterly perished, and left no traces of their past existence—these consequently it would have been useless to insert.—Of cities whose remains exist, those only are inserted whose sites have been clearly ascertained.—Such cities as have preserved their ancient names obviously did not require to be enumerated. In constructing a Table of this kind it is impossible to attain that degree of accuracy and fulness which could be wished. Even the best geographers are almost utterly ignorant of the great interior of the Asiatic peninsula—as also of the interior of Macedonia, Thessaly, Epirus, and Illyria—and until great political changes shall have laid these and other ancient countries open to the view of the learned and scientific traveller, every Table of this kind must of necessity be greatly defective.

GENERAL INDEX.

NOTE—The numerals refer to the Volume—the figures to the Page—the Articles marked N. will be found in the Notes.

ASANTIDAS makes himself tyrant of Sicily, ii. 84.
Achaia, king of Argos, i. 207.
Abdolonius is placed upon the throne of Sidon against his will, i. 545, his answer to Alexander, *ibid.*

Agia IV. son of Eudamidas, reigns at Sparta, ii. 89. he endeavours to revive the ancient institutions of Lycurgus, ib. he effects it in part, 90. &c. only Agislaus prevents the final execution of it. i. 89. 91. he is sent to aid the Achæans against the Ætolians, ib. on his return to Sparta he finds a total change there, 92. he is condemned to die, and executed, 93. &c.

Agonothete, a name given to those who presided in the public games of Greece, i. 224.

Agriculture, between that of the ancients had for it, especially in Egypt, i. 56. in Persia, 188. and in Sicily, 292.

Agri-nium. Foundation of that city, i. 318. it is subjected first by the Carthaginians, 82. and afterwards by the Romans, 89.

Agron, prince of Illyria, ii. 88.

Ahasuerus, name given by the Scriptures to Astyages, as also to Cambyses and Darius.—See the names of the last two.

Aluz, king of Judah, becomes vassal and tributary to Tig-lath-Pileser, i. 140.

Alceus, son of Perseus, king of Mycenæ, and father of Amphitryon, i. 207.

Alceus, Greek poet, i. 224.

Alexander, young Lacedæmonian, puts out one of Lycurgus's eyes, i. 214. he is afterwards being revenged on him, ib.

Alcetas, king of the Molossians, great grandfather both of Pyrrhus and Alexander the Great, i. 505.

Alcibiades. When very young he carries the prize of valour in the battle against the Pontians, 368. character of that Athenian, 314. his intimacy with Socrates, ib. his versatility of genius, 315. his passion for ruling alone, ib.—Alcibiades begins to attract notice at Athens, 316. his artifice for breaking the treaty with Sparta, ib. he engages the Athenians in the war with Sicily, 317. he is elected general with Nicias and Lamachus, 318. he is accused of having mutilated the statues of Mercury, 319. he sets out for Sicily, without having been able to bring that affair to a trial, ib. he takes Catana by surprise, 321. he is recalled by the Athenians to be tried, 322. he is, and is condemned to die for contumacy, ib. he retires to Sparta, ib. he debauches Timaea, the wife of Agis, and has a son by her, ib. he advises the Lacedæmonians to send Gylippus to the aid of Syracuse, 324.—Alcibiades retires to Tissaphernes, 324. his influence with that satrap, ib. his return to Athens is concerted, 326. he is recalled, 327. he beats the Lacedæmonian fleet, ib. he goes to Tissaphernes, who causes him to be seized and carried prisoner to Sardis, ib. he escapes out of prison, ib. he defeats Mindarus and Pharnabazus by sea and land the same day, ib. he returns to Athens, 328. he is declared a generalissimo, ib. he causes the great mysteries to be celebrated, 331. he sets sail with the fleet, ib. Thrasybulus accuses him at Athens of having occasioned the defeat of the fleet near Ephesus, 340. the command is taken from him, ib. he comes to the Athenian generals at Egospotami, 344. the advice he gives them, ib. he retires into the province of Pharnabazus, 348. that satrap causes him to be assassinated, ib. his character, 349.

Alcibiades, one of the Spartan exiles, is reinstated by the Achæans, and sent deputy to Rome with complaints against them, ii. 177. the Achæans condemn him to die, 178. they soon alter annual that sentence, 179.

Alcimus is placed at the head of Demetrius Soter's army against the Jews, i. 249.

Alcmon, i. 219.

Alcmonides expelled Athens by Pistratus, i. 220. they take upon themselves the care of building the new temple of Delphi, 221. their aim in that design, ib.

Alcyoneus, son of Antigonus, carries the head of Pyrrhus to his father, ii. 73.

Alexamenus is sent by the Ætolians to seize Sparta, ii. 156. his avarice occasions the miscarriage of that design, ib. he is killed in Sparta, ib.

Alexander I. son of Amyntas I. king of Macedonia, avenges the affront his mother and sisters had received from the Persian ambassadors, i. 247. he makes proposals of peace to the Athenians from the Persians, 251. he gives the Greeks intelligence of the designs on the Persians, 262.

Alexander II. son of Amyntas II. reigns in Macedonia, and dies at the end of one year, i. 460.

Alexander III. surnamed the Great, son of Philip. His birth, i. 305. happy inclinations of that prince, 327. he has Aristotle for his preceptor, 328. Alexander's esteem and affection for that philosopher, ib. he breaks Bucephalus, 329.—Alexander ascends the throne of Macedonia, ib. he reduces and subverts the people bordering upon his kingdom, who had revolted, 330. he enters Greece to dissolve the league which had been formed against him, ib. his rapid march an eminent instance of his promptitude and vigour, ib. N. he defeats the Thebans in a great battle, ib. and takes their city, which he destroys, 331. he pardons the Athenians, ib. he sends his ambassador, ib. and causes himself to be declared generalissimo of the Greeks against the Persians, ib. he returns into Macedonia, 332. and makes preparations for his expedition against the Persians, 333. he appoints Antipater to govern Macedonia in his victory, ib.—Alexander sets out for Asia, ib. he arrives at Ilion, where he renders great honours to the memory of Achilles, ib. he passes the Bosphorus, and gains a great victory over the Persians, 334. he besieges and takes Miletus, 335. then Halicarnassus, ib. and conquers almost all Asia Minor, ib. by Amerta, Paphlagonia, Bala, and Mount Taurus to Cilicia, ib. he takes the city of Gordium, where he cuts the famous Gordian knot, 336. he passes the straits of Cilicia, ib. he arrives at Tarsus, where he has a dangerous illness occasioned by drinking in the river Cydnus, 337. he is cured of it in a few days, ib. he marches against Darius, and gains a famous victory: over that prince near Issus, 342. &c. tired with pursuing Darius, he comes to that prince's camp, which his troops had just before seized, 342. Alexander's humanity and clemency towards his enemies is shown in the five provinces, ib.—Alexander enters Syria, 343. the treasures laid up in Damascus are delivered to him, ib. Darius writes him a letter in the most haughty terms, 344. he answers it in the same style, ib. the city of Sidon opens its gates to him, ib. he beats near Tyre, 345. &c. after a long siege he takes that place by storm, 348. he receives a second letter from Darius, 351. he marches to Jerusalem, in honour paid by him to the high priest Jaddus, 352. he enters Jerusalem and offers sacrifices there, ib. Daniel's prophecies relating to him are shown him, ib. he grants great privileges to the Jews, 354. and refuses

the same to the Samaritans, ib. he besieges and takes Gaza, ib. enters Egypt, ib. makes himself master of it, ib. and begins to build Alexandria, 355. he goes into Libya, ib. visits the temple of Jupiter Ammon, 356. and causes himself to be declared the son of that god, ib. he returns to Egypt, ib.—Alexander's return to Egypt, resolves to leave against Darius, 357. on setting out, he is informed of the death of that prince's wife, ib. he causes her to be interred with great magnificence, 357. he passes the Euphrates, ib. then the Tigris, ib. he comes up with Darius and gains a great battle, near Arbela, 359. he takes Arbela, 360. Baby. ib. he takes Susa, 365. subdues the Uxii, 363. &c. besieges the pass of Susa, ib. arrives at Persepolis, of which he makes himself master, ib. &c. and burns the palace of that city in a drunken frolic, 364.—Alexander pursues Darius, 365. Bessus's treatment of Darius, makes him hasten his march, ib. Alexander's grief on seeing the body of Darius, who had just before expired, 366. he sends it to Sisigambis, ib. he marches against Bessus, 368. Thalestris, queen of the Amazons, comes from a remote country to see him, ib. he abandons himself to pleasure and excess, 369. he continues his march against Bessus, 370. he puts Philotas to death upon suspicion of having entered into a conspiracy against him, 371. and Parmenio, his father, 372. he subdues several nations, ib. he arrives in Bactria, ib.

ib. Bessus is brought to him, ib.—Alexander takes many cities in Bactria, 373. &c. and builds one near the Iaxartes, to which he gives his name, ib. he marches against the Sogdians, who had revolted, and destroyed many of their cities, ib. he enters Ecbatana, ib. he marries Roxane, the daughter of his ordinary freedom, 374. he passes the Iaxartes, ib. gains a victory over the Scythians, ib. and treats the conquered favourably, 375. he quells a revolt of the Sogdians, ib. he sends Bessus to Ecbatana to be punished, ib. &c. he takes the city of Ictra, 376. he abandons himself to the pleasure of hunting, in which he is in great danger, ib. he gives Citus the command of the provinces which had formerly been under Artabazus, ib. he invites that officer to a feast, and kills him, ib. &c. he undertakes various expeditions, 378. he enters the Indus, and conquers the Yarys, ib. he resolves to march into India, and makes preparations for setting out, ib. he endeavours to make his courtiers adore him after the Persian manner, ib. he puts the philosopher Euthydemus to death, 379.—Alexander sets out for India, 380. he takes many cities, where he has seemed imprudent, and frequently endangers his life, 382. &c. he grants Taxillus his protection, ib. he passes the river Indus, 383. and then the Hydaspes, ib. and gains a famous victory over Porus, 384. he enters the province of Gandaria, ib. he sends his general Bucephalus, ib. he advances into India, and subverts many nations, ib. he forms the design of penetrating as far as the Ganges, 386. general murmur of his army, ib. he renounces that design, and gives orders to prepare for returning, 387. excited by the murmur of his army, he shows himself to the gods, 388.—Alexander sets out on his march to the ocean, ib. is in extreme danger at the city of the Oxadræ, 389. he subdues all he meets in his way, ib. arrives at the ocean, 390. prepares for the return to Europe, ib. he equips his army, ib. he passes through Carmania, ib. he arrives at Passagardia, 391. he is rendered by him to the ashes of Cyrus, ib. he puts Orsine, satrap of the province, to death, 392. he marries Statira, the daughter of Darius, ib. he pays the debts of his soldiers, ib. he appoints a military arrangement to him, 393. &c. he renews Artabazus, and substitutes Craterus in his stead, 394. his grief for Hephæstion's death, ib. &c. he conquers the Cosseans, ib.—Alexander enters Babylon, without heeding the sinister predictions of the Magi and other soothsayers, ib. he celebrates Hephæstion's funeral, with extraordinary magnificence, 395. he forms various designs of expeditions and conquests, 396. he sets people at work upon repairing the banks of the Euphrates, ib. and rebuilding the temple of Belus, 397. he abandons himself to excess, and is killed by a snake, 398. he is buried in the city of his funeral, ii. 17. his body is carried to Alexandria, 18. judgment to be passed on Alexander, i. 398. character of that prince, ib. &c. Daniel's prophecies concerning Alexander, 332. &c.

Alexander, son of Alexander the Great, is elected king, ii. 12. Cassander first deprives that prince of the sovereignty, 27. then puts him to death, 35.

Alexander, son of Cassander, disputes the crown of Macedonia with his brother Antipater, ii. 30. he is killed by Demetrius, who is called to him, 31.

Alexander I. king of Epirus, marries Cleopatra, daughter of Philip, king of Macedonia, i. 323.
